Hallo,

Lekker in het Nederlands. Gezeocht een 3030 sloopset. Heb een 3030 met een akelige fout waardoor hij niet wilt zenden. Daarom zoek ik er een die als model kan dienen of waar ik mijn inhoud in kan bouwen.

Groeten Frans de Rooij

> These guy's were laughing to hard to answer but threw in a D-104 for free???

Remember Borden's Elsie the Cow? She was a Jersey. They're smaller
than most milk cows, give less milk, but their butterfat content is
so high that after drinking a glass of their (raw) milk, you'll think
that you just let a tablespoon of butter melt in your mouth. A dairy
will pay dairymen a premium price for their product, as the milk makes
delicious ice cream.

I don't know what this has to do with r.r.a.b, but now you know about
Jersey milkcows.

6. Re: Gibson Girl information.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-01 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <377BD5B6.A7967F13@erols.com>
Source record: 82495

The Gibson Girl transmitter used an internal and fairly small, one-handle generator. The one you talk of has been correctly identified as that from the Angry-9 or the BC-1306 and employs a 3-legged seat arrangement.. Check the connector, if its got a circular array of pins and they're of the banana-type, it fits the cable for the 1306 or the GRC-9.

12. Sell/Swap: Genrad 1203-B PS & 1215-B OSC

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-01 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <7lh22s$9st$1@nntp3.atl.mindspring.net>
Source record: 82501

Hi,

19" Rack Mount combo unit:

UNIT POWER SUPPLY
General Radio 1203-B
115 VAC input - 6.3VAC @ 3A out - 300 VDC @ 50MA out

UNIT OSCILLATOR S/N 2116
General Radio 1215-B
50-250 MEGACYCLES

Both pieces can be removed from rack, and have rubber feet for
desk/counter top use. Power Supply is operable. Oscillator has
a pass-thru cap that I destroyed when I inserted the probe incorrectly,
and is inoperable

I have been unable to ID the part, and would like to see someone get
some use out of the power supply and rack mount. I have been unable to
locate the probe since it was packed away in another location.

Thr Rack Panel is a stock option, and the paint and overall condition of all
3 pieced is well above average, with the exception of a visable scratch on
the
front of the power supply.

I see the oscillators listed often, but seldom see the power supply or rack
panel,
so I am at a loss at what to ask for this.

Any offers or suggestions?

Reply via E-mail or the News Group...

Thanks,

David KD4NUE

Hello Rich;

Try 1-800-258-7805. They are closing out the analyzer and this may be you last chance to pick up accessories.

Just one more bit of news, I have also added T and Pi attenuator calculators to the radio calculations page. Both are even calculated in both unballanced and ballanced forms.

This was published (in print) about 25 years ago in a Surplus Conversion
Manual by 73 Magazine or CQ Magazine. Maybe from a large library or the
magazine? Maybe one of the Boatanchorites still has one.

Also try Fair Radio Sales in Lima Ohio.

Randy,

>A coworker showed up with a crank generator like the one the "Gibson
>Girl" used for power. Can anyone tell me where I can find an "online"
>manual for the generator alone? Then number is:
>GN-58-A-GY
Not sure about an online manual. But this generator was used with the Radio Set SCR-694-C (AKA BC1306) or its successor AN/GRC9. The 1306 is of WW2 vintage, the GRC9 was made after the war and is around in American, French and German versions. There is a schematic somewhere on the inside of the cover, if I remember correctly. The year of its origin would tell whether it was used with the 1306 or a GRC9.

As far as I know, tehre is no seperate manual for the GN-58: it is covered in the respective manuals of the Radio Sets.

It is easy to crank - as long as you don't transmit. The moment you hit the TX button, you get respect for the lads out in the field actually using it!

Hope this helps.
Bart.

There may be a 'NOSPAM.' in front of my E-mail address.
It is there to fool machines, not people.

43. Re: Gibson Girl information.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-02 00:00:00 UTC
From: oceanradio@aol.com
Message-ID: <19990701211002.19045.00000716@ng-co1.aol.com>
Source record: 82508

I had to leave for a ship activation so may have missed a message on this subject, but I didn't see anything that mentioned how the Gibson Girl got its name.
There's a big difference between the Gibson Girl and the lifeboat radios carried by ships. Anyone who has ever installed one in a lifeboat (I have, many times) knows that to use it effectively, you must lash it down in the lifeboat very thoroughly. When the radio is cranked, if it twists you have difficulty cranking it. There were big straps for lashing it and you tried to position it where you could lash it to one of the lifeboat thwarts.
That's something you couldn't do in the inflatable life rafts used by flyers. Therefor the Gibson Girl was designed to be held between the knees of the guy doing the cranking. Hence the "hour glass" shape of the radio. People a lot older than I am remember pictures of women by an artist named Gibson, all of them with hour-glass figures and fancy clothes. Hence the name.
I hope this isn't repeating something somebody already explained; if so, I'm sorry.

47. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7Ih89f$phj@news.Hawaii.Edu>
Source record: 82512
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

50. Yaesu HF station value?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-02 00:00:00 UTC
From: kb8wcq@tir.com
Message-ID: <377d3ca6.22527883@news.tir.com>
Source record: 82515

Hi all,

I've been asked to help appraise the value of a complete Yaesu FT301D HF station for possible sale. The setup includes the following pieces:

Transceiver FT-301D
AC power supply FP-301D
External VFO FV-301
Monitor Scope YO-301
Antenna Tuner FC-301

Also included is the matching phone patch LL-301 and wall mounted relay box for the FT-301. The relay box controls the interconnection between the transceiver, monitor scope, phone patch and linear amp (not included). The equipment appears to be in good condition, although it's probably been out of use for a year or more. Any assistance or advise on the value of this equipment is greatly appreciated.

Thanks,
Alan Harriman kb8wcq
Rochester, Michigan

BTW,

Good Rig!

In late 1977 I bought a similar station, used it successfully for a long time, and finally sold it at a hamfest a few years ago.

I still have the FC-301 matchbox-swr-power meter and desk mike.

Hard to guess current market value, but a ball park number is $500.00
For highest dollar return, though, nothing beats listing on Ebay with a high "reserve"

Look inside and see what a solidly built rig that is, with its pull out sections...you'll probably want to keep it yourself!

Good Luck,

Plum

From: pself2@aol.com
Message-ID: <7lijdgdid1@nnrp1.deja.com>
Source record: 82527

For Sale:

Hallicrafters SX-28 Super Skyrider.

A little dusty but in vgc. Front panel and controls would probably clean up to be in near mint condition. It is a 'tabletop' model with the heavy case/flip up top. Chrome trim on sides is a little worn...somebody mounted, and removed, a switch on the right front corner of the top panel (not the lid, just to the right of it) then removed it, leaving a small hole & screw holes.. inside the unit needs cleaning. I have not tested or cleaned the inside for fear of damaging something. Works, according to previous owner, but has been in storage for years.

Asking $200, plus shipping from 59601.

Email with questions, etc. Thanks very much! -peter-

Hi,

I have the following excess gear. I can provide further info to anyone
interested.

General Radio Rack Mount Power Supply and Oscillator
(1203-B Power supply 1215-B Oscillator)

2 DX 400 realistic sw portables - need repair

6 equotox gas detectors with batteries and 5 chargers
(Some Batteries need replacing, Need recalibration, latest
calibration date 1997)

3 GE MPX handhelds, 2 batteries, 2 chargers (UHF)
(Batteries won't keep a charge, One Charger Inop)

2 motorola ht500 HTs, 2 chargers, 4 batteries

Lafayette he35 6m rig with lafayette hand mic and power cable
(Meter not original)

Lafayette he45 6m am rig with manual and power cord

2 Gonset Communicator III with ac power cords

1 Gonset GC-105 2m AM with ac power cord

Unimetrics multi-band portable with DF rotating antenna

2 Multiband portables with rotating df antenna Radio Shack 12-649 equiv

Precise 630 RF-AF and TV Marker and Bar Generator
Needs to be re-capped

3 Plectron VHF Hiband monitor receivers (R8200 series)

1 Plectron VHF Loband monitor receiver

Houston instrument Pen Plotter Model DMP-29
(can't find drivers)

Hitachi Hicomscann graphics tablet Model HDG1111B
(Cant find drivers)

VHF Marine Band Radios
Various; mostly xtal rigs- good for rf parts

Also have various relays and industrial control items including
TDR's (time delay relays) PLDs by Watlow, variable frequency
ac controllers with options (NIB), Allen Bradley programming terminal
with keyboard templates, Large quantity of plug in relays and some sockets.

Interested in monitoring gear, PIC or BASIC stamp items, antenna tuner to
use
with DX70T Alinco, Working solid state test gear, digital camera, scanners,
SWL receivers, most anything electronic that pertains to ham radio or
monitoring.

Sorry for the brevity in the listing, I am trying to conserve a little
bandwidth and
loading time for the NGs.

Thanks for Reading,

David KD4NUE

74. TR-4 and Sideband question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-02 00:00:00 UTC
From: "D.Pearce" <depearce@netscape.net>
Message-ID: <377D08A3.2BD5EE27@netscape.net>
Source record: 82539

I recently aquired a TR-4, no C or CWrit, without a manual. Problem is, with the sideband/cw switch set to sideband I cannot understand any sideband conversations. AM signals are readable. With ssb/cw switch set to CW, sideband signals are easily readable. I tried adjusting C130 at the back of the set. While it changes the tone, SSB is still unreadable at the SSB setting.

Is the sideband filter for that side not working? Any suggestions if it is working what else might be wrong?

I am replacing all the Caps in the power supply. Bias is set to 60V.

Help!

Looking for a Manual... user and/or service or whatever...

Hey all, Need a hand identifying/using a Motorola signal generator. Looks to be about 60's vintage.. I NEED A MANUAL!!! please....
plate on top says:

Manufactured for Motorola, Inc

MEASUREMENTS
A McGraw-Edison Division
Boonton New Jersey
Model: T-1034-C serial: 5480

Goes about 24-900 MHz ext./cw/1000Hz tone/incr.
and has seperate I.F. generator, inputs... has output deviation meter and adjustment.

Anyone got any ideas? Does Moto still have literature on this boatanchor?
It works fine and seems to be the rx tuning half of today's service monitors. Breaks my maxtrac squelch at .2mV using 2:1 pad... ?
thanks,
Randy

From: cccacutts@mindspring.com
Message-ID: <7ljuvh$u73$1@nntp2.atl.mindspring.net>
Source record: 82551

Guys,

I've got a National rack mount speaker and I need to know it's impedance. There is no indication on the speaker itself. Is there a method of finding this out? What are the pro and cons of just hooking it up to a receiver with a 8 ohm output or a 600 ohm output to see which sound best. I could use some help on this one.

It also would be nice to know which 88 set we are talking about. The
RAF HF receiver or the manpack transceiver.

Cheers

Robin

Allen
If there is a transformer with the speaker its probably suitable for 600 ohm output. If there is no transformer its probably 3 or 8 ohms.

Source record: 82562

I have an RME 69 Shotwave Receiver, matching DB-20 Preselector, and matching Speaker.

It all works, and I have the original (but time-worn) users documentation.

I want to trade it for Ham Gear:

Collins 75A_, 75S_, 32S_
Military R388, 51J4
National NC-303
Drake 2B/2BQ
Davco, Squires Sanders,

Or might sell outright for best offer.

The gray paint has worn to a black primer near the volume knob on the radio, and on the top of the preselector.

Jeff Bauman

101. National Select-O-Ject question.....

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-03 00:00:00 UTC
From: nc183d@aol.com
Message-ID: <19990703093636.14832.00002692@ng-fi1.aol.com>
Source record: 82566

Hi All,
I have just picked up a National Select-O-Ject and I am wondering if anyone out there has used one of these on their Nationals. If so, what models will it work in conjunction with? I have visited the National site and seen that it should work with the NC173 and NC183, now I wondering if it will also work with the NC183D and perhaps the NC57, maybe the NC2-40-D? In addition, if anyone has used one of these, what were your results? Did it work only with CW signals, or will it also work well on SW?
Please respond directly to me at: nc183d@aol.com
Thanks,
Mark S.

From: Bob Maser <w6tr@mindspring.com>
Message-ID: <7llmreeir1@nntp4.atl.mindspring.net>
Source record: 82576

Have a Hallicrafter HT37 and a HT41 for sale. both are complete and in great condition. The 37 is missing the correct knob for the driver tune. It also has a cracked skirt on the QSY knob. It has full output on all bands and the alignment seems OK. Sounds good into a receiver monitor on both sidebands. Serial# 199246F. The previous owner repainted the cabinets. He restores Collins for a hobby and he did a nice job on these. Are they the correct color? Your guess is as good as mine. They are medium gray.

The HT41 is at least a 9. The finals appear good as the amp puts out 600W. Serial# is 732010 and the labels are still intact on the back of the rig. The 37 even still has the warning tag attached to the final tune shaft.

I would like to get $225 for each. Call me at 909-789-4110.

Bob W6TR

JEP:

Maybe it's just one more way to cross-check a guy for legitimacy. It's a bit reassuring to see that someone has taken the effort to get their ticket. (Although that rationale has lessened in recent years.) Possibly it just helps to put a human accent on an otherwise faceless transaction.

Thanks for taking a look!
Many books and manuals- many hard-to-find.
Something for just about
every collector. More added daily.
Below list is a sample.
I've just uploaded a couple of callbooks, a rare National manual, etc.
Please click on the links or search for Ebay seller arc5.

Thanks again.

I have both of the RCA WR-51A and WR-52A Stereo FM Signal Simulators but have no users manual for either. If you have one of these, I would appreciate a copy and of course will reimburse any copying and shipping costs. Or would buy your original if you have one to sell.

Thanks,

Rick

Hi John
Thanks for the information and the url for the npr audio file. Very
interesting.
I worked Keel on 40 meters in the Mother Tongue - American Morse.
Lots of younger guys are missing out on a great code. It's lots of fun and
still active on 40 meters.

125. WTB: old vector spring clips and perfboard

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-04 00:00:00 UTC
From: Dan Stanger <dxs@diac.com>
Message-ID: <FWzf3.1512$F42.4761@newsfeed.slurp.net>
Source record: 82441

i would like to buy some vector spring type terminals and perf board.
i would prefer the perfboard that has holes .25 on centers and large
holes. i think they are .09 or thereabouts. the spring terminals
fit into the holes in the perfbord and have a slot in them. the
spring covers the slot and holds the parts in. i would prefer new
spring terminals but used ones are ok too. a source for these would
also be good.
thanks,
dan stanger

126. FS: (4) NOS GE 2C39A tubes, 5 used same

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-04 00:00:00 UTC
From: pself2@aol.com
Message-ID: <7lmv96$m0c$1@nnrp1.deja.com>
Source record: 82442

For sale,

4 NOS GE 2c39A tubes still sealed in thick 'bag' in orig. boxes.

Also 5 used of the same, untested, but likely bad as they look a bit scorched.. but maybe not...

Asking $35 each for the NOS tubes, plus shipping. Buy all 4 NOS tubes and I'll send you the entire lot of 9 tubes.

More transmitting tubes to come... stay tuned. Email with any questions..

thanks,

-pete-

In the UK it is worth between 50 and 75 UKP whatever that is in USD.
However I think they are more common over here. I have an 88D which
doesn't have the LF band that you have but they are nice sets.

Cheers

Robin

Hi there, does anyone know of any windows based games that can be played with another player via packet radio?

If so, I would be very gratefull if you can email me at the following address:

ALLAN@MM1BJP.FREESERVE.CO.UK

I hope someone can be of some assistance to me!

73's for now!

Allan - MM1BJP

Yves:

Take a look at:
http://www.falls.igs.net/~testequipment/index.html

I have bought tubes from them before while in the area. Selection includes
both new and used tubes.

From: jpevner@aol.com
Message-ID: <19990704162735.23150.00010063@ng-bh1.aol.com>
Source record: 82455

Recently recapped, electrically very good. Appearance sharp also. Has added aftermarket crystal cal with switch added to front. Since the switch was symmetric to the headphone jack, and the mod was useful, I left it alone. Has replacement tuning knobs (very common) and some mods were reversed, but left some holes on rear apron.

$150 + shipping from Mass.

Source record: 82457

I have the following variable capacitors for sale. Shipping (from 19082) is not included. Prices shown are asking prices only - make offer on one or all.

Cardwell JP-48-GD - This is a split stator variable, 48 pF max. per section. 7 rotor and 6 stator plates per section, .070" spacing. Ceramic and micalex insulation, end plates are ceramic. 3" high, 2-1/4" wide, 6" deep, with 1/4" shaft extending 3/4" from one end. Used, good condition. Shipping weight 1 pound. Asking $7.

Cardwell 7103 - This is a single section variable, 150 pF max. per section. 20 rotor and 19 stator plates, .070" spacing. Ceramic insulation, end plates are metal. 2-5/8" high, 2-1/2" wide, 6-1/2" deep, with 1/4" shaft extending 3/4" from one end. Have two identical units - one NOS in original box, one used, good condition. Shipping weight 1 pound. Asking $10 for new one and $8 for used one.

Capacitor from WW2 frequency meter - This is the precision variable capacitor from the BC-221/LM frequency meters. The best dial drive/capacitor combination you will ever encounter. It is the style that mounts to the chassis, not the panel. Approximately 220 pF. Has built in high precision 100:1 reduction drive (50 turns to cover the capcitance range) with antibacklash geaing. Heavy cast metal construction, glass insulation. Have 3 units, all used in good condition. Shipping weight 3 pounds. Asking $10 each.

Too many projects and moving to a new QTH have made me decide to get rid of a few more BA's. These Hallicrafters radios are in good condition - the S-53A receiver seems to be sensitive and works well. The HT-18 has a missing power cord - it hasn't been tried out but appears to be in good condition too. All have original knobs and switches and no known modifications. $135 plus shipping for the pair.

Hello to all,

I need the relay for the Viking Valiant which activates the HV transformer primary. I believe is is a 115-120 VDC.

Please let me know if you have one to spare or know of where I can find one.

Thanks, and 73's
Bill Gittere K2LNU

From: Joel Levine <joelbmh@worldnet.att.net>
Message-ID: <7lrairmbg1@bgtnsc02.worldnet.att.net>
Source record: 82401

Gary:

Good luck in finding a VFO but in all honesty, it is you who is not realistic.

First of all, Command sets no longer sell for $5. More typically $25-$50 now so your prices belong with the 15 cent ice cream pop.

Secondly, the 20A is a very common transmitter and many are available so the price is low. The VFO is much rarer as many of the hams of that period did not have the extra money to spend. Today a VFO (312B5) for a KWM-2 sells for more than the KMW-2. Thats supply and demand

182. Yaesu FT 101 - looking for info

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-05 00:00:00 UTC
From: Dave/n1yvv <davidocame@snet.net>
Message-ID: <7lrfjo$3iu@news1.snet.net>
Source record: 82404

Hi to all,

I am looking for anyone who knows something about the Yeasu FT 101 EX model. All bands are working great except for 10 meters which will only put out between 3-5 watts (125-150 max. on all other bands).

I have both the Operator's and the Service manuals. Neither of them address this issue. The Service manual does say 'input' to the finals is about 260 watts on all bands (a little less on 10m in parentheses:), so I, of course, do not expect that from the output. But, I didn't expect THAT much less on 10m.

Can anybody help?

Thanks and 73!

Dave

I have a properly working full output factory wired Heath SB200
Amplifier rated 1200 W input with manual & dummy load.
Covers 80 40 20 15 10 meter bands.

The box is in fine condition for its age and the front panel is a ten.
No modifications inside or out. Unit is presently wired for 110 volts;
very simple change to tie strip for 220 volts.

Prefer pickup or drive half way to meet.
Amplifier alone is #41 plus shipping box(es) from 15845.

I'd like a thousand bucks (who wouldn't?), but I'll take $300.00

If interested, please e-mail direct.

Thanks,

Bob

I have thirteen new in the box 5Y3GT rectifier tubes that are being sold as a lot at $28. This breaks down to $2 per tube and $2 for shipping within the lower 48. All of the tubes have been checked on my Hickok 539C tube tester. Eight of the tubes are GEs, four are Sylvanias, and one is a Zenith.

198. VFO for CE 20-A?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-05 00:00:00 UTC
From: Gary - KJ6Q <davison7@gte.net>
Message-ID: <MQ5g3.288$ih6.14964@dfiatx1-snr1.gtei.net>
Source record: 82489

Still looking for BC-458/ARC5 VFO for my CE 20-A, preferably one employing the CE kit w/new matching front panel and cabinet.

FOR the record, my 20-A, in perfect condition is only a nostalgic (but operational) conversation piece to be used rarely - it was bought for $40, so it SHOULD be obvious that spending several times as much for a VFO alone is out of the question... I'm hoping to find what I want for about the same price I paid for the 20-A itself.

If someone with that VFO *REALLY* feels their VFO is worth gold, perhaps I could interest them in an equally gold-clad 20-A for a mere $600?

Sorry to sound grinchy - but the several responses from opportunists sensing a "sucker", and demanding as much as $175 for a converted $5 command transmitter (BC-458/ARC5) sorta turns me off...

Any REALISTIC sellers out there?

Gary - KJ6Q

Do they say "anything" about the oscillator coil? The Antenna, Mixer, or Drive coils? Low output on one band probably indicates the need to align that band's associated coils.

The command set VFO for the CE 20-A *AIN'T* no Collins - NOR worth
holdup prices!

Thats supply and demand
>
>73
>
>Joel WB2BMH
>
>

Folks are certainly entitled to ASK what they want for a piece they want
to sell - it's then up to the prospective buyer to decide if it's worth
the asking price to HIM...

MY gripe, is that a piece that is considered worthless JUNK by its
owner, and is merely wasting space in an attic or garage INSTANTLY
becomes GOLD when he is confronted with someone interested in it... This
ISN'T Collins stuff - NOR is this particular era of Central Electronics
stuff in any demand - it's USLESS, other than minor nostalgia purposes
to a VERY select few like myself - *I* wouldn't consider the CE VFO to
be worth any more at best, than a Johnson 122 or Heathkit VFO, and THOSE
sell well under $50 at local swap meets.

OH, yeah - I've seen a fair number of unmodified command sets STILL selling for around 5-10 bucks at swapmeets, too, NOBODY wants THEM, either!

For MY purpose, I'll POSSIBLY spend up to $40 or so for a 20-A VFO meeting my expectations - it's REALLY no big deal to me whether I actually find one or not, and all those now considered so "valuable" to their present speculator/owners can just continue to fall apart in rust, dust and disuse on that garage shelf for all *I* care - but perhaps a REALISTIC individual will surface that is more interested in actually finding a home for one at a reasonable price, rather than ripping off a sucker...

If I was REALLY interested in just getting this thing going, a few bucks worth of Radio Shack transistors and miscellaneous will get the job done, and LOTS more efficiently than the command sets ever did!

Like the saying goes. I was born at night, but not LAST night!

Hi Boatanchor Fans,
A couple of weeks ago I bought a Heathkit handitester at a hamfest. This little meter does not have a model number on it. It is in really good shape but the meter movement does not work. I got it because this is the same multimeter I had when I was a kid and I must recreate my youth. I would like to know if anyone has a handitester with a good meter movement that they would part with. The condition of the rest of the meter does not matter.
Thanks,
Bill Gittere K2LNU

Hi Guys;
Heres an interesting QRP xcvr, one of TenTec's first, the PM-3A, covers 40/20 meters and works. Here the URL with picture>>
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=127030695
Only at about $43 so far es closes on sunday
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

Dave,

Did you get the help you needed? Could be that this 101EX has been
retuned for 11 meters in that band position. The 10 meter crystal may
have been reinstalled but not realigned after. I have an EX that I
have had for over 20 years.

73,

Rick

I have forsale the following items

Drake R4-a receiver ; excellent electrical condition, an 8 in appearance with some minor scuff marks and light scratches.with copy of manual. $200 shipped in u.s.

Drake MN-2000 tuner in excellent operating condition, an 8.5 to 9 with some light scrathes on side of cabinet.have original manual. later tuner without silver outline on face. $225 shipped in u.s.

Heathkit DX-100 am/cw transmitter works well and looks nice,have copy of manual from w7fg manuals.this is a pickup only item in Phila. $150

Johnson Pacemaker ssb/am/cw transmitter in good condition,no dents in cabinet but could use repaint.original manual and also has all screws including the 4 long ones for the front panel. paint missing from edges of face but front panel nice with all lettering. all original knobs but one(audio) but I have been trying to get one.this is pickup only in Phila. $180 if serious could ship but it would cost about $50-$60

Johnson 275w Matchbox in excellent electrical condition with copy of manual.missing some paint on top of cabinet,also has two extra so239 on back panel but done nicely.one input and one output.input bypass's relay output for coax antenna. $110 shipped in u.s.

Mike:

I have an NCL-2000 as well, and have also experienced tube problems which were caused by the previous owner. You might contact Carl, KM1H for some very interesting points on the amplifier that are well worth considering when you do locate the tubes. Balance between the tubes is very important and if you just grab any old pair of 8122's and install them, you will have the same problem all over again quite quickly.....read expensive and frustrating!

I am very slowly changing the bias supply to be able to control the bias to each tube independently, thereby allowing "just any old 8122" to be used without the risk of burning the "weaker one" out after you have installed it. If I remember correctly, the tubes must be balanced within 1 volt of each other or you will have one tube doing all the work, and the other loafing along. It doesn't take long to fry the "good" tube under that situation.

Hope this helps, the NCL-2000 is a nice amp with a few modifications, and can put out a real bag of power.

Carl was an employee of National at the time the amplifier was designed and built, and I have found him to be quite helpful.

Carl's email is:
km1h@juno.com

From: Jim Allen <jim_allen@hp.com>
Message-ID: <378370C5.13F5@hp.com>
Source record: 82357

The ongoing saga of the Globe 400C continues!

I'm in need of a choke for the power supply for the Globe King 400C. It's rated at 8H at 300ma (about 80 ohms resistance). It needs to handle 1400V. It's the typical metal enclosed black job mounted with 4 tabs at the bottom with the wiring coming out of a hole in the bottom. It's about 3 3/4" by 3 3/4" and about 4 1/2" high.

A 6H or 10H at 300ma or higher would probably work (just as long as it doesn't get too big).

Best Regards,

Jim

I've got an old Model 360AT (or it could be 350AT) millitary transceiver that was produced by the Jefferson-Travis Radio Manufacturing Co.

It needs a power supply. If I could find one for a resonable (read cheep) price I'd probably keep the radio but if not I'd like to sell it. It has had some mods to it but not any thing that interferes with it's operation. I know it has not been fired up for about 25 years but it should be perfectly restorable. On a scale of one to ten I'd give it a 7. Does any one know what this kind of radio would go for?

Well, looks like the gods are good to me after all! My friend Todd goes out "shopping" on"junk" day arouind here in central NJ...Todd came to my door telling me about this HUGE radio ready to meet the jaws of a big, smelly garbage truck.
Joe jups up, pulls his boots on and races to the scene...The truck is literally 2 blocks away and closing fast...with a push of the "open trunk" button and a mighty
tug, Joe pops it in and flees the scene....it's all original,COMPLETE even right down to the Hallicrafters tubes! Missing the power cord, though...do you think it will be cheating to install a triple lead, grounded cord? Also the chassis is in need of a good, general cleansing...I'll be going through the caps one by one, then fire it up on a Variac to be sure...any tips/ experiences with this soon-to-be fine radio again? I also have the schematic, and manual!
Cheers, I hope you all are as lucky as I was yesterday.....73...Joe Pratt, Tubecntral@aol.com

257. Wanted: W1BQ or 1BQ QSL

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-08 00:00:00 UTC
From: Scott Oakland <soakland@home.com>
Message-ID: <378521A1.97D194F@home.com>
Source record: 82293
Body handling: Binary attachment payload not displayed: soakland.vcf

Hello, I am looking for anyone who may have the following QSL card in
their collection that either they could scan or part with:

1BQ - circa 1920
W1BQ - any year 1929-1998

Any help would be appreciated! Please email me.

Thanks,
Scott

I have not restored an SX-62, but I understand that it is electronically similar to the earlier SX-42. The SX-42 is prone to carbon buildup and arcing on the bandswitch and tone control switch. Paper capacitors leak and admit high voltage to the switches, causing Evil Results.

I would be sure to replace all paper caps on those switches and check for any signs of arcing across contacts. For what it's worth, you can find some SX-42 restoration notes on this web page:

http://antiqueradio.org/halli07.htm

Phil
philnelson@antiqueradio.org

P.S. Congratulations on your find. Your neighborhood has much higher-class junk than mine!

listed more or less by year of manufacture...

Stewart Warner 345 TRF (1926) outside good, inside immaculate w/all tubes $200

RCA Radiola 18 TRF (1927) good looking wood cabinet w/all tubes and copy of service manual. $150

Several Atwater Kent model 40 TRF's (1928) ranging from abysmal to perhaps... functional condition $50 - $150 ea

Atwater Kent Model 38 TRF

Hallicrafters S-38 (1950?) non-original knobs, missing phone jack, a couple of holes drilled in the top & bottom of the case to adjust the IF xformers and padders without opening up the radio. With hand drawn schematic. Working! $65

Hallicrafters S-53A (1958?), very clean; I think the miniature phone jack on the right side is "aftermarket", w/copy of Sam's service manual. Working $135

Western Electric AM-912/TRC "B-Band" amplifier 100-225 MHz. Really nice crank tuned cavities; one for the input and one for the output. Originally used a 4CX150 to run all of 100 watts but, you could stuff one of the more robust members of the family in the socket (4CX350?) and run about 500 watts with little difficulty. The front panel is about 6 x 12 and it is about 14" deep. The original power connector has been removed and replaced with a barrier strip that is marked with required voltages. $125

All of the above plus shipping if necessary, naturally! :-)

Source record: 82388
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

My neighbor across the street recently installed an electric fence. I first noticed it when going out for a morning walk and listening to AM radio on a little walkman radio. As I feared, the neighbor's "spark transmitter" is also audible when I listen to shortwave at night.

I suppose I could ask him to turn it off at night, but I'm not optimistic that he'll agree. I wonder if there's such as thing as a "tick-less" electric fence unit. I might be willing to spend a few bucks and buy him one, if it would eliminate the maddening ticks.

I'm assuming there's not much I can do on the receiving end to filter it out .. . .

All prices plus shipping from 07657

1.) RCA radiotron 211/VT-4B Used, filament lights up, Ohmmeter shows no shorts. Otherwise untested. Date of manufacture etched on base--Apr 24, 1936! A neat old tube for use or for a collection. $45

2.) Pair of Japanese WW2 vintage 807 tubes. Manufacturer logo unknown (I can't read Japanese:)) Type number UY-807A Nicely made, obviously military (ceramic/metal bases, heavy duty structure, straight bulb). Person I got them from pulled them out of a captured radio in '45. Test like new. $30

3.) Pair of GE 7027. Test good in GE boxes--appear to be somewhat used. $20

4.) A bunch of NOS tubes. Mostly RCA, GE, Sylvania. Many industrial types.Want to sell them as a lot. $450 for the lot (190 pcs) Types and quantities as follows:

290. Wanted - Case and panel for Johnson Viking II

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-09 00:00:00 UTC
From: Jim Mullen <jmullen@rockys.com>
Message-ID: <37857cb5@news.newsfeeds.com>
Source record: 82305

Hi gang,

I guess the subject says it all. Fat chance I know, but it's worth a try. I just picked up a perfectly good Viking II, but the case has been repainted, and the top cover is a mess (holes drilled in it). I'd like to restore this old xmtr, so I'm looking for case parts. Actually, a new top cover and panel would do the trick. I could paint the rest of the cabinet to match, it 's in pretty good shape.

Also looking for a ***reasonably priced*** 122 VFO.

Thanks,

Jim Mullen - WA1ZUH

Hi
I'm the new guy with a r390a that I want to get working...I have the manual and basic understadning, but need some guidance thru the alignment (syncronizaton) mechanically and electrically as well as looking for an id nameplate..
any help would be apprecitated.
thanks
tf

This proves again that ham radio is world WIDE, and apeals to folks of every persuasion. At age ten I'd have been thrilled at such a picture. After 60 years of hamming, that rig no longer brings me into resonance.

Oh well.

Source record: 82315

These tubes were from a large TV and Electronic repair shop. All the boxes were sealed with tape and the inventory was taped over the outside. I've checked and as far as I can see, every list matches what's inside the box. A few boxes were on the floor and got damp but seem fine. Tubes are Zenith, RCA, Sylvania, GE, Manavox, Philco, etc.

There's also one tube caddy with various tubes I haven't categorized I'm including.

Also I have some TV modules and parts to sell separately if anyone is interested.

I'm taking bids on the whole lot + UPS shipping & Insurance. I live in Pittsburgh and will be traveling to eastern PA in the next few weeks. Or if you live within 4 hrs of Pittsburgh we can negotiate a delivery.

If you have any questions, please email or call.

Thanks,

Henry Shapiro

Has anyone got a Knight T-400 transmitter for sale (or trade) ?
Has anyone got a Knight T-400 ?
Has anyone ever seen an actual Knight T-400 ?

All I have ever seen are the ads and a brief 73 magazine article that
says one was exhibited at an electronics show once.

73 & Have Fun,
Nick KD4CPL

what are you looking for? I have a really nice Collins HF-2050,
including top and bottom covers and is fully operational. Asking price
is $2500 shipping included in the US.

A complete step by step description of R-390A alignment is contained in The Hollow State Newsletter, Number 29. Back issues are available for $1 each - minimum order is 5 issues. An index of all 45 issues is available for $1. Contact the publisher, Ralph Sanserino, P.O. Box 1831, Perris, CA 92572-1381, E-mail: sanser@GTE.net. Ralph will probably help you select 4 other issues (mainly about R-390A stuff) to make up your minimum order. Have fun fixing up your R-390A. I'm in the middle of fixing one up myself.

Hi,

Not trying to be a smart a-- but try the R390 reflector. Go to qth.net
sign up. Once you're in that reflector there are a lot of guys who'll
help you all they can. There is also a video out that will walk you
through the whole procedure.

Good luck.

Dennis

FS..Turns counter taken from some long time gone military transmitter I had years ago...the label on it is marked P.A. Tuning, and the front mounting footprint is 4 in X 4 in, with a black crinkle finish..it is a 20 turn device, with a spinner handlethat folds flat), and a dial lock..it has a 1/4 inch shaft and gear reduction..it is designed for zero backlash.. This counter has a dial marked 3 to 18 mhz, but if necessary I believe someone could get inside, and put his own dial calibration...this has quality written all over it, and is a rare find for a tuner, or amp...$45.00+shp..Bob on L.I.

I need the following QST's and ARRL Publications to complete my
personal collections. I have lots of duplicates available for trade.
Let me know what you have, condition, and price.

I have a large number of duplicate 1950's through 1990's that I have
rescued from their inevitable resting place in the landfill. If you
are in need of an issue, and I have it, I'll be glad to let you have
it for the cost of postage, even if you don't have anything to trade.
I hope to get this list up on my web site soon, but till then, just
let me know what you need, and I'll see if I have it.

I'll also consider paying shipping for any QST's that I don't need,
just to keep them out of the trash. I stay awake at night thinking of
all the QST's that have been tossed over the years ;-).

NEEDED QST&#65533;S

1915 DEC
1916 JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP, OCT, NOV, DEC
1917 JAN, FEB, MAR, APR, MAY, JUN, JUL, AUG, SEP,

I have heard of a method whereby a sample of the pulse is taken and fed to the
received out of phase. It is supposed to be pretty effective. Unfortunately,
I don't have a reference to the schematic. Perhaps you can research this angle
or someone else on the list can shed some light.

Good luck and 73,
Barry - N4BUQ

324. MUseum Ships Operating Event Next Weekend!!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-10 00:00:00 UTC
From: mc@sover.net
Message-ID: <37873c05.33525655@news2.sover.net>
Source record: 82248

Hello Everyone:

Check out the "Ultimate Boatanchor Operating Event"!!! I will be there from Saturday afternoon through (early) Sunday morning.

The "1999 Museum Ship Special Event" will take place from:

1330Z July 17th through 2000Z July 18th

They currently have 39 museum ships which will be activated for the weekend.

The USS Salem Radio Club (K1USN) is sponsoring this event. Certificates are available for working five different vessels during the weekend. W1QWT is the QSL Manager for K1USN. He is also the Certificate Manager. Send a business size SASE for the QSL; 9 X 12 SASE for the Certificate. The following are suggested operating frequencies for ships operating during the event:

AM - 3885 kHz

SSB - 3930, 7230, 14230, 18130, 21330, 24935 and 28430

CW - UP 30 kHz.

Activity will be available on 6 and 2 meters also.

For further info check the K1USN Web Page:

http://www.ziplink.net/~rcal/salem

OR E-MAIL TO W1QWT - rcal@ziplink.net

73,

Michael, W1RC

325. Military Radio Disinformation Alert #1

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-10 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <37877FB1.B9B4156B@ix.netcom.com>
Source record: 82249

Military Radio Disinformation Alert #1

More and more myth and misinformation about
historic military radios are being posted to the web.
As an assistance to newcomers, I will post these
alerts as the errors are identified.
---

http://navismagazine.com/sample/b29/tour-radio.htm

While Navis Magazine's online B-29 tour is well presented
and very interesting, the Radio Operator page is
erroneous. The SCR-274N HF Command Set is not mentioned at all
and is misidentified as antenna controls. The ARN-7
compass control box is labeled as an electrical panel.
The flight suit thermal heater control is labeled as a part
of a gun turret. The ART-13 transmitter and the dynamotor
shelf below it are labeled as the Navigator's position.
A description of correct radio complement of the B-29
from early WW-II to Korea plus corrected graphics
were emailed to the webmaster. No corrective action
has been taken and Navis Magazine
did not send a courtesy reply of any kind.
The correct information and corrected graphic- which
is a U.S. Air Force photograph from about 1950 and
thus in the public domain- are available on request.

If you, as a fellow military radio enthusiast,
are aware of a site containing incorrect information,
please forward the URL and correct information to me.
After peer review, we will contact the site's webmaster
and ask that the page(s) be corrected. If no action
is taken in a reasonable time, we will post the
URL and information in one of these alerts.

73 DE Dave Stinson AB5S
arc5@ix.netcom.com

P.S.
Does anyone remember the infamous URL of the
company that was claiming it invented airborne VHF
with the ARC-1? Can't find it here.

Jim,

I believe it came out in 1953 or 54. It was the successor to the very popular HQ-129X, which was introduced around 1947. Actually, the 140 was pretty much a miniture tube version of the 129. There were two versions of the 140, the "X" version with the round meter and the updated "XA" with the square meter.

I'm sure someone on the newgroup can refer you to a source for Hammarlund manuals. I'm just not sure of the web addresses for them.

Jim,

Go to the Hammarlund Historian Web Site Manual Page
(http://www.qsl.net/hammarlund/hamrmanu.html) The HQ-140X manual can be
downloaded there for free or you can order one for $17. The HQ-140X was
manufactured from 3/1953 - 7/1955 according to the Historian.

Jim,

One PS. Be sure to back up to the home page and go the the "H-Files".
There you will find a couple of four page ads sheets for the HQ-140 as well
as a 919kB file that is also labled as a manual (the manual page lists the
download as as 6.3MB). You can get to the HQ-140X portion of the H-Files
directly by going to http://www.qsl.net/hammarlund/info/hq-140-x/

Good luck with a nice looking receiver!

Rob

343. FS: ===<COLLINS>=== S-3 Line. Complete.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-10 00:00:00 UTC
From: Joe K7JOE <K7JOE@yahoo.com>
Message-ID: <3788107B.598606D5@yahoo.com>
Source record: 82267
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

This is it. The BA nostalgia station you've been looking for. 1960's Collins S-3 line. A classic. As used by many of our men in South East Asia, His Magesty JY1, the Senator K7UGA, and even James Bond (ok...maybe a stretch, but I bet Q used the S-line). It works great. Why hold an extra class ticket if you dont run an extra classy station.

Here's what's included:

1. Winged Collins 75S3 receiver with 200 HZ CW filter. S/N 10285
2. Winged Collins 32S3 transmitter S/N 11449
3. Winged Collins 516F2 power supply S/N 5973
4. Winged Collins 312B4 station console S/N 57727
5. Winged Collins SM-2 desk microphone S/N 1649
6. Winged Collins CP-1 crystal pack for general HF coverage
7. Speech Processor -- OEM . Logrithmic AF Speech Processor by NEEE

All in CCA way cool condition. No repaints. Original. I am the second owner (purchased in mid 1980's) Receiver has several of the service bulletins implemented. Some spare tubes. All items include original owners/operators manuals. All interconnect cables included. Station can be demo'd in Portland Oregon or heard on the air any time. Mid life crisis forces sale: I'm on to Harley Davidsons, so this classic from the mid 1960's could be yours. Serious gear. Serious inquiries only, please. Price is firm at $1750 + split shipping (4 or 5 boxes, double boxed).

Sure, you could buy something newer, but nothing like the smell and sound of tube audio and tube RF. Even the neighbors will be pleased by the smooth Collins audio rolling through loud and clear on their TV's and Telephones. If you're gonna cause QRM, do it with the best. Those that know....know. No Lids, No kids, no Space Cadets. (except Wiskey Sixes)

thanks,
Joe K7JOE Collins "Appliance" Operator. Extra Class.
Portland Oregon

Joe, my first memory of the SX-62 (actually an SX-62A) dates to 1957 at Morrison's Radio Supply in Ashtabula, Ohio. I had just gotten my novice license and was "hanging out" in the ham department a lot!

I remember the SX-62 for its GREAT sounding audio - I recall listening to music audio from one of the lower TV channels and was really impressed with its ability to tune that HIGH in frequency!! I seem to recall that it had a push-pull audio output stage?

Great find - I'm envious of you!

That might be the Heath M-1 (sounds like a WW2 rifle, doesn't it?). There's a picture and some specs in the Heathkit Virtual Museum at http://www.heathkit-museum.com/test/m-1.html.

Basically, it was a 3" meter with a 400 uA movement and had an accuracy of 2% full scale.

An M1 was brought in for service in the mid '70s and I had to order a photocopy of the schematic from Heath. I can't remember what was wrong with the unit, but it probably had something to do with cleaning the contacts and maybe replacing an out-of-tolerance component.

Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

There are "tickless" electric fence units, but it has been a long time since I looked at them, and all the ones I surveyed back then are obsolete. Not much, other than a good noise blanker will work in the receiver. The big problem is that the pulse "loads up" the receiver agc, reducing receiver gain between pulses.

Look at the semiconductor triggered fence chargers; however some of them are just as noisy as the old mechanical breakers. Testing is the only sure way, unless someone with up-to-date knowledge signs in here. Good luck!

361. INFO: TR7 problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-11 00:00:00 UTC
From: "D. S. Platt" <jeepp@erols.com>
Message-ID: <3788CD8E.B53515B7@erols.com>
Source record: 82194

My recently acquired TR7 has a problem. It occurs, generally, at turn on and often goes away after a while, then returns. Or it may not occur at all, even during extended operations (like the contest this weekend). The symptoms are always identical. The problem is that all 500khz segments are not addressable via the up/dn pushbuttons. That is, e.g. on the "14" mHz band, when incrementing from 13.0 upward, the freq will jump from 13.0 to 14.5 (1.5 mHz jump) and vice versa. This also happens on the 3.5 mHz band. It jumps from 3.0 to 4.5 mHz. (again a 1.5 mHz jump). It appears the the other bands have similar problems and/or a jump of a single 500 kHz segment. Heat does not appear to be the culprit. Again, all symptoms occur or none and always the same symptoms. The radio has been sitting on a desk since new and used by the former owner for CAP use on one band, with an occasional QSY to SWL, hence the as-new condition. The radio works fine, though. Any leads? Switches? Whatever..... Thanks.

THANKS TO ALL who reponded, you've given me an extra boost to really get into it...I will be getting a scanner on my PC soon, and will post some photos on a website to share...BTW, if anyone has a restorable original speaker for it, please let me know...that would set it off nicely! Also, I can make laser repro's of the original manual and slightly small schematic for anyone who needs it, for just
7.00 for printing, paper,binding, clear-cover sleeve and postage...the leg - work is on me!
It has alignment instructions, too....

Thank you,
Joe Pratt, Tubecntral@aol.com

I've repaired several TR-7s and TR-7As. They're not that bad to
work on. Please don't part them out; put them on Ebay and
let us "duke it out" so the rig can have a chance of being fixed.
Nobody is going to want a TR-7A with the filters removed;
they aren't going to find replacements. The TR-7A and PS-7
is worth about $450-$550 on Ebay working, or even more
so perhaps you can judge what a "busted" one should bring.
You won't get a quarter of that for the filters alone and
I wouldn't give you $50 for TR-7A that's had it's filters stripped.
Don't need the headache of trying to find replacements when
there are complete rigs needing repair.

Interesting that you should mention the ARC1. I picked up 2 of them at a garage sale about a month ago. One is in great condition internally, the other has been used as a parts unit. I picked up about 4 of the power tubes at the same time. I know nothing about these units and would love to know anything that can be provided. As near as I can tell the only thing missing is a front cover plate of some kind that covered three tuning knobs, and the crystals. Any additional information would be appreciated.

The following is reposted for those who may be interested in "QRT"
broadcasts in CW.

Friends,
This from Dick Dillman:

In my posting a couple of weeks ago I mentioned that the Globe Wireless
stations, the last coast stations in North America to use Morse, would
be
closing down their Morse operations on Monday, 12 July.

I now have the time and frequency information for that event that many
readers asked for.

The call signs involved are WCC/WNU which will be keyed from Lousiana
and
KPH/KFS which will be keyed from Half Moon Bay, CA. I use the term
"call
signs" instead of "stations" because in the cases of WCC and KPH,
formerly
the calls of the two great RCA stations on the east and west coasts,
their
original transmitting plants were shut down years ago. Still, it will
be
your last chance to hear these calls on the air.

The official beginning of the event will be at 1600PDT (2300Z) with
messages
from WCC/WNU followed by messages from KPH/KFS with the final sign-off
at
2359Z. However certain personal or organizational messages may be sent
from
KPH/KFS beginning at 1500PDT (2200Z). So my advice is to start your
listening watch a little before 2200Z to make sure you hear everything.

The frequencies are listed below but please be sure to read my special
request at the end of the list.

WCC/WNU

500 Kc.
12826.5 Kc.
17117.6 Kc.

KPH/KFS

500 Kc.
8444.5 Kc.
17184.8 Kc.

Special Request: I will be at the Half Moon Bay site to participate in the
closing ceremonies. Thus I will not be able to make any off-the-air
recordings of the event. My special request is that anyone within listening
range of any of the stations - but especially KPH/KFS on 500 Kc. - do their
best to make an audio recording of the transmissions. I would of course
like a copy of any such recordings for my archives and would be happy to pay
and copying and shipping costs involved.

Seems that many folks have been getting blank responses from me...sorry. So I am just typing the item and prices on the news group. If you would like more details please email and I will try to send the detailed list to you. Thanks all for your patience.

Most items are pick up only in Erie, PA

SP-600 JX-26....$315

SX-111...$125

SX-130...$225

Knight T-150A and R100A $225 pair

Morrow Twins MDR-5 and MB-560A w/ homebrew supply $225

Viking II with 122 VFO rough, $140

Eico 730 modulators $100 each

Globe Chief 90 and UM-1, rough $125

Heath ID-4001 Complete WX station $325

Heath HG-10 VFO $95

Heath CO-1 Code Oscillator $50

Heath GR-81 Reciever $125

(2) REVOX A-77 reel to reels $75 pair

Knight Space Spanner $75

Knight Span Master $100

Knight Star Roamer $150

All 3 as package deal for $265

NC-57 $75

NC-105 $140

Gonset GR-212 Receiver , rough $75

Millen R 9er with 20 mtr coil $50

Complete Drake C-line with MS-4, all filters, sherwood mods and 2 new 6JB6's $525

Drake TR-4 and TR-3 with AC-3 as a package $225

GRC-109 "Spy Radio System complete" works well....$250

Shipping and packing are extra if items are shipped. Do prefer pickup for big stuff.

399. COLLINS KWS-1 TRANSMITTER FOR SALE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-11 00:00:00 UTC
From: K9CSM <k9csm@pcisys.net>
Message-ID: <931707888.007.36@news.remarQ.com>
Source record: 82287

I have an excellent KWS-1 transmitter for sale. This unit is 43 years old. The fronts of both portions are exceptionally sharp & unscratched. It has the 4:1 vernier knob/main tuning. It has 4X250Bs in the final. Appears original in every respect possibly excepting a replaced control wire or two. The verniers on the tuning & loading controls work very well. All knobs are original & in excellent condition.
I will sell it for $2000. plus shipping (and crating if required by destination) of course. I have proper cartons that will work well stateside. I can arrange crating if necessary for shipboard transfer (yes, I am willing to arrange overseas) to its new owner.
Please don't wait for the price to be reduced on this unit. If you want a good-lookin unit, here it is. I WILL NOT REDUCE THE PRICE ANY FURTHER. I HAVE $2500 cash invested in its purchase & transportation years ago & can't afford to reduce anymore to suit tire kickers any more. This is a dandy. Its what a real Collins collector has been waiting for (if you don't already have one) so why wait? Thanks for reading my dissertation. I apologize for monologing, but I thought I'd tell you as much as I could. If questions arise, please E-mail me. I am well known in this area (east of Denver) and can furnish bank reference, both personal & businesswise should it be required. Thanks, Ben Piller, K9CSM k9csm@pcisys.net

Remove the top... Horizontal circuit boards near the front have pins on their bottom sides that go into sockets... You have oxidation... loosen enough connections to pull them out of the sockets... Use tuner cleaner and pump the pins up and down in their sockets a few times... Should cure it... Also, use cleaner on all of the rotary switches and work them a dozen times while spraying...

Denny

409. Looking for info on Hallicrafters S-38C

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-12 00:00:00 UTC
From: Doctor Memory <tmnelson@acm.org>
Message-ID: <7mdbopolv1@news1.fast.net>
Source record: 82097

I just picked up a Hallicrafters S-38C in great condition, but I don't know a thing about it.
It picks up commercial AM just fine, but I haven't been able to pick up anything else. I'm
totally new to this, so any clues would be appreciated! My specific questions are:

* What does the AM/CW switch do?
* What sort of antenna do I need? There are two screws on the back labelled "A1" and
"A2", which I assume are the antenna connections. Can I just hook a long loop of wire
to these? Just a long length of wire to one? Which one? Can I get/make a "real"
antenna?
* What does the Receive/Standby switch do? I assumed that it would switch off the
amplifier section while keeping current going to the tubes, but the radio doesn't seem
to function any differently when I put it in standby.

Is there any place where I might get a copy of the manual for this set? I searched the
web but didn't come across many references to the 38C.

Thanks for ANY information!
-- Tracy Nelson

There are lots of us that get on 160/80/40/30M.

Usual QRG 7147 or 3578 after darkpath, maybe 0200-0500Z.
Also 7026 is used of late, around 0300Z.

Winter gets 1802R5, after dark.

A little of late on 10110 around dusk, but that is not too common.

Listen for anyone calling CQ BA (for BoatAnchors) or CQ GB
(for GlowBugs [home brew boatanchors]) or CQ BA/GB for both.

We get folks from all over North America, no sweat, running
everything from Hartley Oscillators to Naval SRT's of biggie iron,
to anything ham that glows in the dark and emits continuous waves.
To date we have not had anyone show up with an arc converter,
though.....(:+}}.....

Anyone runnig BA's or GB's are welcome to join in. If you don't
have any GB or BA gear, but are just interested, join in, too!

There is a list available for those interested in building/using
HB boatanchors (glowbugs). Email me back, and I will forward
it along to the listowner, if interested.

Try hooking about 20 feet of wire to the antenna terminal and the SW bands
should come to life.

I made a slipcover that you can print out on a laserjet and then put on
over a drum with a piece of clear tape. It works fine on my R-388.
Find it at: ftp://piobaire.mines.uidaho.edu/pub/Glowbugs/Dials.

Someone else did one, too, but I don't remember the url to it.
Mine is black and white, his was red color on the reverse track bands.

The drum could be fabricated relatively easily, but the bandswitch
cabling has to track with the drum and bandswitch to effect proper
band/dial changing. If you can get that set right, it may be not
that difficult to remake.

Good Luck... Bob/NA4G

>I just picked up a Hallicrafters S-38C in great condition, but I don't know
>a thing about it.
>It picks up commercial AM just fine, but I haven't been able to pick up
>anything else. I'm
>totally new to this, so any clues would be appreciated

Regarding yourspecific questions:
1. The AM/CW switch controls the beat frequency oscillator. In the CW position, you will be able to hear code transmissions and amateurs using single sideband, if you tune the bandspread very carefully.
2. On the other models of the S38, there are three antenna screw connectors: A1, A2 and GND. If you are using a single wire antenna, connect it to A1 and put a short jumper between A2 and GND.
3. The Receive/Standby switch removes the high voltage from the tubes while leaving the filaments lit. If there's no difference in function on your rig when you switch it, perhaps the switch has been disconnected.
4. Look at www.hallicrafters.org and follow links to S38 schematics.

Your '38C was manufactured between 1953 and 1955. The various '38 models were the most popular Hallicrafters ever made. Original price was about $49.50. These little receivers were known for their excellent audio and lack of sensitivity on the higher bands. Previous models of the '38 were finished in black paint. Yours was the first in "hammertone" gray. Yours was also the last model in the original S38 style cabinet. The "D" model appears different, although electronically it's about the same rig.
Note that the '38s are AC/DC rigs. That means that you could get seriously bit by 120V AC if you take the rig out of the case and plug it in. It is possible for the chassis to be hot with AC.
If you're not getting antything but AM broadcast, my first suggestion would be to spray the bandswitch with some cleaner and then work the switch back and forth between the four positions several times. It may take more than one application to get all the crud cleaned out of the bandswitch wafers.
Your receiver is a fun, collectible piece of ham radio history. Enjoy it.

Let me know if you need more info.

The AC-1 was the typical 6V6 Xtal Osc transmitter with a 6X5 rectifier. I'm sure you could build that or a lot of similar rigs from the 50s for much less than $300 - welcome to Boatanchor Cult Classics! Some of the simple little rigs disappeared because they were cheap and expendable when someone upgraded. Now they are expensive nostalgia classics. My AC-1 is sitting next to an Ocean Hopper.

Speaking of the end of commercial use of the International
Morse Code, just before field day, I decided to hook up
my Vibroplex paddle and Morsematic MM-1 electronic
keyer in my comvan (see photo in hyperlink below)..

After many years of RTTY/Pactor/Gtor, I find I am running
into a LOT more people via Morse than with HF data.

I've been known to call cq in pactor on 40 meters until
I am blue in the face and rarely run into other hams
who like to get into long-winded qso's via 40 meter
HF data in Northern California..

Now I'm going the opposite direction from the no-coders,
and learning all the obscure morse characters that most
hams never use... Did you know that some reference books
show a left and right Parenthesis as seperate charactors
in morse ?? _._ _.= (vs _._ _._ =) ?? Others show
both left and right parenthesis with the same
charactor as: _._ _._

Wonder who is right ?? the ITU ??

and will it only be spies and radio amateurs that will
be using morse code 10 years from now ??

449. Value of Drake "project gear" TR-7A, PS-7, SP-75?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-12 00:00:00 UTC
From: k9sqg@aol.com
Message-ID: <19990711210203.07143.00010241@ng-bd1.aol.com>
Source record: 82219

From an estate I bought a TR-7A, PS-7, and SP-75 speech processor, with knowledge that the transciever did not work properly. Cabinets are above average. I was to be laid off and thought this would be a good project radio. Layoff was delayed until September or beyond so I won't have time for this type of project. Speech processor has an added 4 pin mic connector on the rear. TR-7A has added 4 pin mic connector on the rear but not connected to anything electrically. I've decided I might put it up for auction on Ebay. However, I might part out the individual units according to 500 hz filter, 2.3kc filter, noise blanker, power supply, speech processor, and the TR-7A less the previous. Anybody have a good idea of what these parts might be worth? I'd rather keep it toghther for sale but not sure that is wise considering it's condition.

459. Any scan of 51J4 megacycle drum readout?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-12 00:00:00 UTC
From: orion <orion@otenet.gr>
Message-ID: <7mcfv0$l8q$1@newssrv.otenet.gr>
Source record: 82229

Hello all!

I recently got my hands on a wonderfull R-388/URR for almost nothing, however the megacycle drum is missing and thinking of fabricating one myself. What i would like to ask is if anybody got a scan of the readouts of this drum (or one from a 51j4) so i can print that on a paper and wrap it around the diy drum. Furthermore, any info on similar project would be graeately appreciated (i.e drum diameter)

Thanks in advance,

73 from Panos

Source record: 81990

At age 10, I just HAD to know how that marvellous Zenith in the living room worked. I learned. I built radios with scrounged parts during WWII.

After the war, I was able to talk to people again. Interesting people. Far away in those strange sounding lands.

Then came TV, SSB, Transistors, Computers, much more! ....Boring? Never!!!!

Met hundreds of great people - and a half dozen bad apples. Hamfests, Club meetings, Field Day, Elmer Classes and now "VE" tests. Code classes, struggling right along with those who have mental blocks on that single phase of the hobby.

Now, age 70 and retired, what will I do to relieve Boredom??? You know darn well.

73 es Cheers,

Plum

Sorry for the bandwidth. Need the space in my shack. I have the
following for sale:

Collins 75-A2. Restored back in 1994. Realigned and tubes checked.
Cabinet powdercoated and refinished in St. James Grey. Modified with
product detector but unit was removed. Tube socket/component remains.
Overall looks great. 100 kc cal (h.b). $350.00

Manual for above, original, good condition. $50.00

Excellent condition Collins NBFM unit for 75A2, 148-C1. $75.00

Collins 51-S1F. WE. Excellent condition. With sanitarily modified KWM-2
cabinet. $975.00

Manual for above. $30.00

312-B3 speaker. RE. $150.00

Collins 30-S1. Needs restoration. Complete, all there. Believe to be
working. Needs lock change out. New "Thirty S-1" script and lamp/switch
kit. Included original manual. Local pickup only. $1200.00

Collins R-391. With CY-979B cabinet. Radio works. Comes with power
connector for radio and autotune unit. Unit a Housing and Urban
Development serialized unit. Why? I don't know. Includes a spare front
panel (refinished) so you can preserve the current panel and use the
restored for station usage. $850.00

EF Johnson Courier amplifier. Case needs repainting. Otherwise complete.
Also believe to be working (fired up but no drive added). With original
manual. $400.00.

Two Hammarlund SP-600JX-17 radios. Both restorable. Includes new Premier
DCR cabinets. $450 ea.

Above doensn't include shipping. Contact Cal at this e-mail address. 73.

497. RFI on BC221 calibration

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-13 00:00:00 UTC
From: C.Wright@dera.gov.uk
Message-ID: <378b7df4.4190997@146.80.9.44>
Source record: 82151

Greetings from the UK.

I have a BC221T, donated to me by a good friend. It has a problem, and I can't see a way forward, so I'm asking for help on this.

Firstly, the 1 Mc/s crystal is within spec at about 1.5 c/s off nominal, checked against 5 Mc/s MSF/WWV.

The LF range calibrates perfectly against its frequency tables, after minor adjustment of the internal "Low" trimmer.

The High Frequency band will not tune low enough at the LF end of the band, e.g for a Dial Setting of (I can't remember the number exactly) 280 for the first calibration point, I can't, even using the "Corrector" and the internal "High" trimmer, get the dial nearer than (about) 325. Further up the range the calibration is nominal.

I'd like to keep this nice piece of kit in order, but what's the solution to this problem?

Any advice gratefully received.

FS..Turns counter taken from some long time gone military transmitter I had years ago...the label on it is marked P.A. Tuning, and the front mounting footprint is 4 in X 4 in, with a black crinkle finish..it is a 20 turn device, with a spinner handlethat folds flat), and a dial lock..it has a 1/4 inch shaft and gear reduction..it is designed for zero backlash.. This counter has a dial marked 3 to 18 mhz, but if necessary I believe someone could get inside, and put his own dial calibration...this has quality written all over it, and is a rare find for a tuner, or amp...$45.00+shp..Bob on L.I.
Please remove the (ns) from my adr...

Hi Jeff, (and anyone interested in the subject)

I own 2 CSR5's, one is the A model and one is the Y model. I just acquired a Canadian Marconi CM11 shipboard radio station which includes the CSR5A.

The CSR5A was manufactured for the Canadian Navy and it was used both by coastal and shipboard stations. The production started in 1942 but it was not in widespread shipboard use in the Canadian Navy until 1947 when it became the standard shipboard LF, MF and HF receiver. It was used until the early 60's when the Canadian Navy adopted the US AN/URC32 SSB/CW/AM transceiver to replace the CM11/CSR5A. The standalone CSR5A's were replaced by the Racal RA17 receiver.
You can read in detail about the CSR5A and its use in the research paper about
the HMCS Haida (a Canadian Navy Tribal class destroyer)radio equipment at: http://webhome.idirect.com/~jproc/rrp/toc.html
and take a tour of the radio rooms at:
http://www3.sympatico.ca/hrc/haida/radio/rrintro.htm .

You can buy a copy of the CSR5A manual from W. J. Ford Surplus at:
http://www.falls.igs.net/~testequipment/ .

In actual use the CSR5 is a nice receiver, and it works a a typical single conversion communications receiver of its vintage does. The sensitivity and selectivity are adequate but not spectacular, the dial has a nice feel to it but a little strange since the pointer moves opposite to the direction of the tuning knob rotation and this takes a bit of getting used to. I actually use mine for communications on the amateur bands with some other vintage collectors who also use old equipment.

You can also write to Jerry Proc who is the author of the research paper I mentioned above and was responsible for the restoration of the radio equipment on HMCS Haida.

Good luck with the receiver,

I hope this info can start you off in the right direction,

73 Meir WF2U

Source record: 82166

Colin,

I'm presuming that in this case RFI is a request for information :-)

First it is probably worth checking that the serials of the unit and book match. But that is not going to help you much.

What you are seeing is fairly typical of 50 year old electronics. Way back in the late 50's and early 60's your government paid a lot of money to have all the BC221's that it was still using re-calibrated, and there was a marvelous Heath Robinson device made that recorded the new calibration from a mechanical counter onto photographs that were stuck into the old books. You would see some of these surplus from time to time.

You could go the same route and hand calibrate yours using up to date technology which will probably be at least three orders of magnitude more accurate than the 221, (i.e. a frequency counter) and produce a new set of numbers to stick in your book, then you'd probably be good for another 50 years :-)

Or you can accept the thing for what it is, a well engineered museum piece, and sit back and admire it!

Hi Gang:

This is not the famous CY-979 cabinet (unfortunately) but it is a nice

metal table cabinet that used to house a microwave test set and will house
a R-390/390A, SP-600 or other radio of its size class. It is panel opening is 19" wide by 10 1/2" high. The cabinet will accomodate a chassis that is 15 1/2" deep. There is a top cover that is removable and there are handles on the top of the cabinet. Inside there is a muffin fan that could be removed if you want but it shouldn't interfere with the fitting of a receiver. It could use a cleaning up but is in nice condition. I'll trade or sell it for $75.00 plus UPS. Please reply by e-mail if interested.

73,

Michael Crestohl

If anyone needs a calibration program for BC-221 or LM freq meters,
visit the Glowbugs archives by ftp at:

piobaire.mines.uidaho.edu/pub/Glowbugs/

and look in the programs section.

If you can get 100khz calibration points (they are usually quite
strong), you can calibrate the meters, using the bc221lm.zip files.

They are crude, written in FORTRAN 66 (Boatanchor Computering),
but work just fine, and print out a calibration book for you.

As to the fix, all you can do is add inductance or capacity, or possibly
pad the range slightly until it is within spec. That happens on all
things radio, even Art Collins' fine ptos....

Regenerating the calibration book is the path of least resistance,
usually.

Good Luck

I have a nice Hallicrafters R-274/FRR for sale. This is the military version of the SX73. This one is complete with top cover and all 3 front tags. There is no bottom cover, but it would be easy to make one.The receiver works, but needs some alignment. Some bands are more sensitive than others. The front panel is nice. No worn spots, but there are a few small nicks in the paint. All knobs are original and in very good shape. The meter in also original and works fine. No mods. that I can see. I also have the original manual. Price is $875 plus shipping. I would prefer a local pick up in Abilene, Texas. Charlie, k5MBX

"Boring:" What a person without imagination says
to blame his lack of initiative on others.

I've been in this hobby for 28 years. The only time
I'm ever "bored" is the 12 seconds it takes me to figure
out what I want to do next. There are more facets to this
hobby then I care to enumerate in this post, from Longwave
weak signal experimentation to those attempting 10 Ghz Mars-bounce.

If a person can't take the time to consider alternates to
20 meter SSB or contesting, they need not blame the hobby.
They can find the problem in the nearest mirror.

Hello Folks,

I have the chassis from some sort of 1950s AM-FM radio that I am trying to identify. Unfortunately I have no documentation on it at all - can't even tell the manufacturer! I would tear it down for the parts, but it's in such good shape it'd be a crime to dismember it. Can anyone tell me what it is, or direct me to a newsgroup that specializes in this era of BC radios?

It is about 10" X 7", and has sockets for five 7 pin tubes, two loctals, and one octal. There's also a six pin socket for the speaker (with output transformer and field coil). The dial is in the shape of a 90 degree arc of plastic, backlit with pilot lights. The AM and FM scales are different colors. No built-in loop or loopstick - there is a three terminal strip marked "G FM AM" for the antenna. Four controls - tuning, volume, AM-FM-PHONO (there's an RCA phono jack on the rear). The back of the chassis says "CHASSIS ASSY V2118" and "SER NO 700000900"

The IF transformers are the dual-frequency type and have part numbers V4627, V4628, V4629, and V4630. The power transformer has part number V4653.

Does anybody know what this thing is? I just want to give it a good home - free for the shipping cost from 19082. (Weighs about ten pounds).

Sound familiar to anybody?

73 de Jim, N2EY

I am looking for a service (not user's) manual for the subject receiver. I have tried the normal manual sources to no avail. Happy to pay copying and shipping costs, of course, tho an original manual is preferred.

Thanks in advance,
Walt

Subject: ** FLEA at MIT ** This Sunday July 18th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday July 18th 1999
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)

MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Well done, young lady!

> After many years of RTTY/Pactor/Gtor, I find I am running
> into a LOT more people via Morse than with HF data.

Yes, always many QSO's available anytime worldwide via CW.

> I've been known to call cq in pactor on 40 meters until
> I am blue in the face and rarely run into other hams
> who like to get into long-winded qso's via 40 meter

Years ago, I did the same on rtty, and it got boring....back to CW.
It is quite fun to get half a dozen or more folks together for
a snappy roundtable in the evenings, at QRQ.

> Now I'm going the opposite direction from the no-coders,
> and learning all the obscure morse characters that most
> hams never use... Did you know that some reference books
> show a left and right Parenthesis as seperate charactors
> in morse ?? _._ _.= (vs _._ _._ =) ?? Others show
> both left and right parenthesis with the same
> charactor as: _._ _._

> Wonder who is right ?? the ITU ??

Technically there is an opening and a closing parenthesis.
You should use them separately, and not as one symbol. Older
code tables had one symbol, but the correct ones have both.
You can tell if a computer morse program is up to date
or based upon the old code tables, by whether or not it
sends the proper opening and closing parentheses.

Also, proper use of things like the apostrophe, the hyphen,
the semicolon, the full colon, and the dollar sign, the quote,
etc, are the mark of one who is well versed in the code.

> and will it only be spies and radio amateurs that will
> be using morse code 10 years from now ??

As was said of the marine radiotelegraph operators in the 1960's,
they were noted to be the last stand for brass pounders.....

They are passing on the baton to us, the amateur radio service,
and we are now, ``The Last Stand for Brass Pounders...''.

Learn it well. Learn it accurately. Practice it. Treasure it.

> Trish

ZUT DE NA4G/Bob UP

EE

p.s. Although the active CW system has closed, in the US, with
the cessation of operations from KFS/KPH/WCC/WNU, there
``is one other'' if you listen, carefully to the ethereal
waves... WLO/WSC/KLB still sends a TFC LST/WX via CW on
QRG 4343.0/6344.0/8514.0/12886.5/12022.5/22487.0 KCS
QTR ODD H+0. Also, on 4292 about 0100Z there is an Italian(?)
station (IAR?) sending the Mediterranean WX. There are
still some 25 or so call tapes running on the marine bands.
Not much, perhaps, but it is still there. Just listen a
little in the quiet of the night.....

I recently purchased a Clegg 99er transceiver and it didn't have a transmit crystal with it. The manual says to use a crystal of the FT243 type in the 8.33 mhz range. I want to operate the crystal on 50.4 mhz on 6 meter AM. If anyone has the proper crystal for sell i would be interested in buying it, if not, i have found a crystal company and can make it for me but i have to tell them the exacr 8 mhz. frequency i need that will work on 50.4 mhz. If anyone knows what that frequency is or how to figure it i would be appreciate any help. 73, Dale WA5GVE

Globe Wireless has been very good about QSLing their transmissions. Do not know if there will be a special QSL - one would think so. The QSL address is:

Globe Wireless
One Meyn Road
Half Moon Bay, CA
94019

They handle the QSLs for all the G/W stations around the world.

Dave,

The rig you are looking at is typical of most 6 meter AM rigs - the transmit frequency is six times the xtal frequency. So just divide 50.4 by 6 to get 8400 kHz.

Have one too many amps and this three-8874 Alpha is just too good to have sitting unused. Cabinet is like new, front panel IS new--the black version with white lettering, absolutely mint. Meters, knobs, Ac cable in perfect condition, clean, bright, and shiny. Tunes like a dream, tubes and power supply excellent--full legal-limit output with 75-100w in. Includes manual and original packing. This one is a keeper, suitable for collecting or everyday use. $1,395 firm, + shipping. Tks es 73! Jan N0JR

618. would you pay $175 for this R390A?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-15 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <932101071.778.22@news.remarQ.com>
Source record: 82083

I saw a neglected looking R390A receiver at a local shop and was tempted, but then I passed it by.

Condition: missing both meters and shaft/knob for dial lock. No case. Front panel with some surface rust but lettering pretty intact. The tuner mechanisms all seemed to work. Peering in the top, things looked dirty but intact.

Manufacturer: Stewart Warner, serial no. 734 (I think).

The price tag was $175, which seemed high given missing parts and unknown condition.

Did I pass up a good deal? Or was this just a fixer-upper that would cost more than the purchase price to get working? I have rebuilt other boatanchors (Hallicrafters SX-42, for instance), but this one looks like a whole different kettle of fish.

Two fully-restored BA's available from Ron, VE4KR.

The Skyrider SX-11 is an early model (circa 1936), complete and original in
excellent condition and fully-operative. Ron is asking $300 USD plus shipping.

The FPM-300 Transceiver is similarly in excellent condition, complete with
AC-DC cables, original microphone and Manual. Priced at $300 USD plus shipping.

Ron can be reached at (204) 339-6907. That is a fax/phone number - let it ring
at least six times if phoning.

Source record: 81942

Posting for a friend - VE4KR - availability of a restored and fully operative Commander receiver from this UK firm. Covers 1.7 to 32 MHz in both general coverage and separate, calibrated bandspread ham band modes.
Switch selects general coverage versus ham bands, 80-40-20-15-10m.

Features twelve tubes/valves - including rectifier and VR, 3-position selectivity, "S" meter and Noise Limiter. Tubes have been updated to American versions.

Dial is 180 degree presentation with two tuning ratios - 10 to 1 "coarse' and 100 to 1 "fine".

Cabinet and panels are black wrinkle finish.

Serial number is "H-145". Complete with Operator's Manual and Schematic.

Priced at $250 USD plus shipping.

Contact Ron, VE4KR, directly at (204) 339-6907, which is a combination fax/phone line, so let it ring at least six times if phoning.

NO you didn't
Fair Radio has a plenty for around that price. It's a difficult radio
to play with if you had no experience with them. Getting one in working
order would be the best way to go. 73 Chris

In excellent condition HP-23A $95+Shipping

632. FS: National NC183D+Spkr+NBFM adapter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-16 00:00:00 UTC
From: "Christopher J. Galbraith" <cgalbraith@ibm.net>
Message-ID: <378f2f20@news3.us.ibm.net>
Source record: 81952
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.shortwave

National NC183D, with matching speaker, NBFM adapter, and manual copy. $250 plus shipping. Prefer local pick up (Southfield, Michigan), would drive up to an hour to meet someone half way.

*Keep in mind that shipping will be at least $40 since UPS in my area *requires* foam in place packing on all electronic equipment, and the radio and speaker will require two packages (although the speaker could be shipped double boxed in peanuts).

e-mail any ?s, inquiries cgalbraith@ibm.net 73 de Chris, KA8WFC

Here's the deal:

The radio and speaker are in very good to excellent physical shape, with a few minor scratches on the case. I'd conservatively rate the radio and speaker a 8.5 on a 10 scale.

I have replaced the power transformer replaced with NOS Stancor PT (originals leaked black goo!), replaced 95% of the paper caps, replaced the RF gain control (with NOS A-B), tested all tubes. Radio works and receives well, IF in good alignment, RF may need some tweaking above 20 MC.

After playing with it for a couple months, the BFO has become intermittent. It doesn't seem to be a tube, so I am thinking it is probably a capacitor inside the BFO 'can', but I am not sure.

633. 4800 volt 1 amp xmfr $90.00 + shipping

I have a very well built homebrew 240 volt only primary, 4800 volt 1 amp ccs secondary power xmfr. Great for that 4-1000 project that you have been wanting to get going. I no longer have a need for this much voltage. Price is $90.00 plus shipping. Warning, this thing is really heavy at around 100 pounds so shipping will not be cheap. Will only ship via UPS ground. Will be triple boxed. My zip in San Diego is 92139.

FS: Hallicrafters, Hammarlund, Johnson gear

Hallicrafters S-38E general coverage receiver
Working, intact cabinet, no modifications, all original knobs (no chipped edges!), "speaker" lettering on front panel is off, but easy to replace, overall very good condition, manual, $60 + shipping.

Hallicrafters S-41G Skyrider Jr. general coverage receiver
Working, all original knobs & switches (but has added toggle switch below "h" on front panel), some light rust on cabinet top, overall good condition, clean photocopy of manual, $55 + shipping

Hammarlund Super-Pro SP-210LX receiver
Works great, 5 bands: 100-200 kHz, 200-400 kHz; 2.5-5, 5-10, 10-20 MHz; internal power supply (looks very professional) replaces original separate supply, non-original cabinet (but almost new condition), original knobs, front panel repainted light blue, copy of manual. $220. Pick-up only in Pacific Northwest (maybe meet part way)

Johnson Viking Ranger transmitter/exciter
160 - 10 meters , 65 watts AM/75 watts CW, needs power transformer plus meter glass broken in corner & should be replaced, all original knobs, dial is excellent, few small scratches on cabinet, overall physically good condition (or better), operating and assembly manuals (W7FG copies). $150. + shipping (prefer pick-up).

All prices are US$. Might consider trade towards other working BA gear.

73,
Brian VE7BCU
North Vancouver, Canada

Hi Guys,

I'm moving soon and need to reduce the size of my radio shack. The following are for sale, with pickup in Pittsburgh, PA. All are working and on the air. Cosmetic shape is good on all.

Globe King 500B with many "C" upgrades and brand new 811's and final tube. Includes modulator and VFO in original cabinet. HEAVY $800

Johnson Viking Valiant with solid state rectifiers, new mod iron and modulators converted to a pair 811A's, tons of excellent audio: $400

Johnson Viking Ranger I, original, and very good looking: $300

As I said, these transmitters are all working well and they all sound good. Documentation (original or copies) with all above. Someone who wants all of them can have all three for $1400.

Repeat: I do not want to ship these items!

Please reply direct by removing nospam from my address...

Thanks,

Brian

Sandy,
Something that has begun in my laid-back hamming is VE work. I never thought much about this aspect of the hobby until finally going through the simple ARRL accreditation program. It is a lot of fun, gets a group together who serves the public. Just what we need huh, another reason to "clatch" around the coffee pot! We have a few people running simple training programs, the Boy Scouts and a middle school radio club and there is a good chance we will be able to furnish the area with some new younger code fanatics. A new wrinkle this year was to "test" out at our remote Field Day site along the Kalmiopsis Wilderness. We licensed 2 out of 2. In short, there is always something new that you can do if you care to try. $1K down the tubes? Nah, $1K up in tubes!

Expensive when you find them.

>and shaft/knob for dial lock. No case. Front
> panel with some surface rust

Shouldn't be rust since the front panel is aluminum, as I remember.

> Did I pass up a good deal?

No, you can find 'em in working order for a hundred bucks or so if you look
hard enough. Be advised, however, that it will likely have some niggling
little problems like needing mechanical re-syncing, VFO endpoint adjustment,
clean/lube of the geartrain and slug rack, etc. These radios are not hard
to work on, however, just very complex. Each subchassis can be removed for
repair. Make sure you have plenty of ibuprofin if you need to take the RF
deck out, though.

I bought 2 R-390s recently for $150. Each worked but had numerous problems.
One is missing the oldham coupler for the VFO and the other is missing its
knobs. To date, I've had to do the following:

1. VFO endpoint adjust on each radio
2. Total RF and IF alignment on each.
3. Repair shorted bridge rectifier that powers the antenna relay on 1
4. Replace some dead tubes
5. Replace the 2 1 uF caps in the AGC time constant circuit on both
6. Repair 2 broken slugs
7. Tighten gear clamps and mechanically synchronize 1
8. Increase BFO coupling cap to 50 pF to increase BFO injection level
9. Clean RF bandswitch (still intermittent so I hafta take it out again!)

Get an R-390 manual and peruse it to see what you'd be up against. The plus is that parts are readily available. The expensive part will be the meters, however.

Good luck and 73 - John

ps would this be at Paul's place in minneapolis by any chance?

The following "cherry" Heath SB series gear, with manuals and cables,
operational and in excellent shape (no scratches, built by an engineer,
kept well maintained)

SB-101 + HP23 power supply + 2 spare 6146 tubes in boxes+ driver tube
SB-620 Scan adapter
SB-610 Scope
SB-630 Console with digital clock SWR & patch
SB-600 speaker
HM-15 wattmeter

2 spare SB 610 scopes, with cabinets
1 homebrew RTTY adapter built into SB-series cabinet,
with SB series knobs, probably ARRL handbook project. Nicely done.

For the whole enchilada, a matched set ready to happen: $600

645. Chinese tubes - how bad are they?

From: Bueno <royaltrux>
Message-ID: <378fc0f4.0@news.iglou.com>
Source record: 81965

I'm in the market for a matched pair of 6146B's and I noticed the Chinese tubes are about half price. I have heard bad things about the Chinese tubes but I also heard that they are getting better. I also assume that they haven't been sitting in a warehouse (or somewhere!) for 20 years.

Would anyone care to discuss informed opinions of the relative merits of Chinese tubes versus American NOS?

(My rig is a Yaesu FT-101 ZD)

Hmm, how expensive is "expensive"? $50? $150? ...? And if so many units are missing meters, does everyone just grit teeth and pay the price, or is there some workable substitute? Doesn't seem like much fun to run w/ no meters at all.

>>Front panel with some surface rust
>Shouldn't be rust since the front panel is aluminum, as I remember.

Coulda been grease & grime. I didn't look that close.

>ps would this be at Paul's place in minneapolis by any chance?

No, a junky antique mall in Washington state, stuck in between the Beanies and the crappy 1970s furniture. No other electronics in sight. I think their price was a wild guess, but that doesn't necessarily mean they'll come down. Some times the most ignorant sellers are also the most stubborn :-)

I suppose I could go back there with my variac & an antenna wire & speaker and try to power it up, then offer something reasonable if it shows signs of life.

Phil

Phil - NOS replacement meters are available from Surplus Sales of Nebraska
for $75 EACH. If you aren't worried about authenticity you can replace them
with white scale meters of the same size. The meters were removed by the
military because the numbers were painted with radioactive paint. SOmewhere
in Arizona there's a huge pit full of R-390 meters, covers, and probably
SP-600 cabinets :).

Phil - if it's not an electronics place I would go and try it out, and offer them <$100 for it. That is somewhat reasonable if it works. As far as getting the meters, you just have to peruse hamfests. I got a homebrew transmitter for $2 that had R-390 meters in it, and I see them advertised here for about $25 each (but they go fast!) so just be patient.

Don't bother with the variac. I've NEVER seen a bad electrolytic in an R-390, besides they plug in like tubes so you can pull them out and check them before you plug them in.

Good luck, and let us know what you find out. 73 John

664. Repairing HQ-120X Dials??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-17 00:00:00 UTC
From: Bruce E Stock <stockb@accessone.com>
Message-ID: <3790A4E2.77AA@accessone.com>
Source record: 81847

I have acquired an HQ-120X that has a bad case of delamination of the main tuning dials.

The circular dials are a three-layer sandwich of materials, with a center ivory-colored thick layer, between two transparent thinner layers. The main dial has delaminated so badly that it is no longer possible to tune the radio.

Has anyone had any experience with repairing this condition? Or have any ideas on what sorts of adhesives/glue might be appropriate for these materials?

Thanks, Bruce AB7YD

Dear boatanchor news group,

I have a Hallicrafters SX-28 in need of a general overhaul. Its in reasonable functioning condition but a peak inside shows a few components that look as if they are going to need replacing real soon!
Is there anyone in the Pittsburgh, PA area who could help me out with this or even take on this overhaul project for me? This is NOT for sale, I just need some help fixing it up.

Kind regards,

Paul.

Round 2.

I went back with toolbox in hand, to take another look and try to fire it up. All of the fuses were broken in back and it had no power cord, so I wasn't able to power it up. I saw some chunks of the fuseholders on the shelf it was on, so they must have been smashed when somebody muscled it into the shelf. As I noted before, it's missing both meters, the dial lock, and one small knob.

Otherwise, it seems dirty but intact. The tuner mechanism works through all the frequencies, tubes are there and have shields, nothing else visibly abused. The front panel is not rusted, but looks like maybe some chemical spilled on it. Has some scattered discoloration that won't rub or scrape off with a fingernail. Maybe I could carefully buff it off, if it hasn't penetrated all the way through the paint. There's a patch of scraped bare metal about 1 inch square below the big tuner knob.

I made an offer of $75. The mall folks later called back saying the seller would reduce his price to $110 (from the original $175). I'm still thinking about it. Unfortunately, this is one of those goofy places that won't let you talk directly to the seller, so I can't learn anything about the set's history.

Phil

My schematic shows the Receive/Standby switch as a single-pole,
double-throw too. Your double-pole switch is probably a replacement. I
have replaced a few of those switches on the old Hallicrafters sets of
that vintage. They are prone to failure.

698. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-17 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7moqjm$a3a@news.Hawaii.Edu>
Source record: 81975
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

I've tried Chinese 6L6s in a guitar amp - not very good! They had a tendency
to flash over and didn't last very long. The Russian tubes are _much_ better
quality, but whether they do 6146s I don't know.
Yes, they still manufacture them......

The paints at least were bought by Lynn n0alo@southwind.net.
Believe he dais the inventory will be in place around mid August. Lynn
also does beautiful panel silk screening very reasonably. His charge for
a Ranger panel is about $70.

In trying to identify a viable source, my Fed agency tried a consignment of 50 Chinese 6146's. They we're installed in a Harris HF SSB rig for initial test. The rejection rate was over 90%, principally for low output. After the initial testing, we didn't go any further with checking GM or anything else. It just wasn't worth the time. Our depot was advised and they are now black-listed. We require a certification for country of origin for all tubes, now. I might add, too, that we also had a very bad/counterfeit bunch of hydrogen thyratrons a while back. They were marked made in England. A losing bidder gave us a tip and our IG found out they were Soviet tubes, counterfeit marked and branded, and not the correct type of tube. They weren't Svetlanas, however. We had gotten them from a well known supplier in New York. You'd recognize the name!!! Stick with USA manufacture!! They're worth the price, which is still not too bad.

For sale--

Eico 315 RF signal generator, 75kc-150mc, very nice condition, with intact leather strap. This is the model with the huge glass-front dial. The dial is 10.5 inches across and about 6.75 inches high with a smooth vernier reduction. All tubes, including VR-150, light up, but unit is being sold as is given its age. With original construction and instruction manuals, in very good or better condition. $50 plus shipping.

Heathkit resistance and capacitance substitution boxes, IN-37 resistance box and IN-47 capacitance box. Both look like they were just completed. The cap box is built around mylars and not Black Uglies. Original manuals, both in like-new condition. $12 each plus shipping or $20 for both plus shipping.

For Sale: please EMAIL DIRECT to:olds98@together.net for info thanks

-Military I-177-B tube tester with MX-949-AU plug in unit. Olive drab
metal cases. usual scratches on cases but the face
plates, knobs, meter etc are MINT! A real collector
unit for tester folks. Includes 2 manuals. Works
perfectly. $185 plus ship for both.

-Sylvania Model 140 tube tester, metal case, works great, includes
roll chats, manual and update sheets. usual scratches
on the metal case but inside is excellent.
$60 plus shipping.

please email DIRECT to olds98@together.net for info thanks RHAnderson

Message-ID: <3791D219.34EC01A0@earthlink.net>
Source record: 81890

For Sale - T-368 & R390A

The T-368 is in clean, good condition and works fine. Only problem is the left handel on power supply is damaged but can be repaired. It is on the original shock mount frame with casters installed.

The R390A I bought as a "Working" unit, but when I recieved it it was missing the antenna relay. Appears to be complete other than that.

I am located 45 miles north of Houston, TX at Lake Conroe. You need to provide for shipping or pickup if interested, I have no way to do this now.

I am asking $700.00 for both of them.

I also have the AN/GRC 26D COMO shelter they came out of, with the watt meter and antenna tuner if interested. It is designed to go on the back of a 2.5 ton military truck but fits well on a tandem axel trailer. Makes a good ham / feild day / emergency shack. $1200.00 for this.

If interested reply to qru@juno.com or call 409-856-4573 & leave message, I am usualy home after 6:00pm cst.

Regards

Larry Lowry

Hello Folks:

I was in the right place at the right time to get a Kenwood (Trio) 9R-59D receiver. It does have output, but severely diminished sensitivity. This radio is in very good physical condition and is a candidate for a little time on the bench but I need some documentation.

Do you have a copy of the manual and schematic you can copy for me?

Your assistance is appreciated. Costs associated will be covered.

Lee Smith

Phil - I'd hold out for $75 although it is probably worth $110 if you part it out. Fair Radio sells the IF deck (with mechanical filters) for about $100 (not that they probably sell a LOT of them at that price!). It'd be a shame ot part out a unit that actually has a serial number plate, though.

If you get the beast home, try some Wesley's Bleche-White (whitewall tire cleaner) on the front panel - this works wonders at stripping nicotine, congealed eggs, etc. It also will attack paint somewhat so make sure you rinse it off. The R-390As had nicely painted panels that hold up very well to this stuff, however. Toothbrush the stuff into the engraved lettering to turn it white again.

Good luck and 73 - John

It would be worth $75 as a parts set. I think I saw one advertised in
the latest ARC for under 200 -- clean, working, etc. The big problem
with these beasts is buying one at a distance, the shipping is a killer.

20$ and a weak moment resulted in dragging a Valiant 1 home from a flea market. Looks pretty clean inside but it has 2 AC cords coming out, one from 2 little ceramic insulators that look like the TR socket on a Valiant or Ranger but farther apart. Haven't taken it out of the case yet but wondered if the 2 plug scenario makes sense at all or is just yet another interesting mod to overcome. Thanks, Scott (and how do you get on the BAMA manual site now, it seems to want a password?)

Thanks for the tip about the cleaner. I could swear that this lettering was painted on, not engraved. I looked pretty closely, since I know how expensive it can be to have someone silkscreen a panel with painted-on lettering. I could be wrong, though. Engraved lettering sure would be easier to do with.

>Phil - I'd hold out for $75

I think I will do that. It's tempting to buy snap up a local set to avoid big shipping charges. But there's no harm in waiting for one that either works or has some known set of problems that I know I can handle.

Thanks for all the advice.

Phil

FS High Voltage Electrolytic Capacitors

Still clearing out all the odds and ends to make room for the new products.

The following capacitors are NOS(new old stock) Mallory CG(computer grade) types. They were bought in bulk cases so they are not in boxes and do not have the lug connector screws. Prices are 30% of current retail price. Just the thing for tube amps using high energy storage power supplies.

I also some NOS capacitors that still function perfectly but have dents from moving. Great for test rigs
or test equipment, offered at 15% of current retail price.

630uF 400 VDC, 2.0" diameter 4.25" high, 10 exc condition at $ 6.00, 8 dents at $3.00
800uF 450 VDC, 2.0" diameter 5.25" high, all in excellent condition 53 ea. at $7.50 each
1900uF 450 VDC, 2.75" diameter 5.75" high, all in excellent condition 9 ea. at $14.52 each

Nichicon Snap type(circuit board mount) NOS capacitors. Came in case no individual boxes.

330uF 400 VDC, 1.25" diameter 2.0" high, 158 in excellent condition at $ 3.00 each
330uF 450 VDC, 1.5" diameter 2.5" high, 412 in excellent condition at $ 3.90 each

GE Greenkeyers,

If anyone is within driving distance of Central Louisiana and would like a pair of full height Model 28 KSR's, please get in touch. Otherwise they are going to the dump since the XYL has said either they go or the hobby goes with them. Your cost is four cases of my favorite beer.

I also have a full ASR console available which needs minor work and is a good candidate for light tinkering and cleaning. I cannot give this away as I have too much in it but will consider trade offers of 4x250's, 4-400's, Dovetron TU, etc. Could use another R1051 receiver.

I'm going to hold on to these for 30 days and then out they go.

73, Doug

The following "cherry" Heath SB series gear, with manuals and cables,
operational and in excellent shape (no scratches, built by an engineer,

kept well maintained)

SB-101 + HP23 power supply + 2 spare 6146 tubes in boxes+ driver tube
SB-620 Scan adapter
SB-610 Scope
SB-630 Console with digital clock SWR & patch
SB-600 speaker
HM-15 wattmeter

2 spare SB 610 scopes, with cabinets
1 homebrew RTTY adapter built into SB-series cabinet,
with SB series knobs, probably ARRL handbook project. Nicely done.

For the whole enchilada, a matched set ready to happen: $600

Stan and CB newsgroup,

I too have had a rather unpleasant experience with this individual !!! I see Rob is using a new Email address!!

Several months back, he advertised some 8950 tubes for sale at a reasonable price.
I contacted him and sent him the money. After about 2 months of me trying to contact him via Email and snail mail, I sent him a registered letter informing him that I will pursue legal actions against him. Lo and behold he finally sent me the tubes (which were very poorly packed and very lucky they didn't break!)!!

Stan, if I were you, I would contact the District Attorney, the County Prosecutor, and the
Postal Inspector involved. I would be careful about contacting his personal circle of contacts, which would jeopardize you to legal matters concerning Defamation of Character! (God Forbid).

What Mr.Long is committing, is indeed mail fraud which is a "FELONY" READ THAT ROB! FELONY!!!! I'm sure BUBBA is just waiting for you!!

So, yes, for the rest of you, DO NOT DEAL WITH ROB LONG !!

BB Wolf out.

DO NOT DEAL WITH ROB LONG (a.k.a. drgn@antigopro.net) !!!!

You will subject your self to much grief if you do !!

He has a very bad reputation of trying and succeeding in Ripping folks of
here on the newsgroups!!

He is from Pearson, Wisconsin.

Yes, the Postal Inspector does have actions pending on Mr.LONG.

The one coming out of the ceramic socket is (in all probability)110v ac for the antenna relay. That's pretty cheap for a Valiant. The knobs alone are worth 3 times what you paid!!!

Ka9p wrote:

I just got a Lafayette HE-10 (KT-200) and an article describing a mod which allegedly increases the gain and sensitivity and stabilizes the oscillator. I'm all set to make the changes, but I don't have a soldering iron. A friend of mine (and former ham) recommends going with a large (75W) iron. He says that it's safer to use than a 30W, since you heat the wire up quicker and can therefore solder your joint before the heat spreads to the adjacent parts. However, the recommendations I've seen on this list all seemed to be for 40W irons. Any pros/cons? Will I be damned to Radio Hell for hacking a 40-year-old receiver?

If you are making small wire contacts, then 30 watts is plenty... it you
are soldering to chassis ground etc then a higher wattage gun would be
MUCH quicker...If you are using it to solder to ANY circuit board , 75
watts will probably lift the trace right off the board, especially if it
is 30-40 years old... I normally use a 25 watt Weller Soldering station
, occasionally a 40 watt station and use a 100/150 watt Gun for Chassis
and for Coax connector soldering... A higher wattage gun can also cause
the flux to burn or evaporate too quickly and you can be left with a
poor solder connection ... 73 de Jordan...

The KT200 was my first ham receiver. It is not a particularly good one!
Would be a fun radio to cruise around the shortwave bands with.
I believe TRIO was the original supplier of the set to Lafayette.
While it is not a rare or expensive set to find, it is collectable, and I
would advise
against performing "hammy" mods on the set. Leave it stock, or find
something that is better suited to your needs. I doubt any simple mods
to the 6BE6 mixer will produce earthshaking results.

I have a Collins KWS-1 transmitter for sale for $1800.00 I will try to get some pictures of it on jpg on the next couple days. It looks good and was working when purchased 3 years ago. I have not had time to even fire this beauty up with working 12 hrs/7days really eats the time. It has a 4 to 1 dial and even has the original key for the front lock on power supply door. I am moving and I want to downsize some of my stuff before I move. Thanks for looking and e-mail me with further questions. Oh yea, I live near Detroit, Michigan and I really would like to not have to ship this beauty. Thanks and 73' DE AA8WL Sam

Here's a cosmetically beautiful HQ 170, no scratches, all original knobs, no clock, but with manual and matching speaker. Problem is, it doesn't light up. Checked the obvious: it needs a new power transformer. Don't have one. My loss your gain: $125 for the receiver and speaker (speaker is worth $40 or $50, so this isn't a bad deal. Figure on shipping from Kansas City area.

Hello, I have the following transformer literature that is out of print,
and very hard to find. They have a great wealth of often needed
information, and identification. These are very high resolution LASER
monochrome reprints of the originals. All are professionally
done with original style binding. All sales final on literature,
and I'm sure you'll be pleased. All prices are firm, and
INCLUDE POSTAGE, in the continental USA. Others by rate.

TRANSFORMER BULLETINS/CATALOGS/MANUALS:

KENYON "Quality transformers",23 pages,has some writing in numbers
on the front cover by the original owner,but a real information
getter. Covers ALL transformers available in Dec.1st,1941.
Even has the "blown in" price update sheet! Price $9.00.

PEERLESS Transformers, Catalog 1948 - 1,original owners name
on upper right hand corner, nice info, not perfect but nice,
Price $8.00.

SNC Transformers, January 1, 1947,13 pages plus original owners name
spelt on upper right hand corner,beautiful copy, has "blown in"supplimentary
catalog page,price sheet, and August price update sheet! Price $8.00

STANCOR Essex #2069,42 pages, a REAL NICE MANUAL/CATALOG,has EVERY thing!
A real good info source,Price $10.00

STANCOR Essex Catalog # 140 H, 21 pages plus Numerical index and
October 1, 1948 price update list, very nice, $9.00

THORDARSON "Transformers by Thordarson, No. 400-FX 1942, A beautiful
source of info, 27 pages, Price $9.00

THORDARSON 1941"Tru-Fidelity by Thordarson, an UNBELIEVABLE catalog, real
nice pictures of early Broadcast transmitters and an excellent source
of audio info, 19 pages,real nice. Price $10.00

UTC Transformers, reactors, filters, Catalog# 500,looks like early 40's
another real nice, illustrated Catalog/manual, 22 pages, Price $9.00

UTC transformer components, Spiral-bound Excellent catalog/manual,
really in depth, Bulletin# PS-405,)ct. 15, 1941, includes "blown in"
price update for Dec. 6, 1946.Another excellently illustrated info
source, 34 pages, Price 11.00

EITEL-McCullough's "THE CARE AND FEEDING OF POWER TETRODES", 1951
25 pages crammed full of information IN DEPTH! Has everything you
ever wanted or needed to know about running these tubes, a real
nicely illustrated easy to understand manual, Price 10.00

Thanks for reading, if you need to order,
Please respond to my mailbox...
Thanks, Joe Pratt,

Doug,

ur too far away for me to come and grab them...but sure hope someone
does...those machines, like our famous R-390x's are a vanishing
legacy...and well worth trying to preseve for the genious inherent in
there mechanics...

Again...sure hope someone can pick them up and give them a home...maybe
even driven by a pair of R390x's in diversity...what a sight, sound, and
smell...yep! nothin' like the smell of warm radios, and hot RATTs to
warm a cold winter night while reading some dx news service...

Somebody reach out and grab those things...!

73,

Gene

ebay ads have screwed up many newsgroups. ebayers post their teaser ad
to newsgroups with total disregard that most are for discussion and not
for ads and have turned many newsgroups into mostly nothing but a place
for their ads so they can make an extra buck.

Geeeeez! For $110 just buy the damn thing! That's a very good price for a unit in complete condition (except for the meters and knobs). Especially good price since yopu don't have to pay shipping from Ohio for a pig-in-a-poke. Why would you be interested in it's history? Mostly just "built a long time ago, had the shit run out of it by the military operating it 24 hours a day for 20 years, sat in a shed at the repair depot for another 10 years, wound up in some surplus dealer's shop for $15, sold for $250 to someone who used it for 10 years, got divorced, and his -ex sold it to the flea market for 20% comission". Did I miss anything?

The knobs, fuse holders, and dial lock assy are available from Fair Radio for pocket change. Of course, like all R390s, you'll have to tear it apart & rebuild / align the rack and gear train, but that's usual for all of these. You'll probably find a few broken gear lock clamps, but Fair has them as well.

Good Luck!

Don

Hi all...

I've got a photocopy of the manual for my SB-614, but sadly there's no schematic in it. I need to repair my monitor, and it's REALLY hard without the schematic.

Would some kind soul out there be willing to photocopy their schematic for me? I don't mind if it's on two sheets that I can piece together, as long as it's the whole thing. I'll be happy to pay for the costs and your trouble.

Thanks in advance, and 73's

I too have a HK 'SB-614' without manual or schematic. Mine is working, but
I would like to increase vert sensitivity. I tend to run under 50 watts on
ten meters with my Drake TR-4. Any info on how to increase vert sensitivity
or sell me the manuals would be of help.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Greetings.... I am wondering if anyone has any words of wisdom using an HT-33a amp with modern solidstate transcievers and how you hooked it up... I have had one for several years that a friend gave to me that had a bad bias,filament,etc transformer when he gave it to me. One can be had from peter dahl for less than $100. what has your experiences been with it and is it worth keeping around and using....should I strip it and use it for parts for a more "modern" design amp? I am assuming of course that the rest of the amp is ok. High voltage is right up there and all and everything else seems to be ok, even the tube (PL-172). Any info would be appreciated.

Thanks
Tim KB1MM

On or about 4-02-99 I sent $28.00 to R.Long AKA "dragon" or drgn@antigopro.net and address N11310 East Shore Rd. Pearson,WI.54462 After not receiving what I paid for (an original manual for a Tram D201) I contacted mr. Long via email several times.At first he said he sent it to the wrong address (he emailed me back and had the wrong zip code on it).He ask me to wait to get it back....after 2-3 more weeks of waiting I again contacted him via email and he told me he would send me my $28.00 back. After that never happened I contacted the post office and started a mail fraud case on him.I paid with a postal that he has cashed. Now after 3 mo. and not receiving my money or the manual I figure I will ask the rest of you to watch out for mr.R.Long.Ad if you have been burned by him to contact your local postal inspector and ad your case to "his" file.Maybe we can get our money back or at lest make him pay with a fine or jail time. If anyone has a good phone # or place of work,etc.on mr.Long I would like to have that info. I would like to tell his boss,wife,boyfriend,kids,disability worker,etc.about him being a thief.

Take care,
Stan Clewett (530)241-0843

Hi Tim,

For what its worth, I also have an HT33A with exactly the same bad transformer, and I have bought, but not yet installed, a replacement transformer from Peter Dahl.

I think you will find the HT-33A is an excellent amplifier as-is, without any modifications. The PL-172 is extremely rugged and will handle 1500W input power with ease.

The biggest problem is the HT-33A has a 110V primary; there is no provision for 220V operation, so you may experience dimming of lights as the line voltage sags on voice peaks. This might not be a problem, depending upon how "stiff" the line voltage is in your house. One way around it is to use a 220V/110V step-down transformer and run 220V to your operating position.

I hope you go ahead and use the amp as-is. I would like to compare notes with you on operation, etc. if you do so.

I need to get my a-- in gear and install the transformer in my HT-33A, it has been sitting on a shelf for almost 2 years waiting for me to get around to it. Perhaps now is the time!

Source record: 81741

For Sale - T-368 & R390A

The T-368 is in clean, good condition and works fine. Only problem is the left handle on power supply is damaged but can be repaired. It is on the original shock mount frame with casters installed.

The R390A I bought as a "Working" unit, but when I received it it was missing the antenna relay. Appears to be complete other than that.

I am located 45 miles north of Houston, TX at Lake Conroe. You need to provide for shipping or pickup if interested, I have no way to do this now.

I am asking $700.00 for both of them.

I also have the AN/GRC 26D COMO shelter they came out of, with the watt meter and antenna tuner if interested. It is designed to go on the back of a 2.5 ton military truck but fits well on a tandem axle trailer. Makes a good ham / field day / emergency shack. $1200.00 for this.

If interested reply to qru@juno.com or call 409-856-4573 & leave message, I am usually home after 6:00pm cst.

Regards

Larry Lowry

822. McElroy Hand Key

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-20 00:00:00 UTC
From: Steve Fried <k2pts@home.com>
Message-ID: <3794848B.9EA14BA2@home.com>
Source record: 81747

This message is intended only for key collectors and rivet counters, only.

I have a McElroy J-38 in like new condition. Please see Tom French's McElroy book, page 121 and fig. 12.6, for reference. This is one of the 1700 keys made in the 1960's for the Army Security Agency. The McElroy name is molded into the frame.

This key is available for $150 postage paid in the U.S. (It has never been in service as far as I can tell)

If you are not a key collector, a regular J-38 made by Lionel will do just as well for about $25 or so.
The keying characteristics of a Lionel $25 key is just as good or better than the McElroy, in this case.

However, for the collector, a McElroy J-38 is a wonderful addition to the collection.

Regards,

Steve
k2pts

ps. Will trade for Vibroplex Zephyr or McElroy stream key with nameplate.

This radio dosen't have any circuit boards. The KT-200 was my first
receiver, made in Japan and not a bad little radio. A 40 watt iron will
do just fine, you don't need all that extra heat.

I have found a Hallicrafters S-53A.
Thank you. Peter

834. Re: Question about Hallicrafters setscrews for knobs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-20 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <932535330.972.75@news.remarQ.com>
Source record: 81759

I don't know about the SX-71, but my SX-42 has two kinds of setscrews. The smaller knobs are secured with small Phillips-head screws, two setscrews per knob. The big tuning knobs are secured with 5/64-inch hex screws which are located at the bottom of narrow holes -- making it difficult to get the wrench in properly.

Looking at a not-very-clear photo of the SX-71, the knobs with aluminum skirts look like the small knobs on my SX-42. The two larger tuning knobs look like they *might* be similar to the plastic knobs my S-40B, which also uses hex screws if I recall correctly.

843. Re: Info using HT-33a amp

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-20 00:00:00 UTC
From: davek2dp@aol.com
Message-ID: <19990719231036.10356.00000612@ng-fa1.aol.com>
Source record: 81836

Hi Tim,

I have not used the HT-33A, but am very familiar with the amp. If you use it with a solid state , modern rig as a driver, make sure that you key the linear PTT circuit with an external relay.....let your transceiver's "linear control relay" through a small 12 volt DC relay that would then control the 110 vac circuit in the amplifier. Otherwise, you will burn out the contacts on the relay in your transceiver.

Good luck (I have an HT-32B on the air)

>for hacking a 40-year-old receiver?
>
are you a glutton for punishment? You use 75-100 watt irons on a
printed circuit board, and two things happen. You create solder
bridges because the iron is too big, and you de-laminate the PCB, the
etch lines come off of the board... You keep irons that big well away
from printed curcuit boards. You want to bond braid to the chassis?
That's what you use a 75 watt iron for... You want to solder 10 gauge
wires together, that what you use a 75 watt iron for. You want to
solder 18-22 gauge wire together and not burn up the insulation. Stick
to a 25-40 watt iron...

I don't remember seeing it offered by anyone other than Lafayette at
the time. It sort of resembled the styling of the Hallicrafters S-38, only
larger with more controls and an S meter.

I recently discovered "Four-Aces Communications" way out on Main in east Mesa (Val Vista). Has anyone done business with this guy? He seems to cater to the CB-crowd, new gear and service, though he has a side room full of BA gear, a lot of older Yaesu, pre FT-101, some Collins, Dentron, National, Hallicrafters, Heathkits galore, Hammarlund, everything but Drake it seems. I ask the question because everytime I go in there, the owner/head salesman/repair guy seems to be in the middle of an argument with a customer, and has asked some pretty steep prices, even for *asking* prices (like $800 for a pair of Hallicrafters 2 & 6 xvrtrs, kind of dingy, chipped cabinets, and $400 for a very dirty caseless SX-28 and speaker, bad filament winding). Should I even be bothering to stop in to look his pile over every month? I'd really like to hear from folks in the area who have done business there, or at least been there. What do you think?

I would add, that the RAL is the finest regenerative receiver ever made,
bar none, for CW use. It has built in filtering for passband and
peaking, and has audio derived AGC. Dial calibration is only a 0-1000
scale.

If you want a TRF regen receiver to use on CW, there is nothing better.

I have run them for 30 years, and have had great service out of them.

Bob/NA4G

867. WARNING!! BEWARE OF ROB LONG (a.k.a. drgn@antigopro.net) !!!!

DO NOT DEAL WITH ROB LONG (a.k.a. drgn@antigopro.net) !!!!

You will subject your self to much grief if you do !!

He has a very bad reputation of trying and succeeding in Ripping folks of
here on the newsgroups!!

He is from Pearson, Wisconsin.

Yes, the Postal Inspector does have actions pending on Mr.LONG.

Most of the Hallicrafters used spline
socket set screws. You need a spline
set of or Bristol wrenches to properly fit them.

From: Spencer Ritchie <sfritchie@worldnet.att.net>
Message-ID: <7n54vigac1@bgtnsc03.worldnet.att.net>
Source record: 81780

I have the following items that I would like to sell:

Drake R-7A Receiver covers .01 to 30mhz continuous. The receiver has all the filters(2.4,1.8, ect) and is in good condition. I also have the original manual, and service manual, which I 'll include with the radio. The price is 350.00 and I'll ship.

The other is a Heathkit SB-101, with SB-600, HP-23a (mounted inside theSP-600) HM-102 swr meter, HD-1410 keyer, Electro Voice model 638 desk microphone. I have manuals for everthing, except the swr meter. (however I do have a schematic for it) Cosmetically all are in decent shape, and have the original paint. Also everything works also. (the vox on the sb-101 needs to be fixed. I haven't had the time.) I would like to get 225.00 for all, and would prefer to sell as a complete set.
I can be reached here or at 520-790-8361
Thanks,
Spencer KC2TX/7

Hi all,

I am in need of some assistance to transport an RCA BTA-1R transmitter from southern NY state to Seattle WA. I have contacted a number of carriers but all are more expensive than it's worth, so, I'm looking to any fellow hams who might drive trucks across the country that might have some spare room on one of your rigs to move this 1000lb rig. Please email me to discuss the details/payment if you are able to help me with this.

Thanks very much,

Paul Wende

880. Help Identify - Signal Corps BK-22-K

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-21 00:00:00 UTC
From: Marty Tippin KI0LO <martyt@pobox.com>
Message-ID: <7n5kih$b9g$1@nnrp1.deja.com>
Source record: 81787

Not sure what this is - any information would be appreciated - especially web links..

I've got a nifty antenna switch/relay that is marked "RELAY BK-22-K" on the sides and has a square stamp on the back that starts out "SC" - can't read the rest, but that tells me it's something from the Army Signal Corps.

The box is a combination antenna switch, antenna current meter, T/R relay. It has 3 antenna inputs which are selectable, then a 0 to 200 microamperes meter which I think can be switched to read forward vs reflected current. Finally there is a Dowkey relay to switch between the receiver and transmitter. There are two jacks also - one to power the relay and one for the relay's external contacts. It's all housed in a fairly heavy cast aluminum shell.

Any clues as to the origin, use, value of this item would be appreciated.

73,

-Marty KI0LO

Will,
given the crowd he caters too, I don't think its really worth the drive.

There are probably other (better) places around town, but they
seem about as easy to find as hens teeth.

however, if you want a good radio equipment dealer,
you could try appollo communications on 43rd Ave and northern.

Hi Guys;
Heres an unbuilt Heathkit VOM, all there but unfortunatly the Meter itself was lost due to carelessness.
Anyway, you might have a junker with a meter and heres your chance to get a Real HeathKIT.
Please Check out this URL with picture.
Its only at $52 with less then one(1) day left!
Thanks es 73.....RICH-WA2RQY RLUCCH2098@aol.com

895. More son of soldering irons

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-22 00:00:00 UTC
From: dxguy@earthlink.NET
Message-ID: <3796E3E9.C1@earthlink.net>
Source record: 81708

250 Watt soldering iron!!??? Geeeez. What kind of sissy uses such a dinky iron. Look here, son. If you're really ready to make the mod, and all you need is a soldering iron, just go to Home Depot & talk to the guys in the electrical department. They showed me how to change the filters on my S-line Collins, real good! Just stop by the plumbing counter and pick yersef up a propane blow torch. Use acid core solder and a really hot flame. It solders even more quickly than instantly, and everbody knows - gas is better for heating than electricity. Be sure to get some of that 12 gauge wire to replace all of the bitty little Japanese wire in ahat set. It'll run real good then. If you can't get the 12 guage wire, stop by WalMart and get a 12 guage shotgun, and set the radio up in yer back yard, and just blow the shit out it! Same difference.

Thanks for the troll.....

Don Davis

897. FS: NC-183D/Speaker/NBFM $200

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-22 00:00:00 UTC
From: cjg
Message-ID: <37971755@news3.us.ibm.net>
Source record: 81710
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.shortwave

National NC183D, with matching speaker, NBFM adapter, and manual copy. $200 plus shipping. Prefer local pick up (Southfield, Michigan), would drive up to an hour to meet someone half way.

*Keep in mind that shipping will be at least $40 since UPS in my area *requires* foam in place packing on all electronic equipment, and the radio and speaker will require two packages (although the speaker could be shipped double boxed in peanuts).

e-mail any ?s, inquiries cgalbraith@ibm.net 73 de Chris, KA8WFC

Here's the deal:

The radio and speaker are in very good to excellent physical shape, with a few minor scratches on the case. I'd conservatively rate the radio and speaker a 8.5 on a 10 scale.

I have replaced the power transformer replaced with NOS Stancor PT (originals leaked black goo!), replaced 95% of the paper caps, replaced the RF gain control (with NOS A-B), tested all tubes. Radio works and receives well, IF in good alignment, RF may need some tweaking above 20 MC.

After playing with it for a couple months, the BFO has become intermittent. It doesn't seem to be a tube, so I am thinking it is probably a capacitor inside the BFO 'can', but I am not sure.

898. B&W model 851 coil assembly $45.00 shipped

Newsgroup: rec.radio.amateur.boatanchors

I don't have that problem. If properly conditioned with solder, it
shouldn't blacken all that fast, unless you are talking about leaving
it going for a long time. I think I'm using 60x40 solder but really
shouldn't matter all that much. If I have some handy, I will just jab
it into paste flux (I use paste flux constantly with smaller irons).
Of course, a wet rag will usually clean off any blackening. I got into
a habit, years ago, of running a little solder onto the tip after the
iron was unplugged, usually leaving a glob of solder. I think that
helps, too.

902. FS***TenTec 540 and keyer $250.00***

Hello, group. Some unfortunate circumstances make it neccessary to sell off many of my Hallicrafters receivers (about 20 or so). These run from a nice SX-96, through most all the S-38's, an old Sky Buddy, some "domestics" etc. Anyone interested can email me for details/list/scans before I have to put them on the infamous "auction" next week. Here's the "snag" - I'm located in Canada, so shipping costs will be an issue. I'd love to sell them all as a package deal (wishful thinking :-)) but will consider any reasonable offers, after you've asked all the questions. Hamish.

Is it an American Beauty soldering iron? I've never had one that high
wattage, and the only references I can think of to the soldering irons
of that era (you have to admit that they are fairly a relic from the past,
except for a few occasions today) were mentions of irons made by or named
"American Beauty".

You wouldn't want to use one for everyday use. But if you need to solder
something to something that will suck the heat away, the only way to do it
is with sufficient heat.

No Lids, No kids, no Space Cadets.

Joe and guys -

My god, I was reading your Collins ad (and drooling) when I came to your last phrase. Brings back a flood of memories - when I was a kid, and then through college, that was the war cry of Mike, W2OY when he called CQ. He lived in NY or NJ somewhere, and said he had a rhombic - he pinned my unpinnable s-meter. He must've been running about 5 KW. But he got on 80 meter AM, on 'his' frequency, and refused to move. He talked only to his buddies, and also refused to acknowledge phonetic calls.

I heard he had a seizure or something one day at the rig, brought on, no doubt, by lids, kids, and space cadets.

It's a tad off topic, unless you consider W2OY as a classic boat anchor, but does anyone else remember him? This would've been in the late 50s and early 60s.

73 to everyone,

Dan W2IQD

Hello Folks:

I grew up in southwestern Ontario....about halfway between Detroit and Buffalo if you drew a striaght line between the two. I used to listen to old Mike very regularly. One of his absolute favourite things to hate was SSB when it was becomig popular. He used to rant for hours about "The Donald Duck Crowd" that was invading and ruining ham radio.

It used to be a delight to listen to him fend off anyone who seemed even the slightest bit simpathetic to SSB....even if they were running AM....because after all, he wouldn't even acknowlege a call from a sideband station except to become volatile! Being anything less than a true dyed-in-the-wool AM Man ranked up there with being a Commie Sympathizer that probably listened to Radio Havanna Cuba at night.

I don't think they make 'em like W2OY anymore....a true curmudgeon's curmudgeon. In his defence, he used to have a whale of a signal into Ontario, and the audio quality was always just super....you'd swear he had commandeered a Voice of America transmitter for the day.

All the best.

Lee Smith

The problem is all of the multiple scales on the missing meter were
calibrated to work precisely with the circuits and switching mechanism
in that particular heathkit vtom. It would be difficult, if not
impossible, to find a meter to match your circuitry. Not to mention,
the meter is, by far, the most expensive part in that kit.

Message-ID: <3797B0C0.C362DAF1@ziplink.net>
Source record: 81733

Hello gang: My NC-300 has developed a intermittant audio cut-out. Audio will immediately drop to a negligible level, then after a short time, jump back up to the level I had set.

Anyone with an NC-300 have experience with this condition?

Thanks,

Bob, W1CNY

922. Looking for UHF MASTR PRO receiver strip

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-22 00:00:00 UTC
From: Joe K7JOE <k7joe@yahoo.com>
Message-ID: <3797AF87.D459AD4F@yahoo.com>
Source record: 81735
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.vhfuhf

Hi,
Just a wild shot, but I'm looking for a spare UHF GE Mastr Pro receive
strip. Prefer one that is pre-tuned to the amateur band (exactly on
446.0 Mhz) with a crystal (not icom) board and possibly
a GaAs FET front end. Minimum sensitivity needs to be 0.25 to 0.3
microvolts,
no more than that. Needed as a backup for my UHF repeater -- I have
several different models, but cant seem to get the strips that I have to
tune with
any reasonable sensitivity or selectivity (best I can do is around 0.9
to 1.0 microvolt).

This is GE MASTR PRO, not MASTR II receive strip. Think the model is
42ER41G or
something like that.

Pay cash or willing to trade MASTR PRO transmit strips, tubes, etc in
either VHF or
UHF range. Also have a few untested audio mixing shelves, repeater
power supply
chassis, etc (all MASTR PRO).

thanks,
Joe K7JOE

Sorry to be out of line for the NG cops, but I normally operate Collins (there's the BA tie-in) and have been tasked with the installation of a TS-870S at the office which uses a computer interface and software to control the freq, mode, audio, etc.

I am totally unfamiliar with this stuff....in fact have tured my back on it! Now I find myself on the vertical portion of the learning curve on this project.

Can anyone suggest a site more appropriate to find someone who will share how this stuff is supposed to work?

I sure never though I'd get the response I did to my "FS" on the Halli's.
Thanks to all who wrote (all 40 of you!) I'll try and get a personal note
off to each of you asap.
A quick list: S19R, S41W, S41G, SX96, S120A, S118, SC77A, S38 through "E",
ATCL-5, 51C1, 5R40, 5R34, 5R100, R46B spkr. As you can see, nothing too
"exotic", but maybe a "filler" or two to add to your collection. Email for
more details.
Cheers! Hamish.

GM everyone,

I have a Collins 32V type PTO that I need to set up as an external VFO. Hence the problem and request: I am looking for a dial mechanism and case, Collins quality or better, to use with it. Will consider a parts unit and have thought that an old R388 or the like might just do the trick if the Khz dial, escrucheon, knob, etc are still in tact. Better, an old Collin xmtr or exciter with enough present to be fashioned into my VFO. Does anyone have something on the shelf going to waste that would possibly fit the bill? Please respond by private email. Thanks & 73, Doug.

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=135770230

and the blurb is

This is a near-mint example of the venerable E. F. Johnson T/R switch. A "must have" to complete your boatanchor station. This one has a very small amout of corrosion on the case - about 10 small "pits" scattered around that will polish out (I tried one and it came right off) to give a near-mint condition finish. The internal chassis has absolutely no corrosion and the original rubber feet are still spongy and crisp. The cord looks brand-new; may have been replaced at some time but I've had it for 10 years and I didn't replace it so it may well be original. Comes with copy of the manual and a few miscellaneous handbook/magazine reprints that I accumulated over the years on the subject of T/R switches and their use. You would be hard-pressed to find a better example of this classic boatanchor accessory.

Closes 8/1/99.

Thank-you.

947. WTB: QST Issues 1942 Through 1945

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-23 00:00:00 UTC
From: tony@bright.net
Message-ID: <3797bea0.41315552@news.bright.net>
Source record: 81661
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hello,

I want to purchase some of the wartime QST issues that i have never read, specifically those between 1942 and 1945. I'm NOT a collector, so I would be glad to buy single copies, spares, copies in less than perfect condition, etc....these are for educational and research purposes, not for display. I'll buy duplicates, too, for the ads (I like to frame 'em).

Please let me know what you have available and your price. I have some issues from the 1950s and 1960s that I could trade, if interested.

Thanks!

73,

Tony Schroeder N8SNC

No. but I suggest banging on reciever, and seeing if it
is just a bad solder connection.

FREE - but you have to pick it up in Bedford, Massachusetts.

I have a loudspeaker which I have not used for years. It is not a true Hallicrafters, but my father made the cabinet to fit aesthetically on top of my SX-43. I think it is 8 ohms, and I used it with a small transformer (long since moved to another project).

I have the following Radio, and electronic equipment for sale. Will consider trades for other Electronic or computer related EQ. All working last time tested unless noted. Shipping is extra. Please reply to my email address. Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $125

Non Tube Items:

Marantz Model 2220B: 25 year old Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $150 for both or trade for portable 800 scanner that can receive Cell.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

A while back, someone was looking for a replacement screw for one of the four that hold the clock (or blank panel) on an HQ-170. I've located a source for them. If you have a Lowe's (home improvement) store in your area, they have a new supplier of screws, bolts, etc. and that line includes an oval head Phillips #4 machine screw witch is a perfect fit other than the length (new screw is 1/2" long). If you don't have access to a Lowes, send me your address and I'll send you one of the original screws.

I have a restored KWM-2A Wing. It is working fine and makes 90 to 110
watts on the various bands.

The cabinet is a re-paint, the main tuning knob is a re-make althought it
looks like the real thing and is new. It has new feet, a new trim ring,
several new tubes, new knob centers. All knobs are orginal except as noted
and there are some minor touch ups on the front panel. The chassis has been
cleaned with Windex and Q-tips and it has not been washed. The serial number
tag is gone but I suspect the radio to be a
late wing in the 15,000 to 19,000 range. It has the open relays.

It is actually a nice looking radio and works the same way, Presently it is
powered by a PM-2 supply on the back. Price with the PM-2 is $850. The
PM-2 has not been painted and has a few scratches.

Price with out the PM-2 is $700. If you don't like it you can return it.

I pack, you pay for shipping.

Can be that (cold slobber joint).... can be a dirty pot... or could be a corroded connection at a tube and tube socket.

First is the audio really dead or is there a 60 cycle hum and no other audio..?? If so, the audio stage/speaker is good and the problem is further up the chain. If you move the vol pot does it come back? If no, then slowly rock each tube to see if it comes back.

Had the same problem with a HQ-180. An IF tube had a corrode pin - a little pen knife action on that pin cleaned up the problem.

Good luck and let us know if that fixed it -

Biz - WD0HCO

Hi All,

I found a R-174/URR at a yard sale today for very little cost. It looks like a good general purpose mobile radio covering 1.5-18 MHz and came with a homebrew power supply/audio connections. Looks like it should have a second unit below the receiver as the receiver is environmentally sealed everywhere except for the bottom where there is a trapezoidal hole centered on the back edge of the unit.

Anybody have any information about this radio?

As always, thanks in advance for the help and keep 'em glowing.

Rob

It's sure not an HRO 5! National never made a 2.5V filament tube set after
1939-1941. HRO 5 is post WW2.

I have the following parts for sale as a package only for the SB-1000 amplifier by Heathkit:

1. Filter cap board with all caps, equalizing resistors, and meter multiplier resistors in place. Removed by me from an SB-1000. 100% functional. Caps are Mallory CGS211T450R4C. 210 uF 450 vdc, 525vdc surge. Total of eight caps.

2. ALC/Power board. All components in place. Removed by me. Works 100%.

3. Rectifier board. Total of ten 1N5408 diodes with equalizing caps accross each. works 100%.

4. Meter board. Only component left on the board is the meter multiplier switch. All other components were removed.

Sell as package only for $95 plus shipping from San Diego 92139. Pls include ur zip when replying.

I want to buy a Scott receiver made in 1941 and used on ships because
of its shielding properties prevented enemy pick up of local osc etc
radiation.
These were (short wave low radiation)SWLR or maybe just (SLR)
I want to use it on shortwave(ham AM).
Where can I get information either on the net or books etc?
Thanks,
Paul Thompson w0od

Bob:

If you get any replies directly, could you post them here? I'm always looking for "kindred spirits" to talk BA's on the air using SSB, but usually have to wade through about 15 contacts before I finally get somebody using decent good old equipment that can actually still tune a transmitter!

I never thought it would be this easy to become a curmudgeonly ham!

HQ-170A = Ham Bands only. Standard is 160m through 6m. There is a rare HQ-170A-VHF version that has a nuvistor tube preamplifer/converter. This covers 160m through 2m.

Source record: 81491
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Hi Gang:

This is not the famous CY-979 cabinet (unfortunately) but it is a nice

metal table cabinet that used to house a microwave test set and will house a R-390/390A, SP-600 or other radio of its size class. It is panel opening is 19" wide by 10 1/2" high. The cabinet will accomodate a chassis that is 15 1/2" deep. There is a top cover that is removable and there are handles on the top of the cabinet. Inside there is a muffin fan that could be removed if you want but it shouldn't interfere with the fitting of a receiver. It could use a cleaning up but is in nice condition. I'll trade or sell it for $60.00 plus UPS. Please reply by e-mail if interested.

Bob:

Your post didn't show up on my server until Chip posted his views. So, what really appears to concern you most is that you don't want to be paying what the equipment is worth to somebody else if you want it badly enough....do I have the right take on this? If so, how is this different than standing at a table at a local ham fleamarket dickering with the seller when there is somebody standing behind you wanting the same item for the original asking price and says so?

Unlike you, I enjoy looking at Ebay sometimes....I know that has immediately identified me aa being jerk to you....I have bought several pieces of broadcast equipment from there and have been happy with the price I paid, or I wouldn't have bid and forked over the money. I use it in my FM broadcast station and have found some pretty good deals.

It could be argued that by your posting how much Ebay and other auction formats disgust you, sending you into a wild-eyed, mouth-foaming frenzy that you are wasting bandwith as well....that is if I were on a debating team and was assingned the "In favor" side of the proceeding.

Lee

1055. Collins 51J-4 info requested

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-26 00:00:00 UTC
From: "Eric F. Richards" <efricha@flatland.dimensional.com>
Message-ID: <Xq0n3.4444$Pt1.1231@wormhole.dimensional.com>
Source record: 81499

Greetings, all...

A non-ham (so far) friend of mine has obtained a Collins 51J-4 that seems to be in excellent condition. Minor corrosion on some internal screws, all but one tool in their holders, no scratches, tunes like a dream, etc.

I'm not a BA collector -- I've drooled over many a 390A at hamfests but simply don't have the room in my apartment for them. So, I have a few questions for the experienced BA collector.

o What's the current school of thought on restoration? There are a couple of suspect capacitors and the corrosion on the screws. He's treating it as a "leave as-is" for now.

o Any recomendations for a professional restorer or someone who can align the thing?

o While the receiver is in good shape, the tabletop "rack" has one ding in it. should that be left as is, restored, or what?
It is also missing the rackmount handles... where would he find them?

o Filters, filters, filters... where can the 1Kc and 6Kc filters be found? How much?

o Where (or who) is a good source of info on the 51J-4?

I'm sure I'll think of more as soon as I send this... I've already threatened him with bodily injury if he dares to lubricate anything so _that_ issue is dealt with... What else should I be asking? :-)

Thanks in advance!

73, Eric, KB0YDN

(Oh, unrelated BA question: Anyone know where I could find photos of the Knight Span-master and Lafayette Explor-Air online that I could copy for a web page? (with permission of original owner -- NOT taken without asking.)

I dont want to start a hornets nest here so let me explain something that made me mad.
Last week on EBay someone was offing a SB-101 set They claim it was from a SK estate and knew nothing about it. On separate posts on the same date was the SB-600, HP-23b, and manuals all separately.
I doubt that's what the SK had in mind.

You just knew the guy was full of cr*p not knowing if it worked.
If I wanted the set I would have to outbid all posts and get a radio that Im sure had a problem.

Yes I know this has been going on for ever in different forms (some sellers are *VERY* fair), Some pay a unknowing family member $1.00 per pound on Gramp's working SB-220.
But these greedy multi spamming F*cks have gotten a little to piggy through this new tool called *On Line Auction's*(how's that)..... and deserve to be dumped on (Without wasting to much of this NG that is)
Joe..........Greeting's from N.Y.C

Joe:

We are perfectly zero-beated on that aspect.

Thanks for expressing your thoughts in a lucid manner, indicating some depth of thought process.

Unfortunately, there are some true "scum sucking buggers" out there and we should be wary of them and expose them whenever they are found out. I submit though, that they are in the miniscule minority when al the transactions of the year are tallied.

That is not the fault of the medium, it the fault of the person.

It also tells us as a ham community that we should take the time to designate some trusted close friend to assist with the disposal of our equipment should we meet an untimely end.

Any other thoughts out there?

Lee Smith

Source record: 81506

>It's sure not an HRO 5! National never made a 2.5V filament tube set after 1939-1941. HRO 5 is post WW2.<

Both posts are inaccurate. A number of HRO-5 models were made well befor ethe end of the war, as my 1944 National manual for them attests. Further, the HRO-M is a 6v filament set, and its tubes are glass w/shields. The 2.5v set (typically using the same supply as the FB-7) is an early HRO, period (no suffix). There were also minor variants of these as well (by meter face or switch, coilset labels, etc.). I have one from the first few months of production. No, they all didn't have the fkn ivory switch, either<G>.

You will do well to remember that there was often little rhyme nor reason to what National made with what when, as they were parts hoarders who used or re-used whatever they had laying around to best advantage on any particular production run (which were small runs at that), just to confuse us a little more<G>.

But then, without mythological lies abounding, how would "collectors" have fun arguing the "facts"? :-)

Any 2.5v HRO is very early. Please let me know what your fetchs - mine is near-perfect, and I need a new truck<G>.

You sure show up the best in poddy mouths
You apparently frequent ebay that you do not like
By your own statements
Why not accept that the Ham community will make up its own mind without your police force.

Appears best to just add you to the kill file
So long

POOF!!!!!!!

Some people sure do hate Ebay. I don't mind it, however, I've never bought anything through them.

I didn't think about the untimely end situation. I have quite a collection of nice stuff, but due to the difficulty of selling such heavy equipment (even if it is Harris) I would probably want it to be donated to a college ham station of other worthy cause rather than to leave an extra problem to my heirs.

Hi All,
Does anyone know where I can view or pruchase a color photo of a National NC46? As I understand it, they were green/blue. The one that I have pruchased is Dark gray/light gray. I have tried all of the usual locations specializing in the National line, but cannot find any color photos of this one.
Any help will be greatly appreciated.
rgds,
Mark S.

For Sale NEW 7036 (6BE6) tubes.
The boxes have the following information on them:
5960-00-074-4833 ELECTRON TUBE
1 EACH DLA900-82-G-0017-005
A-3/83 GE-7036 GENERAL ELECTRIC CO. Tubes are 5 to a sleeve.
The 7036 is electrically the same as the 6BE6 but it physically
taller. It is the same height as a 6AQ5 so tubes shields will
not fit from a 6BE6.
$11.00 per sleeve plus $3.20 priorty mail shipping U.S. locations only.
1-4 sleeves $3.20 priority mail shipping
4-8 sleeves $6.20 priority mail shipping
Thanks Larry WA9VRH

Lee,

Very well said, and, by the way, I am enjoying the Eddystone you sold me right now. Did you make a profit, I don't care, I bought at a price that I liked and you liked. Buying and selling radios is sort of like when we were little and traded three rookies for a Mickey Mantle card or two Gerber knives for that very nice Case. Someone might have made a profit but odds are it balances out in the end.

>on a PC ?

Hello Rick:

I don't recall saying it was OK to link to everybody on the face of the earth for Ebay FA items at any time in my ham "career," so you must have me mixed up with somebody else in this thread. Since I have never even thought that, ...or given it 4 seconds consideration in the grand scheme of life, it is for sure that I never said it!

The NG would seem to be for BA issues, of which the sale and purchase of BA's is a large part of the hobby for some, and my post asked about selling BA's and the practices that arise therefrom. "Spam" is a pretty nebulous term...lots of the FS items are perhaps "Spam" in the opinion of those who visit here looking for advice on the restoration of older equipment. If you are lookinbg for help in fixing your SX-28 and all you see here is info on HT-37's you could consider that to be nothing but "spam." It is all in the eye of the beholder.

Some people are super-twisted-around-the-axle over FA posts, and that's certainly OK for them to hold that view...its a free world....most it of anyway. I could care less either way. I don't pay by the byte for downloads, and I don't suspect that many people do. If somebody's actions cause these folks to require a house call from the family doctor to administer blood pressure medication, followed by counselling services to control their anger, they do it to themselves.

My question related to the sometimes voiciferously expressed belief that anyone who sells an item for what is worth to the purchaser is somehow a ham radio maverick deserving of persecution and public pillory in the market square. I asked for BA members to consider the request and post their observations. So far, that has been sorely lacking, and this has once again turned into the same old "I hate Ebay...I love Ebay" discussion....some of you just can't wait to fire from the hip at the first moving target without consideration for the rules of engagement!

In answer to your question about stopping FA posts from coming to your QTH, yes, it can be done fairly easily.

Mark:
Wonderful to hear from you! Glad the reciever is meeting your expectations and has found a good place to reside. If it had performed remarkably better than my Racal 17, I think I would have kept that one for awhile longer. Yes, I "think" I made some profit on that one, ...or would like to convince myself I did, but it was tied in with a few other things I lost money on so who really knows....so the gambler analogy comes to the fore again.....they only talk about the times the ponies they bet on won! I took the funds from that radio and converted them into power supply for my KWM-2A restoration project and a few tubes. In other words, I let my bet ride.

The trading of things is always frought with variables. If you could have that Mickey Mantle card back now....just as I wish that I still had the Triumph TR-3 that I owned in 1968 and sold for $300.....you might be able to lock it in a vault and worship it nightly before going to sleep.

Now, to address the subsequent post that was added to yours:

The difference in this real world version of that story is, that an
adult, sensing that he can profit off your card hobby, swoops in at
one of your local card trading sessions, buys ALL of both of your
cards, takes them elsewhere, and sells them to other folks. He has
no interest in your cards, your well being or the hobby... he's just a
pimp
(snip)
So, if you were offered $20 for the card and the "Pimp" as you chose to call him, later sells it for 40, so what, ...the $20 you got for the card was more money than you ever saw before and you were happy to go off and buy $10 worth of Double Bubble chewing gum with it. If you later found out that the guy sold it for an extra $20, you might either lick your wounds ad cry yourself to sleep, learn a bit about the ways of the world, or start to buy cards yourself in the hope that you might also be able to make an extra $20 to buy more cards.

Funny thing is, somebody always knows more than somebody else...check out what happens in the futures market...or selling and buying used cars...the salesman is just a "pimp" there too, he could care less abut the sweat that went into the manufacture of the car by the production line staff or the pride the designer took in shaping the clay models before it went into production. How about real estate....the agent is just a pimp too....they could care less about how you raised a family there and have a lifetime of memories in the dwelling...they are just "pimps" too.

You'll see the same names selling lots of gear in here. I have no beef with people selling their own stuff... but these folks are making a business (hmmm..wonder how much in the way of taxes are being paid?) by sweeping through hamfests and estate sales, cleaning them out, and reselling. It has nothing to do with a hobby.

Once they have bought it, it is "their own stuff."

So, do you work for the tax department or did you put yourself through school by being a ratfink for the fuzz? The older local fellow I mentioned earlier that buys, repairs, and sells a few BA's in a year to supplement his pretty low pension should now be turned over to the cops?

Maybe a person who likes to fish and ties his own flies decides to sell a few to get a couple more rooster hackles to be able tie more flies for himself for the next season...so what, and what's the difference....or am I missing the point entirely?

I make sure to note their names, when and if they ever do need an item, part, or manual for their station, that I never send them that which they seek. They've made tons of money, and they can go buy what they're looking for.

Well done...it truly demonstrates that you will carry what may be a modified form of envy into an emotion near hatred...at the least some lesser form of revenge.

That said, there are some people that I have sold things to, thinking I was doing him a favor, only to see it listed again 5 days later for twice the price....I just don't bother selling to him on the basis that I am doing him some kind of favor in getting a cherrished old radio going to keep for the next 20 years he has on the planet and the degree of flexibility in my dealing with him becomes considerably less in the future....if there ever is a future.

Your definition of "tons of money" may be slightly out of whack. Like many of us, he may be winning on one deal by $50 and loosing 45 on the next thing he touches.

My point is that these radios are not anything but radios, some better than others, some worse.

Hello Lib:

Good post, but it presupposes that eveyone has the smarts to figure that out! Obviously, you learned "the ways of the world" rather than allowing yourself to be victimized.

When I was about 8 or 9, I used to enjoy a little gunpowder from firecrackers in "alternate packaging" too....a few frogs and toads paid the ultimate price for their obvious lack of respect. I started on my mastery of torture methods by burning up ants with a magnifying glass...may as well have been a fullscale thermoneuclear device as far as they were concerned. Since then, I have graduated to torturing people by using logical arguments on the Internet.....far more insideous!

Kind of fun though. I just got a TR-4 with the matching VFO/spkr/pwr. Hasn't been turned on in over 8 years. Figure the power supply will instantly vaporize. Rebuilding it will be my fall and winter project

Jim,
Does your receiver have the CW filter installed? If so, I am interested in buying it.

Thanks,

Bob ARS K2KXG

Congrats Bill!

I got back into older equipment about 7 or 8 years ago after a stint in solid state radios. The SS are fine, but I felt I was missing not right for me. When a friend bought a Swan 350 and needed some help with it, I realised that for me, the ritual of peaking the drive, dipping the plate, adjusting the transmatch, etc. was what I had been missing. The interaction with the radio is a dispicable chore to some and they can't wait to sell off their "old tube junk", ...for me it is beauty!

I suppose I wouldn't be using my 40 year old S-Line on Field Day if I was super-serious about contesting, nor would I be choosing my KWM-2 as the prime radio if I were a rabid DX'er that considers life incomplete if I didn't make the Honor Roll and I had 2 countries left to get, but for my wants and needs, they are perfect. I just enjoy getting on the air, meeting new people and having a conversation with them.

The other night, I heard 2 guys arguing about which one was off frequency...one said his digital readout said.....blah blah....and that the other guy sounded about 30 Hz high! My thoughts were, then why don't you just use the tuning knob and turn it til he sounds right?

Maybe I'm missing the boat going to the future of ham radio, but I enjoy cruising the backwaters far too much to covet anything else.

Regards to all BA'ers.
Lee Smith

1089. Selling BA's Policy Guidance...was Heathkit CHEEEP

Joe wrote in message <7ngn42kkj1@nntp9.atl.mindspring.net>...
>I agree this boatanchor pimping really sucks, gonna have to rename this NG
>EBay Pimps inc..

Joe and Others:

Interesting observation Joe, but I wonder if you could take the time and effort to tell me why you hold that point of view? Not that I wish to start the time weary "Ebay Sucks" type of post, but what is wrong with somebody buying something at a hamfest and selling later on, whether that is 22 years later, or 22 days later? If he can make some money to upgrade his station....or put food on the table for that matter, where's the problem?

I have struggled with trying to sort this out for a couple of years now since getting on the Internet and seeing some very disparaging comments made.

I don't recall taking any oath when I got my ticket 33 years ago whch indicated that ownership of radio equipment is a sacred trust, and that I would never sell anything for anything more than I paid for it. That said, I have sold a lot of radios and bought a lot of radios...some I have kept for over 30 years, some I decided after 3 weeks just weren't for me for dozens of different reasons. One of my prized receivers was given to me by my grandfather and has been in our family since new in the early 1920's. So, how do I dispose of them?

If a fellow that I don't know comes along, offers more than I paid for it, and I want a another BA that costs an extra $50 more than I paid for a radio that I have determined is unsuitable for my present interests, am I supposed to turn down the money I need to buy the other radio or what? Is that extra $50 supposed to come from my grocery money, or should maybe my wife pay for it by my not being able to buy her a new dress or take her out for supper?

From what I gather from some of the posts, unless you absolutely always sell a radio for less than you paid for it, preferably after putting about 50 hours of troubleshooting scrounging, searching and buying specialized parts, you are a scumsucking bastard exploiting your "fellow brethern of the ham fraternity." After all, it's just a wonderful time fixing these old radios and you should be proud to fix it for free for somebody else to sell later for fair market value.

When I have a radio that is of interest to a good friend, or a person that has helped me in the past in some way or another, an item has a certain potential value. For somebody I have never met, that has never given me so much as the time of day, the degree of my flexibility in pricing something is lessened.

In some cases, I know from talking to the guy that he will enjoy the equipment and is qualified to keep it in good operating condition. Maybe for that particular radio, finding it "a good home" is more important than what it's fair market value might be...or what I may be able to do in the way of swapping it for something else.

I just sold an RCA AR-88LF to a well known BA fellow that I know will really enjoy it and I was very glad to see him get a good example of a radio he had been looking for, I know that he will look after it and enjoy sitting in front of it remembering days gone by from when he had used one about 50 years ago ...I cleared about $60 on the transaction over what I had paid for the radio and had owned the RCA for about 5 years. That money has already been earmarked for some components for my Collins KWM-2A restoration project. Maybe in a few years I'll sell or swap that Collins radio, but right now I plan to keep it a long time because I've put a lot of effort into getting it where it is now.

I've given radios away to kids just getting going in SWL...just like a neat OT did with me when I was about13, conversely..... I've also paid too much for radios which I later felt to be junk and sold 'em at a big loss just to get them off the workbench after I've found the coils wouldn't peak because some gorilla had twisted the slugs til they were stripped, and who knows how many other stories...just like lots of us.

There are times when I will tie up considerable personal time, effort, and money that should go to family items in radios or components for the "good of the hobby" as I did about a year ago when I bought some solid state rectifiers that replaced the 866A's, 3B28's, etc. When all was said and done, I sold them to BA folks, and made about $2 per rectifier....whooppeee! Pretty heady profit margin in that......maybe I should make this my full-time job with money like that to be made out there. All but one person that bought them was happy to do so, and glad I had gone out of my way to ensure these components when to help out folks.

Forgive me, but on some radios I make a few dollars, on some I lose a few dollars...probably in the end, I break even...if I'm lucky....a person with a gambling habit probably tells himself the same thing.

These radios are unemotional hardware commodities, and generally I treat them as such. Whether we are talking fishing reels, model ships, 45 RPM collectors records, artwork, or carb parts for a 57 Chevy, they are all the same to me except for the ones I keep for many years and develop an attachment to. I'm not selling my children, or faithful sheepdogs.

When all is said and done, I've now got some great equipment and I'm proud to be the present owner. I got that collection because I have put a lot of time, money and effort into getting the radios over the last 30 plus years of enjoying radio, and the people associated with it. People have helped me, and I've always remembered them and helped them in someway when possible.

It is my feeling that the radios we have are not religious symbols to be traded among "fellow Monks" who have sworn to unhold the concept of "Forever

preventing the cost of equipment from rising above what the cheapest guy in the BA Order thinks it's worth or is willing to pay."

I truly welcome hearing from people on the topic. If I'm scewed up in your opinion, take a moment to elaborate as to why. It may help to set a baseline for conduct of others who read the Newsgroup that are just as confused as I am when we see some of the posts here. Who knows, you might actually make a difference!

Regards,
Lee Smith

The general-coverage set is an HQ-180. It has calibrated bandspread for the
ham bands. Otherwise very similar. -- C. Veres

Lee, this is why I think Ebay SUCKS.

The people who post on ebay have no consideration for the news group
that they are spamming. I come to this NG to buy stuff from other
people, on a 1 on 1 basis. It pisses me off when I see something with
For Sale in the header, I download the message and what do I find??
Some as*hole says "see my battery powered dildoo on ebay. the stupid
as*hole had NO concern about deceiveing me with his for sale header..
this has nothing to do with a ham making a buck buying and selling
BAs, it is about people who LIE and DECEIVE people to get them to
read their disguised ebay adds in the NG...
If you want to sell on ebay, Fine.. The people in the NGs do NOT
want to be bothered, with the ignorant post's about ebay...
If these people do not have the decency to put FA= For Auction in
their add, they deserve all the crap that myself and every other
participant subjects them to. To sum up everything.
EBAY SUCKS, DIE EBAY, DIE....

Just my opinion

Bob

I read these NG to buy stuff I couldn't buy as a kid and do not wish to play
the EBay game to do it. I see nothing wrong with a guy spending 20 hrs
stabilizing a VFO on a HW-101 and making some money. BUT I see these pimps
splitting up power supplies, speakers, XCVRS to make a greedy buck,
avoiding a 1 on 1 transaction (most likely to pass of junk).
flooding the NG's with each divided component spamming.
Most claim to not know anything about the rigs and do not care to.
To say this B.S is OK is lawyer talk. (just because its legal doesn't make
it right)
F**k EBay

Who made Joe the Police man for "Others"
He sure does not speak for me..
I have been trading/selling gear for 45 years at auctions(Hamfest days) online and person to person.
If there are those who do not like online auctions thats what kill files are for.
By the way is not "Pimping" the act of representing someone else like "Others"

Frank

1099. Re: BA Selling Ethics/Morals Question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-26 00:00:00 UTC
From: Joe <joeamp@mindspring.com>
Message-ID: <7nhn04$5rs$1@nntp3.atl.mindspring.net>
Source record: 81576

I read these NG to buy stuff I couldn't buy as a kid and do not wish to play
the EBay game to do it. I see nothing wrong with a guy spending 20 hrs
stabilizing a VFO on a HW-101 and making some money. BUT I see these pimps
splitting up power supplies, speakers, XCVRS to make a greedy buck,
avoiding a 1 on 1 transaction (most likely to pass of junk).
flooding the NG's with each divided component spamming.
Most claim to not know anything about the rigs and do not care to.
To say this B.S is OK is lawyer talk. (just because its legal doesn't make
it right)
F**k EBay

talking about. Not really unethical, but they should go ahead and say they
are used-radio dealers.
>
>--
>C. Veres

Hi Chip:

Thanks for the reply and contributing to the discussion. I am puzzled though, even if they are "dealers," what difference does it make to whether you buy the radio or not? Perhaps I am without any character, but I could care less.

A good friend of mine despises "Dealers" and is constantly moaning about how they are screwing up the ham radio market for older equipment but can't tell me what one is.....should it be defined like a person who buys, trades and sells a lot of cars out of his backyard....maybe selling more than 3 BA's per year or something? If I want the equipment and its in good shape, and the price is right should I care?

There is a retired fellow in this area that restores BA's and sells them to suppliment his pension...maybe sells ten a year, whats wrong with that ...if anything? I think he's doing a valuable service.

About the only practise that I get twisted over is somebody going to a newly widdowed ham's wife and lowballing her to "help her get rid of this old junk and save her from having to take it to the dump, saying ....after all..... Joe, Bill, Bob, Bubba or whoever would have wanted it that way" and then flogging it for about twenty times the price.

73 de
Lee

Bob....more drivel posted and bandwidth wasted with the sole intent being to piss you off, enjoy your day! I even used an extra comma or two especially with you in mind.

Hi Folks,
Recently aquired a Globe King 500B in nice condition. The modulator plastic meter cover is cloudy; Not just the surface, but general clarity is low. I have tried using plastic polish, ("Novus" makes a great surface scratch remover), and all surface scratches are essentially gone. Slight improvement in clarity, but not much. The gentleman I bought the transmitter from mentioned a "gel" that could improve the cloudy look from plastic meters. Anyone know of a product?
Thanks,
Jeff James

R392= $200
+
UPS ground shipping for 70 LBS or so from NJ 07747 if absolutely necessary

WOULD PREFER LOCAL PICKUP VERY MUCH to SHIPPING as UPS does mishandle and
break stuff.

RX is in MINT condition , original METER everything
with excellent sensitivity and all original tubes ,
it has been carefully realigned,

if you need more information about R392, please look at
http://www.connix.com/~provero/r392/r392.html (not related)

I also have ANOTHER R392 which is 7/10 , with a nonoriginal meter and knobs,
3 bands not working due to 2 missing slugs in RF deck
:- $120

ALSO, the following items are for sale:-

COLLINS R390a : VERY GOOD CONDITION, very very sensitive and selective , has
4 mechanical filters , original meters $400
COLLINS R390 : Excellent condition very very sensitive and selective ,
original meters, new tubes and barreter 3Tf7 $400

HALLICRAFTERS S40b - very good condition $75 (recapped)
Hallicrafters S38B : Excellent condition : $50

Need to sell due to moving, would prefer local pickup in NJ.

Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

I have several Collins 208U-3 3 KW 2-30Mhz RF Amplifiers. These are in good condition as removed from service.

This is a military/commercial quality amplifier that uses a single 4CX3000A to produce 3 KW PEP or 3 KW average power with only 0.2 watts of input.

These are automatically tuned with a servo system that takes about 10 seconds to tuneup.

The primary power input is 200-250VAC, 3Ph, 47-60Hz.

The net weight is 975Lbs, size: 32" x 23" x 70" Tall.

If you have 3Ph power and the room one of these superb Amplifiers would make a great addition to your station.

I am offering these unpacked FOB Somis, CA as follows:

untested less the 4CX3000A Tube $2,750.00 unpacked.

I have a few tested and Guaranteed 4CX3000A tubes at $750.00

crating by a professional packer is $300.00 additional.

A complete service manual is included at no charge.

If you need more info please contact me.

I have the W7FG 100V manual and can't read a resistor value in an area where I have a bug. If someone would be so kind as to look at their diagram and tell me what the value of R431 is, I'd be very grateful. You can find this resistor at the top of the diagram, just above and to the left of V14, the 6BQ5 RF driver tube. Also, can you tell me where the left end of the resistor is supposed to go? There are some w-Bk wires in the area, but I can't see what joins what. Many thanks for any assistance.

On Mon, 26 Jul 1999 12:55:38 -0500, the estimable "Lee Smith"
<ckvnfm@mb.sympatico.ca> postulated:

>That is not the fault of the medium, it the fault of the person.
>
>It also tells us as a ham community that we should take the time to
>designate some trusted close friend to assist with the disposal of our
>equipment should we meet an untimely end.
>
>Any other thoughts out there?

I would hope that those hams that have a shack full of valuable
goodies would have sense enough to arrange for their local amateur
radio club to handle the disposition of the shack; perhaps offering a
commision of the total sales to go to the club, thereby providing some
incentive to maximize the sales price for the benfit of the widow(er).

Actually it seems to me that selling off a shack via ebay might be in
the best interests of the widow(er) since we all know that things on
ebay often sell for multiples of theit "true" value!

Eric - the handles are easy to find, try Fair Radio first, but I see them at hamfests all the time - if it works, don't fix it. If the caps test bad, replace them. (If he hasn't fired it up yet, of course, bring it up slowly on a Variac) Volume 1, Issue 1 of the Collins Collector's Magazine (7/91) probably answers all your questions, but is a bit dated. (I can make a copy if need be). Dallas Lankford was at that time one of the foremost experts on J4's (don't know if he's still around). You can expect to pay 100 bux a pop for the filters unless you get lucky, and they aren't all that easy to find. Hope that helps. Scott

1143. Help...Rohn Stratotower

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-27 00:00:00 UTC
From: Richard Spingarn <richard@eagleprint.com>
Message-ID: <379e5fdf.0@news2.lightlink.com>
Source record: 81470

Hello,

I have a dismantled Rohn free-standing tower with "Stratotower" printed on the orange Rohn label stuck on one of the legs. The tower measures 23" from leg to leg at the base. This is a 40 footer (5, 8-foot sections) which I am now reconditioning. It is in pretty good shape.

I have called both Rohn and Texas Towers and cannot get any information about this model, except that it is discontinued. Rohn was especially rude and unwilling to answer *any* questions. I think they were afraid of liability issues. I need to build a base section and get specs for the size of the hole, etc.

Has anyone heard of this tower and if so how I can find out more?

Thanks.

Rich Spingarn, AA2UP

The problem with eBay for me as a Boatanchor buyer, is simple. eBay causes inflation. Where before, a seller was limited to buyers in a certain area, on a certain date mostly (i.e. at a hamfest), now he can offer his stuff to a very very large audienceSomeone in that audience will have enough disposable income, and want the radio badly enough, to offer what most of us would think of as a ridiculous amount of money. This process repeats, until sellers come to expect higher prices becuase higher prices have been paid in the past for what they are offering. And so on. So soon, many of us get priced out of the market.

Auctions, from eBay to Sotheby's, have always been something of a peep-show. Auctioneering is pornographic, all about lust and visuals. eBay just brings this to the masses. The good news is that despite this, sense and real market value seems to be moderating prices. A couple years ago, BA's, including the Drakes that interest me, were few among the listings. Now, it is usual to see 50 Drakes at any given moment up there. A seller can make claims about rarity and consition all they like, but the preponserance of evidence speaks otherwise. Among all the hype, TR-4s seldom go for more than 250 bucks, and that isn't all that much more han at hamfests. Plus, you don't have to wait months for a hamfest!

The difference in this real world version of that story is, that an adult, sensing that he can profit off your card hobby, swoops in at one of your local card trading sessions, buys ALL of both of your cards, takes them elsewhere, and sells them to other folks. He has no interest in your cards, your well being or the hobby... he's just a pimp

You dont get market price for the cards, the end customer pays far more for the item, and he goes off to find some other unaware kids to profit from.

You'll see the same names selling lots of gear in here. I have no beef with people selling their own stuff... but these folks are making a business (hmmm..wonder how much in the way of taxes are being paid?) by sweeping through hamfests and estate sales, cleaning them out, and reselling. It has nothing to do with a hobby.

I make sure to note their names, when and if they ever do need an item, part, or manual for their station, that I never send them that which they seek. They've made tons of money, and they can go buy what they're looking for.

PS: And they could at least buy a dictionary and learn now to spell "CHEAP"......

But then again, when we were kids, we were smart enough to put our cards & good marbles away when we saw the guy in the trenchcoat coming, and maybe even pull out a few little homemade bombs (does anyone even dare mention such things today<G>?). We took care of our own...what a novel idea...hmm...

>I asked for BA members to consider the request and post their observations.<

Most "observations" of such nature appear to fall into some category of exclusivity, under whatever guise, on either side; even up to envisioning USENET newsgroup posters as being "members" of something (not). The only members that may exist on USENET might be those in the hands of some *submitters* whilst online, yes?
:-)

USENET seems to attract its share of cunning linguists seeking publishing media - what happened to plain ol' "grab da radio and tweak it", or "how much RF can you squeeze out of a Mullard KT-88 wired as a triode B4 the water in the coffee can around it boils away"? Such things do more to send the dealers & auction-pointers packing for glass audio territory than any artfully-written bitch or "opinion" threads<G>.

By any reasonable modern technical standard, all of our sh*t is only junk, and we're supposed to be having fun with it, boyz & gulrz...if this NG were a place where almost no one was willing to pay any serious money for 40-yr-old technology that wouild win few industrial design awards even when it was new, methinks the annoyances of commercialism would dry up in short order, and no one would be slogging through hot barns & bat sh*t trying to make a killing off Widow Jones. Nor, for that matter, preoccupied with where their clunky gear goes after they do, as if it had a life of its own.

It is also possible to ammend a USENET charter to rule out FA posts, and to even configure & operate a spambot to delete them - but these are actions which require work.

Source record: 81535

Jim,

I still am interested. Here is why. I presently have the same radios in excellent condition and they work great. But my receiver does not have the CW filter. The tuneable audio filter works great but I would like to have the CW filter.

My plan is to find a set of 600 twins that has a receiver with the CW filter, buy them than sell my twins (sans) CW filter to some one who only does SSB.

Checking for the CW filter is easy. Tune in a SSB signal then switch to CW. If the filter is in the radio, the SSB signal should become difficult to copy (narrow bandwidth). If there is no change, then the CW filter has been jumpered out with a resistor (standard factory mod).

Please check and let me know. Thanks.

From: dunnr@ix.NETcom.COM
Message-ID: <000701bed930$bf624a60$6443c681@dunnlaptop>
Source record: 81396

Hi All,

First I would like to say thank you to all who provided me with insight into the R-174 that I acquired this weekend. Special thanks to Tom Norris who sent me a scanned schematic of the radio and power supply. I have traced out the hombrew supply and it parallels the original in function if not in design (uses a sand-state power transistor as a series pass filiment voltage regulator).

Secondly I have what appears to be an even tougher question. Along with the R-174 I picked up one each USM-116A and USM-116B VTVM's with RF probes and one had the basic docs with it so I have a schematic, etc. Hopefully these will work as well as a a HP-410B/C for boatanchor work. I also acquired an AN/URM-90 Impedence Bridge (along with a mine detector, radiac meter, vacuum pump, etc). I looks like a great bridge and appears to be healthy but I don't have any documentation for it. A search of the net only results in a couple of hits and only one manual site, W7FG. W7FG's web site is down so I have no source of a manual. Does anybody have any information/experience with the URM-90 and/or know how I can get a manual?

As always, thank you in advance for your help.

Rob Dunn

From: Gord Skiffington <skiffing@nbnet.nb.ca>
Message-ID: <379FA73D.F49@nbnet.nb.ca>
Source record: 81400

I've gone through the following process to restore (completely) badly scratched and even melted corner plastic meter faces. First you have to keep in mind that this will reduce the thickness and that the meter face must not be cracked through. I'll start with wet sanding the plastic face (yep!) with 400/600 grit - WET SAND ONLY and keep flushing the work and paper until the surface is even and smooth in the affected area or totally. When this is done carefully, you will not be able to discern any large scratches or mishapen areas and the surface will be very smooth even if not clear. Now take a good chrome polish LIKE Autosol (commonly available....I see LBRTY4 uses Simichrome which is similar) and apply it WITH water rubbing out with a very soft cloth....clean often and reapply always using water to form a paste (to make the surface very smooth). The 4 that I've done came out looking like new - only 1 had a slight distortion when viewed at an angle due to the large amount of face material I had to remove in that situation (The meter face had been melted on one corner badly). There may be other/better ways...this is one ham's solution :)

Will:

Thank-you for taking the time to put some depth of consideration into your post. I appreciate you explaning it so well. It is just the type of "mind-stretching excersize" I had hoped to see from the readers of the NG.

As you observe, the feeding-fest seems to have peaked out a little for some rigs and things should seek their own level before long. That means there may be some people that are unfortunately "priced out" of some lines of BA's, but I guess it always was that way to a certain extent. You can look at it as being lucky for you that you "bought property" before house prices went nuts!

1174. Re: Estate Planning

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-28 00:00:00 UTC
From: Crazy George <munsch@ibm.net>
Message-ID: <379f8ac7@news1.us.ibm.net>
Source record: 81406

We recently lost a local ham who bought, sold and traded an awful lot of gear. Several of us made a pact a long time ago, and made our families aware of it, to share the responsibility of maximizing the return to the survivor on the estate holdings of radios and test equipment. Knowing the value is one thing, but inflated estimates can play hob with estate taxes, so be very careful in that area. So, there is a lot of work immediately ahead for us to sort out and sell the silent key's estate.

The ground path on the vary cap is weak.
Try cleaning the contacts by the bushings do not get spray on ANYTHING else.
Or
Solder a piece of thick solderwick from the vary cap shaft to ground

Then too, I've seen several cases where the trusted member hoping to 'help the widow out', placed unrealistically high prices on the estate items. This process typically backfires, leaving the widow with most of the goods and an unhappy ham community. Indeed, this practice seems so prevalent that I rarely attend estate sales.

>
>K8AC
>Floyd Sense in Angier, NC
>
Floyd,

My schematic shows R431 as 1K. The left side of R431 connects to C447, R438 (100K) and R424 (1M) among others. There are a few W-BK wires on the top of the schematic. The top W-BK goes from R448 (left side) to 12F of the band switch. The two W-BK wires below R431 both goto the Mismatch indicator NE51 & 100K (left side) and to the Screen over current relay in the RF cage. This was the same relay that had to be replaced in my 200V.

Hope that helps. I've spent many and hour in just that same spot on my 200V and know it well.

Disposal of vintage radio gear when owner goes SK is an issue down here, too.

I noted one comment that it good idea to arrange for one's radio club to take care of the matter.

Presumably US radio clubs full of BA/glowbug afficionados. Not that way here!

Some time back a noted eccentric and collector well South of here with literally a house full of BA/GB gear (mainly WWII militaria) went SK. As arranged, his local ham radio club helped the family by taking the lot to the dump....

The Auckland Branch of NZART was left an entire run of QST from No1 by a noted amateur against my advice to him. The collection was duly shelved. While I was away overseas the club committee in its wisdom sent all but the most recent to the dump because "no one was reading them"...

I would suggest making arrangements for trusted individuals rather than a club to act as executors. Better still, if fading a bit, gift or sell cheap to suitable individuals / organisations before popping one's cork. That way you get to see the faces light up.

Barry,

Good advice all around. I would add one more thing, though.

It's a good idea for all of us to have an inventory of our radio stuff (BA or not) with an honest estimate of its worth. Most nonhams have no idea what ham gear is worth. People who look at the depreciation rate of items like cars and computers might figure that a ten-year-old transceiver or amplifier that originally cost a few thousand would have depreciated in value to only a few hundred, if anything.

Having one trusted individual (preferably a family member) who knows what the stuff is, and what it's worth, is always a good idea, too. But don't put all the eggs in that basket.

Okay Boatanchor fans, I seem to have run into a brick wall on this one. I need a 6-8B ballast tube for my RBC-4 boatanchor. I can't seem to find anyone who has one for sale. Anybody here got any ideas as to where I might find one?

Thanks,

Allen Cutts

I need the following tubes NEW or USED:
1 @ 4CX250B
And I need either of the following:
6 @ 6LF6
6 @ 6LR6
6 @ 6KD6

If tubes are used they must be in good working order and have good GAIN
or MU.

>either. Lists are lists and newsgroups are newsgroups.

That's not correct. This is a newsgroup which is reflected onto an email list. One can read and post to this NG via an email list server. Those subscribed to it receive all the day's NG articles in a single email.

To subscribe, send an email to: listserv@ucsd.edu and only write:
subscribe ham-boatanchors
and you'll be hooked up. Make sure you save the Welcome message; it contains the unsub instructions.

1219. Loosen those pesky Kenwood Microphone Nuts!!!

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-29 00:00:00 UTC
From: DontDoIt@ImNotHere.com
Message-ID: <37a080f6.22404938@news.mv.com>
Source record: 81428
Cross-posted to:
rec.radio.swap,rec.radio.amateur.dx,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

(This is provided as a public service, and NOT as a way to make money...)

I have in my posession a tool that is positively brilliant at loosening/removing/tightening those annoying circular "nuts" that you'll find on various Kenwood rigs. Yes, you know the ones I mean, the ones that no amount of coaxing with the tip of a screwdriver will budge.

Why on earth would you want to remove this nut, you ask? Well for most of the affected Kenwood rigs, it's the ONLY way to get to things like digital front panels, lithium batteries, and so on.

You can see a photo of the tool at:

http://www.mv.com/ipusers/innermedia/kenwood/spanner.jpg

So here's the deal:

1. Send me a postal money order (no cash or checks please) for the amount of $37.50. This covers the cost of my packaging and shipping the tool ($17.50), plus a refundable deposit of $20.

2. I then ship the tool to you via UPS ground. If you want it faster, email or call me and I'll tell you the cost.

3. You use the tool (totally at YOUR risk!!!) to open your radio, do your work, then use the tool to close it up. PLEASE DON'T BREAK OR ABUSE THE TOOL!

4. Using the same box I sent it to you in, you send the tool back to me, via whatever method you choose.

5. When I receive the tool back undamaged, I send you a check for $20, thereby refunding your deposit.

Your net cost is therefore just $17.50. That's about 1/4 of what any Kenwood service facility will charge you, and you get to control what happens.

PLEASE DON'T USE THIS AS AN OPPORTUNITY TO BUY THIS TOOL. I can tell you where to get your own, please return mine.

If you want further info about any of this, just contact me as shown below.

Thanks, and best regards all!

Neil Rosenberg
60 Plain Road
Hollis, NH 03049
(603) 465-2788
NeilR@innermedia.com

Disclaimer:

I make absolutely NO warranty as to the applicability, performance, or safety involved in using the tool I send to you. If you damage your rig, or yourself, that is totally your responsibility. If you void your warranty, that's also your problem. THINK BEFORE YOU ACT!

If the tool is not as I described it, if you chicken out, or if it doesn't fit your rig, contact me, and I'll refund your entire price (less my UPS cost) as soon as the tool is returned to me undamaged. In other words, treat me fairly, and I'll return the same.

Thanks for clarifying my too-narrow definition, Jeff. :-) We often do forget that many USENET NG's are still available from a listserver in digest form, which indeed qualifies them to some as "lists." And it's nice to be reminded that this listserver is still up.

Inappropriate - we don't have double jeapordy in America, and even ex-felons deserve the benefit of the doubt to have changed their ways - at least, until/unless they hose up again. IMHO this kind of thing is becoming all too popular online - a sort of democratic mob lynching. Reminds one of the gag about the kind and giving philathropist who helped thousands, but just once kissed one pee-pee - and what everyone called him for the rest of his life: a co#*su@ker.

I have several brand new CentraLab model JV9000 ceramic switches for sale. These are 2-17 positions single wafer rated at 9kv. Will handle legal limit with ease. Great for high power amp projects. These were the swithces used in the old Dentron MT2000 and 3000 2KW tuners and also in the old Swan ST-1. Also have the little info pamphlet. They are built very well. ETO used a version of these in their Alpha 76/78 amps.

Price is $25.00 shipped and insured anywhere in the continental US. Two for $45.00 shipped.

This sounds to me like the true spirit of Ham Radio. Please, treat this man fairly. There are not enough like him to go around and Lord knows the human race could use more of him.

There is still some confusion. The article is incorrect and even in the case where the high bid meets the reserve, once its withdrawn the reserve would no longer be met.

Just my .02.

Bill

HI Spencer here is the wiring for 115vac. The plug wiring is what determines if it is 115ac or 230ac. Also it is a 9 pin plug not 8 pin I know whats a pin or two among friends..

pins 6 & 7 jumper
a/c line black to pin 2
a/c line white to pin 1 with a jumper to pin 8
a/c ground to pin 9

Hope that helps 73's Larry WA9VRH

Source record: 81301

Howdy Malcolm.....sounds like you've got a good old radio there.....probably hard to view the dial mechanism as you tune across so I'll make a couple of assumptions about typical probs.....Sliderule dial most likely.....look for the pointer to be hanging up maybe or hitting something as it slides across the scale......another one would be to see if you haven't got the dial cord crossed on the drum....sometimes this will make a lil jump (sometimes this will cause the thing to bind up). Another one would be to check the "driving" drum or small spool that is attached directly to the tuning knob (not all corded tuning schemes use this but a lot do)....misalignment (slight bend to the big drum) can cause the cord to spool off such that it climbs the side of either drum and snap back. Best overall hint to fix would be to remove the entire receiver and tuning scale if possible (!!) and observe it carefully as ya tune across...sometimes its the ONLY way. Best of luck by gosh....Keep on Tinkering!!

Hello!

Please check your junk boxes! Looking for the hookup cable for a Tempo One and the VF-1 Remote VFO. Uses a seven pin (not din) plug that is identical to the bottom of a 7 pin miniature tube (i.e, 6GH8).

Have been unable to locate any of the plugs so I'm hoping someone has a better junk box than mine.

Thanks for reading this post

Trade Motorola Expo HT, in as-is condition, for a 10m crystal cut for
the low end of the band. Will be plugged into an old CB rig modified
for CW work.

Jeff KH6O

1252. WTB: 4000 pf vacuum variable cap

N6YD/Peter

1254. Wanted: panel meter for Hallicrafters SR-160

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-07-30 00:00:00 UTC
From: mustang_maniac@centuryinter.net
Message-ID: <JX5o3.4294$gr5.556900@feed.centuryinter.net>
Source record: 81346
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I am in need of a working panel meter for a Hallicrafters
SR-160 transceiver that I'm fixing up. The meter from an
SR-150 may also work. Cosmetic condition not important,
as long as the movement is good (my meter is really nice
looking, but the movement is dead).

73,
Dean / K5DH

1255. Johnson Viking Matchstick control box schematic?

Yes, it is appropriate since I do most of my buying and selling in the
radio section. I don't want to get stuck bidding against these clowns
when all they are doing is driving the price up. And if I were to sell
something to one, I would like to know if he has a history of being a
deadbeat. This is all probably moot anyway since if they have been
caught by eBay, they probably have been suspended...

- David -

Original post by 'Joe':
There were three guys (radio auctions) caught doing
deadbeat & shill bidding on each other's stuff to drive
the prices up to ridiculous levels. It was discovered
and reported to EBay, the guys were expelled from the
various collecting societies they were in, etc. But all
the culprits got was a suspension from Ebay for a few
days and a warning not to do it again!

Bob: DON'T remove the smell! Doing so will DECREASE the value of your boatanchor radio. True BA enthusiasts LIKE that smell. As a matter of fact, your posting has casued me to consider a new business opportunity. I'm thinking about putting that old musty radio smell in an aerosol can and selling it in QST and Electric Radio! Now that I think about it, I could offer an entire line of radio aromas: There's that ever popular "Old radio magazine" smell and the closely related "Old box of QSL card" smell. Also the "Old Radio Club" smell (sort of like a combination of the previous two with decades of cigar and cigarette smoke thrown in). Then there would be the incense line, starting with the beloved aroma of melting solder. Then there would be our line of radio colognes...

Sorry Walt, but it's a custom hand-machined part, welded and hardened. At $50 an hour, which is what a juniour machinist charges, you'll be lucky to make one for a couple of hundred dollars.

At that rate, you should just buy one from Kenwood (yes they sell them) for $80.

Honestly, this is not how I make a living. If that were the case, I'd have to live in a cardboard box.

Lighten up please. It's just a hobby.

Neil

I have a Henry Tempo One HF transciever with matching speaker/AC
supply, DC supply and original manual. Rig is in good condition with
minor scratches and has full output on 80 thru 15 meters. Output is
slightly reduced on 10 meters. DC supply is missing cable and is sold
as is. You can see the rig at:
http://www.qsl.net/w6fm
The price is $200 for the package. I will not sell the DC-1 supply
separately unless the Tempo One and AC1 sells first.

73,
Ron W6FM

There was another story, about a week ago -- I believe I saw it on
MSNBC News, about an Ebay scam.

It involved a low-high bidding scheme.

A bidder puts a very low bid on an item.

Another bidder puts in an artificially high bid.

Nobody else bids, because of the high bid.

Just before the auction expires, the high bidder removes his bid.

The item sells at the very low bid.

The seller gets screwed.

Hi

I have recently repaired a Grunding Concert Boy portable. I am new to the hobby.

I had to undo the dial string to service the tuner.

I thought I put it back the same way.

It works however, there the string makes a popping sound as a tune accoss the dial. You can feel a slight jerk on the tuning knob as it pops. It pops approximately every quarter turn of the tuning knob.

An advice would be appreciated.

Many thanks

Mac

Bill, The proper designation for an item on ebay is FA, not to be
confused with FS.. as the subject line did mention the item was
on ebay, It obveiously was not your intention to mislead anybody.
in the future could you please use FA when posting auction links.

TIA

Bob

Hello all,

Cleaning out my file cabinet of duplicates and manuals for rigs I
don't have anymore.

All are copies, but are in excellent condition. Not dog-eared, and
are crisp and white pages. All are complete cover to cover and are
3 hole punched in blue plastic-face binders (EXCEPT the Hallicrafters
Heath, and Gonset manuals which are just stapled).

Prices INCLUDE postage to any US Mailing address via US Mail.

1. T4XB (Transmitter) / T4 (Reciter) - $13 (Both units in one manual)
2. R4B Receiver - $13
3. TR3 Transceiver $13
4. TR4C Transceiver $13
5. MN-4 Tuner $8

Non-Drake:

1. Heathkit SB-614 Monitor Scope $13
2. Gonset GSB-100 Transmitter $13
3. Hallicrafters S-85 Receiver $8
4. Hallicrafters SX-110 Receiver $8

If interested, please drop me a note. Cash, check or MO all ok.

Thanks,

Dave WB7AWK

I think somebody is mixed up here. With the proxy system of bidding on ebay the low bid should only be increased by what ever is the next bid increment no matter what amount the high bidder bids. Lets say the low bidder bid $10, the bid increment is .50 so the next bid would be $10.50. Now the high bidder comes in and places a bid of $100, the current bid of $10 is upped to $10.50, not $100, so nobody else even knows that the high bidder has placed a max bid of $100.

This made me laugh. Back at my first ham auction or so, circa 1972, I bought some QSTs, including some from 1947. The 1947 ones had a horrible smell, I thought it was a musty smell at the time, but thinking back I have a recollection of mothballs. I could not read them without my nose being irritated, so I put them away, separately from the rest of my magazine collection. I'm surprised I didn't throw them out, but having some 1947 QSTs was something I wanted.

At long intervals, I'd check them to see if anything had changed, and nothing. Years later, however, they'd lost the smell and they are just like any other magazine I have.

Not fair JJ, this is the internet. There are rules against using facts and logic in these threads. Pretty soon more will follow and useful information will creep to the surface. Maybe after that, if we don't stop it now, there will be useful information on the net, and it might even overflow to the media.

Naw, even facts and logic aren't that strong.

Good Idea. I think the cost is a little high but its still a good idea!
You might want to redesign it for different size nut washers. It looks
like it would be handy for working on copy machines too.
I wouldn't pay any attention to some of these guys. I don't think that
they would even know what to do with your good idea. Most of these
clowns are appliance operators and theives.

The article explains how they were doing it. A shill bidder bids the item up almost to the max of the high bidder, then just before the auction closes, the high bids are retracted leaving the accomplice with the low bid getting the item.

I just received this gear from an estate. If interested the prices do NOT include shipping. I can, however, deliver to the Peotone, IL hamfest next weekend.

Drake R4-C Receiver, 1.5 filter, works fine, condition 7.5
$200

Drake TR4-C Transceiver, Heavy corosion. Complete with knobs, tubes, etc. Front panel very poor. Untested.
$75

Drake T4X-B Transmitter. Corosion. I think restorable. Complete with knobs. tubes, etc. Untested.
$75

Drake AC-4 Power Supply. Looks fine. Untested.
$50

Drake L4-B Amplifier with power supply. Looks to be about a 7.5 Untested inasmuch as I do not have 220V access.
$575

Drake L4-B Amplifier with power supply. No tubes. about a 6.0 but restorable. At least very nice for parts.
$375

Time to make time and room for some new (old) toys: Will consider offers or trades involving National NC-44 or 45, SW-3 RME 69 or other pre war rcvrs.

All items are plus shipping:

HQ-120x Very nice condition. Front panel and dials are white and look just about new. Recapped, and all out of tolerance resistors changed last fall, Minor corrosion on side handles. S meter is sluggish and osc. pulls on strong signals. $175. Includes manual reprint.

Globe Scout 65B. Very nice condition cosmetically. Includes original manual for 65A. Plugged it in after getting it and no oscillation $140

Lettine Model 240. Recently redone and on the air. Good cosmetic condition Includes 80-10 PA coils and 40 meter Osc. coil. Also in nice shape. $180. Includes "manual reprint", and part of original manual.

National 173 w/ matching speaker. Working. Rcvr fair to good cosmetic condition, with some scratches. Speaker has large square hole on side and scuffing Some lettering missing on tuning dials, but have spare ones that I will include. Includes manual reprint. $200.

Hallicrafters S 119 Skybuddy II. Almost NIB. Very clean and shiny. Works. Includes manual reprint. $75

Heath HW-99 Not a true BA but will sell to make room for more BA's. 50 watt 80, 40 15 and 10 mtr CW xmtr with built in power supply. Just used it on vacation. $165.

Heath HD-10 Keyer. Includes manual $40

Original Viking II and 122 VFO manuals $35 for both, shipped priority.

Pictures of most items can be seen at web site.

From: Bob <bmiller@calweb.com>
Message-ID: <37a33a83@calwebnnrp>
Source record: 81246

For Sale: Collins 490T automatic antenna tuner, 2-30 Mhz, with Collins 200 watt 28VDC to 115VAC solid state inverter. Makes for plug and play automatic antenna tuner with nearly any radio. With some documents. Tuner good for 630 watts (mil rating at high elevations). Internal motorized inductors are gold plated, vacuum variable tuning. Loads random length wire from 30 feet on up. External control required is a reset switch. Everything else is calculated by the tuner based on input RF signal's frequency and the reactance of the load. I do not have the connector for the unit, but the diagram spells out power and control functions. Unit will run directly with Collins 618T(X) series radios w/o any modifications. I ran this unit with a Yaesu FT747 and it worked fine, but I cannot guarantee it beyond the data in this posting.

Tuner and Inverter $350 plus ups on about 35 lbs from zip 95827

tnx for the read es 73

Gentlemen.

It's time for some good swops.

I have many tubes from the 1920-30's, and some WEHRMACHT ,
many power triodes , radar, traveling wave,micro wave , klystrons,
magnetrons etc.etc.

Most are New In Box.

I also have many 1920-30's radios to trade with.
Some 1940-50's recievers - Hammerlund,RCA etc.

Please , let me hear what you need.
I am interested in big power triodes. > 20Watt's of plate dissipation.

- Sincerely Kurt Steffensen

Look for mechanical things. You are not doing anything remotely electrical when just touching the table. Look for cold solder joints, poor or missing grounds, and badly mounted capacitors. It ain't fun, but it's sort of the only way!

American "business" at its inventive best! However, for those unable/unwilling to afford the "tool", simply grind down a pair of good quality 6" long-nose pliers, just a bit. It works first time, every time and it won't ruin the pliers for normal work!. Especially, if you're in a hurry!

Neil wrote:

FS/FT
3 Transoceanic 3000-1's all 3 work all bands, none are anywhere near mint but one is in good condition the other 2 are fair. One is missing a small knob and the front cover extender the other 2 are mechanically there, one has the battery box, 2 have the log books, one has a perfect handle the other 2 have cracks all the antennas are good. There is some bubbling on one and pitting on one and minor chrome pealing on one. All need a good cleaning but should be able to make 2 fairly decent TO's out of 3. Any other questions?
Asking $225 for all three plus shipping or consider trade for Sangean 909 or Radio Shack equivalent.

Thanks

Butch

Hi Robert,

These are the units that worked witht he 618T(3) in the avionics
configuration. They are approximatley cube shaped, SEE fair radio catalogs
as they have pictures of the thing.

Hope this helps

Time to make time and room for some new (old) toys: Will consider offers or trades involving National NC-44 or 45, SW-3 RME 69 or other pre war rcvrs.

All items are plus shipping:

HQ-120x Very nice condition. Front panel and dials are white and look just about new. Recapped, and all out of tolerance resistors changed last fall, Minor corrosion on side handles. S meter is sluggish and osc. pulls on strong signals. $175. Includes manual reprint.

Globe Scout 65B. Very nice condition cosmetically. Includes original manual for 65A.
Plugged it in after getting it and no oscillation. $140

Lettine Model 240. Recently redone and on the air. Good cosmetic condition Includes 80-10 PA coils and 40 meter Osc. coil. Also in nice shape. $180. Includes "manual reprint, and part of original manual.

National 173 w/ matching speaker. Working. Rcvr fair to good cosmetic condition, with some scratches. Speaker has large square hole on side and scuffing
Some lettering missing on tuning dials, but have spare ones that I will include. Includes manual reprint. $200.

Hallicrafters S 119 Skybuddy II. Almost NIB. Very clean and shiny. Works. Includes manual reprint. $75

Heath HW-99 Not a true BA but will sell to make room for more BA's. 50 watt 80, 40 15 and 10 mtr CW xmtr with built in power supply. Just used it on vacation. $165.

Heath HD-10 Keyer. Includes manual $40

Original Viking II and 122 VFO manuals $35 for both, shipped priority.

Pictures of most items can be seen at web site.

He *did* say, somewhere in there, that he can tell you where to find
one if you want to buy it. The implication is that he doesn't sell
the tool, and isn't interested in selling the one he has and having
to buy more.

If you *do* want to buy one, why not send him email asking who
sells them?

Dave

This is the original old amp from the 60's. Built like the USS New Jersey. Runs a pair of 3-400Zs. Has a replacement Peter Dahl plate xmfr 6000vct 500mA ccs. Xmfr alone weighs 34 pounds and right now costs $295 from Dahl.

All components are here. Tubes are full out or very very close, at least 90%. The amp is around 90 % disassembled. Started out as a clean up project but no time to finish. Total package weighs 154 pounds. Shipping weight will be more, around 180. Will have to be shipped in several boxes. Buyer to cover all shipping costs. Won't be cheap.

Price is $475.00. If you have the time to re-construct this amp it will last another 35 years no problem.

please include ur zip code when replying. My number is 619-470-6528 although I am not home that much. If you like send me ur number and I can call you if you have any questions. prefer e-mail correspondence though.

Johnson Viking Directional Coupler Indicator catalog number 250-38.
Cosmetics are exceptionally clean, an easy 9/10. not tested but I inspected
it thoroughly and the meter movement looks intact and not damaged. The
switch and potentiometer seem to be okay. Looks like it has very little use.
The probes are intact. No book. Price is $23.00 shipped continental US.

I have a Johnson TR switch for auction on eBay. The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=135770230

and the blurb is

This is a near-mint example of the venerable E. F. Johnson T/R switch. A "must have" to complete your boatanchor station. This one has a very small amout of corrosion on the case - about 10 small "pits" scattered around that will polish out (I tried one and it came right off) to give a near-mint condition finish. The internal chassis has absolutely no corrosion and the original rubber feet are still spongy and crisp. The cord looks brand-new; may have been replaced at some time but I've had it for 10 years and I didn't replace it so it may well be original. Comes with copy of the manual and a few miscellaneous handbook/magazine reprints that I accumulated over the years on the subject of T/R switches and their use. You would be hard-pressed to find a better example of this classic boatanchor accessory.

Closes 8/1/99.

Thank-you.

The Antique Radio Collectors & Historians (A.R.C.H.) of Greater St. Louis, MO will hold their Fall Swapmeet & Picnic on Sunday, September 26th, 1999.

Swap begins at 9:00 a.m. Lunch served starting at 11:30 a.m. Location is American Legion Post 300 in St. Louis, MO. Visitors are welcome and encouraged to bring items to swap. Your family is also welcome at this event.

Directions: From the Bayless Ave Exit on I-55 go west on Bayless Ave (right turn if southbound on I-55/left turn if northbound on I-55). Go past the first stoplight at Union Rd (Morganford to City people) to the second stop light at Hildasheim Ave and go right. Go to the first street on the left (Heege Ave) and turn left. Go past the first street to the large blue building on the left. The blue building is Gardenville-Affton Post 300. The exact address is 4760 Heege Avenue..

NO Swaptable Fee. Please bring your own swaptable. A $3.00 nominal donation is requested to cover the cost of the picnic.

Activities include:

*Swapmeet of Radio/TV/Antique Electrical Apparatus
*Raffle of Radio & Radio Related Items
*Barbecue Pot-luck lunch (please bring a dish)
*Antique & Classic Radio Demonstrations

For more information about our antique radio club and the swapmeet, please drop by our web page at:

http://home.stlnet.com/~keymaster/arch/arch_home.html

Please e-mail me at keymaster@stlnet.com if you have any questions. Look forward to seeing you all there!

The clue is in the fact that 3 people were suspended. Two people cant pull this off. Let's suppose Moe wants to buy an item and it's worth $500 at most. Moe bids $100, Larry bids $1500 and Curly bids $1525. Just before the end of the auction, Larry and Curly retract their bids and Moe wins the auction for $100. This isn't brain surgery guys.

>the auction, Larry and Curly retract their bids and Moe wins the auction for
>$100. This isn't brain surgery guys.

It could be done with 2 people.. Moe is the first bidder with a proxy
bid of $1525. The item then starts at the opening bid of $100 (if that
is what the seller sets as the start). Curly comes in with $1500, and
the price shoots up to Moe's $1525 (or whatever the increment above
$1500 would be). Nobody else bids since $1525 for a $500 widget is way
too much. Thirty seconds before the auction ends, Curly retracts his
bid (you don't have to give a reason). Since there are no snipers
lurking around, the auction closes at $100.

Having a reserve is one way to beat this scam, but a lot of us don't
like to use reserves.

I need an oscillator box for a WWII military RCA RBB Navy receiver. The box for my set is missing. Will buy or have a working RBC-5 that I can trade for an RBB. Located near S. F. bay area.

Thanks,
Joe S.

I have the following parts for sale from a Heathkit SB-1000/Ameritron AL-80A amplifier. All parts were removed by me from a working unit that was being re-built:

1. Electrolytic filter board p/n 85-3295-01. Has all eight of the 210uF 450 vdc/525cdc surge Mallory electrolytics. Also has all of the equalizing resistors accross each cap. Also all of the high voltage meter multipliers. In fine shape.

2. Rectifier board p/n 85-3294-01. All ten of the 1N5408 diodes are on the board along with the bypass caps that are accross each diode.

3. ALC/power board p/n 101086. All components are on the board.

4. Mulitmeter select board p/n 85-3297. All parts have been removed from the board except for the switch.

I want to sell all of the parts as a package for $65 shipped anywhere in the continental US. I personally pulled all of these parts from my now homebrew 3-500Z amp which at one time was a Heathkit SB-1000.

Why make it nationalistic Walt? I responded the way I did because of the tone of your post not because of where you live.
If you look at the offer he proposed he clearly isn't going to retire soon on the hand full that may take him up on his offer. It's a very expensive tool if you buy it from Kenwood, and for those not willing or able to modify a set of needle nose pliers it seemed like quite a nice offer. The traditional Ham Spirit is very much alive and well here too.

> But then I guess that's the difference between the Yankee capitalist
> culture, where money is King, and the more liberal outlook on life we
> still (fortunately) have here in Europe .....

Heh heh, yea I know that's why there is more Dutch and English investment in the U.S than any other foreign country. I guess you know a good thing when you see it. Your right about being a capatalist country though, it's nice to live in a place where you can be middle class, rasied by a stepmother and go on to be the President of the country. Money isn't King here Walt, we just have so damn much of it, it makes it look that way.

Hi Everyone,

Just purchased this old set and was hoping the experts might be able to tell me something about it. First, when was it produced? Second, is the ground terminal the black one, next to the red one? Third, what is that thing sticking out the back named "remote" (possibly for an antenna?) and lastly, is this a fairly good set as far as receivers go?

Thanks!

1384. Need battery info on B&K Model 120 VOM

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-01 00:00:00 UTC
From: dunnr@ix.NETcom.COM
Message-ID: <000b01bedc51$f775b260$b0affea9@dunnlaptop>
Source record: 81206

Hi All,

Part of the stuff I found last week at a yard sale included a couple of old but good quality analog multimeters (VOM's if you please). I got the Simpson 260-6P up just fine, just needed a thorough cleaning, batteries, a knob, and some epoxy for a case crack and it works great. I also picked up a B&K Model 120 "Laboratory Volt-Ohm-Meter" that is in great condition but needs batteries.

One of the batteries is clearly a D cell but the other is unknown. The unknown battery has a connection on each end like a D cell but is much smaller and appears to be rectangular. Estimated dimensions are 1 5/8" long by approx. 1" wide by 5/8" high. Anybody know what the battery is that goes into this meter? It seems to me that the Triplett 630 used an odd high voltage battery for the high ohms range maybe this B&K Model 120 does too. I don't have so much as a schematic for this meter so I am in the dark. Still, it is a good quality meter along the lines of the Simpson 260 or the Triplett 630 so I would like to put it back into service.

Thanks in advance for all the help.

Rob

National HRO-7 receiver
It's in very good cosmetic condition inside and out. I don't have the power supply or speaker. It comes with the 0.7-1.4 MC coil.
Since I don't have the PS, it's untested, but I looked through it and don't see any visual indications of a problem.
$60/obo or trade for old radio or hi-fi parts or equipment

Best Regards,
Steve

Well, the current MSC sale flyer does have an adjustable
pin spanner for $9.95. It would do this task. These nuts are
commonly used by the optical and electronic industries in
a variety of sizes, so it shouldn't be surprising that there
are ready made tools to fit them available from the larger
tool jobbers. IMHO Kenwood is just gouging at $60.

In article <37a33694.13941750@news.total.net>, ydussaul@total.net says...

>I have an SX71 which is very unstable in CW...Just touch the table and
>the frequency shifts... Where should I look to improve things?

I thought that this sort of thing was designed into Hallicrafters
products... :^)

Seriously, though, I have an SX-100 that does the same thing (my SX-71
does not have this problem, however). It was suggested to me that what
could be causing this problem is corrosion on those brass wipers that
make contact with the rotors on the tuning capacitors, and the trick
will be to clean them without ruining the tension necessary to maintain
their contact on the rotors.

If you've got something like an insulated alignment tool, you might
also want to try *very lightly* poking around a bit in the oscillator
circuitry. Very lightly, because touching or tapping too hard will
be just like tapping on the table, and you'll never narrow down where
the problem is.

Something "mechanical" is either adding or subtracting capacitance in
a frequency-sensitive portion of the circuit.

C.K.

It wouldn't be surprising that it cost a lot more than $37.50... I've seen
specialty crimping tools sold on Digikey for $900.

He did say who sold one, Kenwood for around $60 or 80, it
was posted awhile back. If he had this custom machined it
isn't cheap, I just had some stuff welded the other day & 20
minutes cost me $45.

Boatanchorers

Available is a rack mounted transmitter stack assy. I am guessing its of 30's vintage, but I realy dont know. It has coils for 28 Mc. It has a E.F. Johnson tag on one of the antenna tuning caps. Maybe someone out there can ID it. It is available for best offer. Located in north-central Illinois. Check out the page I made for it.

http://www.imaxx.net/~pgv/Transmitter%20Tower.htm

1422. Are U an MV owner that uses Military HF radios??

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-02 00:00:00 UTC
From: Patricia Gibbons <wa6ube@ix.netcom.com>
Message-ID: <37A65DAD.452C@ix.netcom.com>
Source record: 81091

I would be interested in hearing from
other MV owners that are also
radio amateurs and have, or plan
to install Military HF radios in
their MV's ..

Please e-mail me at: <wa6ube@ix.netcom.com>

Cam Ogan, WA6VVC, and I are trying to drum up some
interest on standardized HF radio freq's
for military SSB gear that only has USB
available.

This message is to try and see how much interest
there would be from the Military Vehicle community.

Tactical FM on 6-meters is fairly common at 51.0
and 51.1 MHz, but HF assignments are far from common

Is this too far off-topic ?? I hope not since we
are talking about military radios in military
vehicles..

Thanx

Trish

1426. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <7o36k5gcd1@news.hawaii.edu>
Source record: 81143
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O
(rec.radio.amateur working-group)

You might as well use a 4-ohm car speaker to get a little more volume
with less distortion. Radio Shack has a large selection of 4-ohm
speakers.

John:

You miss the point that the always grouchy and curmudeonly Mr. Hawk seems to be making.....he just isn't happy about the world going somewhere that he hasn't commanded.

While his posts would be somewhat funny every now and then, and if he actually would say something more well thought out than "EBAY SUCKS" twenty times per day, he may actually be able to make some sense. As it is, he merely comes across as a dolt who can't put together more than 6 words at one sitting at the keyboard.

I think he has to take a break under doctor's orders to allow the blood pressure medication to have effect, or the anuerism in his brain will explode!

Cheers
Lee Smith

From: dunnr@ix.NETcom.COM
Message-ID: <008a01bedceb$9d10c5e0$0906fea9@dunnlaptop>
Source record: 81152

Hi All,

While trying to find out what battery I needed for an old B&K VOM I stumbled across a couple of web pages that I thought might be of general interest.

First is the Eveready Tech Data web page at http://data.energizer.com/ . Lots of good information here and if Eveready still makes it you will find data for it here. Interesting to note that there are still lots of higher voltage batteries available (in carbon-zinc, no energizer bunny for boatanchors).

Second is a Denver, Colorado company called Car-Go that has an Eveready Product Listing that has an exhaustive cross-reference listing that includes popular battery manufacutuers, the generic number such as "U10", and most interestingly the military part number such as "BA331/U" To get there go to http://www.car-go.com/ , select "products" and then "Eveready". There are six pages of Eveready listings and to get to the next one from the one you are on you have to click the little energizer battery logo at the upper right hand corner of each web page.

Thanks to all who replied to my request for info about the battery for my B&K 120 VOM. With you help I figured out that I needed a U10 15 volt battery, Eveready No. 411.

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-02 00:00:00 UTC
From: Ham <ham@my-deja.com>
Message-ID: <37A5AD6B.B44B6DED@my-deja.com>
Source record: 81155

Whine if you must about eBay. Personally I don't object to them.
Filters work fine to eliminate them and the DEL key is on most keyboards
still.

Complain DIRECT TO THE POSTER and politely ask them to put FA and/or
eBay in the subject line! AND put "WHINE" in your posting so it can be
skipped also!

If they are so objectionable WHY DO YOU REPEAT THE ENTIRE EBAY POST WITH
YOUR WHINE???

It sure provides additional "coverage" for the eBay poster!!!!!!
Something YOU claim you object to???

Whether anyone likes it or not, eBay now has, as of yesterday, 91
pages of listings just for ham gear. Much of it is junk, much of it is
overpriced, many of the sellers and buyers are crooks, but at least
they typically show pictures of the items, and that's more than you
can say for the classifieds in the back pages of QST.

eBay is just another way to trade ham gear. Take the good, forget the
bad, and get on w/it...

m/h/opinion...

1441. Panels for Globe King 400 Needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-02 00:00:00 UTC
From: Jim Allen <jim_allen@hp.com>
Message-ID: <37A5B0A7.64E1@hp.com>
Source record: 81158

The Globe 400C is now on the air! I've started to
do cosmetics and am in need of good panels for it.
The modulator and power supply front panel aren't in
great shape. Anyone out there with a junker that
has clean panels that would like to part with them?
I'd also trade my dirty ones for your good ones :)
-with a little money.

I think the panels for the A and B are the same, so they
would probably work.

Thanks,

Jim

1445. Re: TRADE ON EBAY AND GET SCREWED. just my opinion..

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-02 00:00:00 UTC
From: Jack Taylor <n7oo@theriver.com>
Message-ID: <zRkp3.63637$AU3.1722645@news2.giganews.com>
Source record: 81162

Auction sites in general, are good for the seller but probably not for the buyer. Frequently on computer items, http://www.pricewatch.com will report lower prices on identical models being sold by regular outlets, than what 'auction frenzy' has driven the item to. This explains the disparity between common boatanchor prices as found at swapmeets and at the auction sites. Indeed some people make a living buying at the 'fests and selling as either an auction item or here on the newsgroups.

The savy buyer rarely ever buys items sight unseen and is far better off to take the time and trouble to attend fests in his local area.

Ray:

Perhaps you have something there.....I have heard it said, there are few people as outraged by a conduct as those who have been reformed. For example ex-smokers, ex-gamblers, ex-sinners, ex-drinkers, etc.

Maybe he was bounced from Ebay because he was bidding uncontrollably and lost his house or something. Perhaps he now posts from under a bridge somewhere using an old '386 laptop while warming himself over a burning tire. Makes as much sense anyway.

Still, it is comforting to know tht there is someone who is all too willing to "protect us from ourselves" when it comes to spending our own money!

alt.ham-radio.marketplace,rec.ham-radio,rec.ham-radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

13.8V, 8A continuous, 12A peak Nucleonic power supply. Has current meter, overvoltage protection, and foldback current limiting beyond 12A. Output voltage regulated to +- 200 mA for all design loads. Excellent condition cosmetically (It has an attractive brushed copper front panel) and operationally. I'm selling it because these days I spend more time on computers than hamming.

Price: $50 plus shipping (which will not be negligible, since it's well-made, that is to say, heavy. I have no means of measuring its weight accuratedly. I Will ship it parcel post if that's OK with you. If not pick method.

Includes brief manual.

From: Bob <bmiller@calweb.com>
Message-ID: <37a64a6f@calwebnnrp>
Source record: 81181

For Sale: Bendix/ Micro-Match low power terimination watt meter. 1.2 watts full scale, nominal 50 ohm termination with 1N23B m/w diode detector. Meter reads 1.2 watts FS and 4 Watts FS and also has a SWR calibration scale I presume was used on other products. Unit is in a compact sloping front enclosure with RF input via an "N" Connector. Unit is in like new condition. I've tested the meter movement, the termination, and the diode. I have not verified calibration. There is a calibration pot on the back of the unit for that purpose. Great toy for the QRP operator or other low power RF measurements. JPEG on request.

$50 post paid conus

Tnx for the read es 73

Carter:

I built model airplanes and trains for quite awhile. Try placing the radio so the surface is horizontal, and just letting some water with a drop of dishsoap soak into the decal. It should soften up enough to be removed with a stiff paint brush. Next alternative is to visit the local hobby shop that sells trains. Ask for decal remover...I forget which company makes it...cost is about $2 for a small bottle that will ast 14 lifetimes.

The trick is to get the thing softened up and you should be away to the races after that.

I lean strongly towards a DX-100 (not the B version)
with the VFO dial removed. This increases the
drag coefficient and creates a sort of 'sea anchor'
effect. Useful in storms and rough seas.

And run crystal control of course, since the VFO is
rendered inoperable.

Hope this helps.

no, they will not rob you blind unless you BID on the item. nobody is
holding an ebay gun to your head. i suppose you whine up a storm when
you dont like the price a guy is asking for an item you want at a
hamfest right? its only fair that you do since ebay is nothing more than
a huge garage sale with people competing for the same items. if you dont
like the price then dont bid/buy. DUH... how simple can it be. quit your
ebay whining already.. its called freemarket. the price an item hits on
an auction is whatever the market will bear. if there is someone that
will pay more than you then you are going to hassle the guy? let it be
already...

I think the the last writers intent was not so much about Ebay but that the seller did not list the heading as "FA" so we don't have to scroll thru the post and then find out it is an auction item.
I agree that the seller should make this clear and not waste everone's time when looking at 50 odd posts..

Motracs should work pretty good, and since they have those nifty
little handles on the end, you could tie several radios on the line,
depending on the size of your boat. Tie your line securely or else
they might come loose and be lost on the bottom of the lake forever..

Tnx for all the replies. I appreciate your suggestions.

I was able to get the extraneous decals removed from the SX-99 I'm reviving by soaking the decals with a mixture of dish soap and water. After 15-20 minutes, the decals came off without too much trouble just using my thumbnail.

I have always believed that the best boatanchor is not served by a VFO, but rather should contain plenty of rocks. A Viking II with a full load of rocks meets my requirements very nicely. The rocks supply extra stability even under adverse conditions.

Yo' John,

They are freekin' sweet! I have three of em.
you cant really use em on the ham bands since most of the
ops aren't concerned with "hitting" a particular freq. and most
of that "JAP Crap" couldn't do it anyway, but for hurricane,
SWL (most of em' anyway) and mil listening they cant be beat.

They are triple conversion, cant rattle off the IF's
(20 mc and 30 mc are the first) the final IF is 500kc. Typical
hassles are the 15 mc band wont lock up, the freekin 5 mc ref
osc is "cranky" at best. The "basic" manual is about 500
pages mostly fold outs and will cost about 45 bucks just to
copy at kinko's. The detail module repair and alignment 3
volume set (which would be nice but not required) is a few
hundred. ER did a piece on em too.

The ISB mode is most excellent! Not as sweet as an
R390/CV-157 combo but with the correct dose of beer Merlin
Network 1 can knock you off the chair if the "ether" gods
are on the job.

Call Mike Murphy @ Murphy's surplus in CA, he may
still have some modules/parts rigs and manual copies. pse let
us know how you make out with yours. They are worth "dickin'"
with.

Thanks to the suggestions from a couple of people here, and the help of the folks at Antique Electronic Supply, I now have a new set of SVETLANA 6550Cs in my 100V. If you ever need to replace the finals in your 100V or 200V, I suggest you look at those tubes first. Luckily, the SVETLANAs are the cheapest of the current 6550s, at only $22 per tube. Like the Tung Sols I replaced, the two new tubes appeared to be identical but I found one to be a bit taller than the other when they were installed in the final cage. The AES people were kind enough to get out the ruler and verify that they were both less than the maximum height I could handle before they shipped them to me. Note that the only U.S. made new 6550s I could find were GE 6550As and they would NOT fit in the 100V cage. About 1/8 inch too tall. NOS Tung Sol 6550s are still available, but the price for a pair is $150 and up (I was quoted $280 for one pair!).

I AM POSTING THIS MESSAGE TO THIS NEWSGROUP AS I SEE ROLAND GETER CONDUCTING BUSINESS ON THIS NEWSGROUP. IT IS MEANT AS A WARNING TO THOSE CONSIDERING DOING BUSINESS WITH ROLAND GETER, I AM NOT LOOKING FOR FLAMES, REPLIES, ADVICE, ETC...THANKS

Hello Everyone,

On August 26, 1998, I posted a warning message about doing business with Roland S. Geter, Sr., WB6LNA. Mr. Geter posted a "wanted" message on the newsgroups in late June, 1998 for laptop computers for a "law enforcement" project. I e-mailed him about a Toshiba Pentium notebook I had for sale that was not working and needed minor repair. I specifically explained to him what was wrong with the notebook, we agreed on a price and Roland Geter agreed to pay shipping. He requested Fed Ex C.O.D. shipping, since he "did a lot of business with the shipping depot in Phoenix Arizona" and things would go a lot easier. It cost me $132.58 in shipping and C.O.D. charges to ship the package. I shipped the package as per his specifications and request and advised him of such. When the package arrived in Arizona, Roland Geter failed to pick up the package as requested by Federal Express several times. After several days the package was returned to me less my shipping charges I had already paid.
After that, I contacted Roland Geter several times by e-mail and phone to no avail. He always told me he was sending payment but never did. I finally took further action in late August, 1998. I posted the original warning message, contacted the proper authorities and filed a formal complaint with the Maricopa County Sheriffs' Office in Arizona. Roland Geter had stated to me he was a deputy with that sheriffs' office, (which later proved to be false).
After a lot of pressure from many on the newsgroups and the sheriffs' office, Roland Geter contacted me in late September, 1998, to call a "truce" and settle our dispute. I had received several e-mails from others who had been ripped off by Roland Geter so he agreed to pay me and then "square up" with the others. At that time I also agreed to stop the pressure from the newsgroups and the sheriffs' office.
To make a long story short, to this day I still have not received my money. I have tried to contact him several times a week to no avail. The others involved also have not received payment. I made the mistake of not doing a search on Deja News about Roland Geter, if I had, I would have found many others who ended up with the same fate as I did with my business dealings with Roland Geter.
I am posting this message to warn others of Roland Geter's bad dealings, i.e. bad checks, failed payments, bad trades, etc., that he

has done to many, many others and myself. Do yourself a big favor, do not deal in any way with Roland S. Geter, Sr.

Hello Jeff:

While I agree that the practice of cross posting may be irritating, there are some who don't subscribe to all newsgroups and see a crosspost 25 times in a daily check for listings.....not defending the practice, but just trying to explain what may be the rationale for it happening.

There is a very small group here that detest anything with the word Ebay in it, and look upon that medium as being the very devil itself......just watch the behaviour of some of these folks going almost apoplectic at the slightest provocation.....I think it's great humor myself....sort of like teasing the Unibomber by sending him a computer in the mail.

Collins AN/ARR-15's make good boatanchors as they have
handles on the front for the anchor shakles..
They are also heavy since they have 28 volt DC
motoros in them..

Actually, you can use the AN/CRT-3 Gibson Girl lifeboat transmitter
as a sea-anchor.. just rig out the kite and place it in the water.

Don't tug too hard on the antenna lead, even tho it is woven
braid, it is still rather light-weight..

1500. Removing Decals

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-03 00:00:00 UTC
From: cartercook@aol.com
Message-ID: <19990802221940.24126.00005943@ng-fw1.aol.com>
Source record: 81094

I am in the process of reviving a Hallicrafters. Some former owner stuck decals - like the ones that would decorate model cars or airplanes - here and there on the front of the receiver. What's the best way to get these things off with the least damage to underlying paint?
Carter Cook

1501. Help: Anybody using L.L. Grace DSP-12 modem?

I tend to agree with the DX-100 anchor, unless
the boat is ex-Navy surplus. If it is then
you might want to try an ATC transmitter or
perhaps a couple of TBX-8 generators.

If you really need that extra hold, try a bc-610 w/tuner securely mounted on top for a little extra mass. If that won't hold the boat, you might have to go into the Gates BC-1 or bigger league, that should hold a few tons in the water.

This is a military unit with a Johnson 229-202 roller coil that is in need
of a major cleaning and it is frozen. Front panel of this thing reads:

Rf Communications Inc.
Rochester, NY
Antenna Coupler Module
Frequency Range: 2-3 mhz
Antenna length: 35 feet

It also has some large ceramic trimmers mounted on the inside front panel.
It may be out of an aircraft of a shipboard coupling panel.

price is $18.00 shipped.

From what I heard he _did_ offer it on load free of charge. There was a returnable deposit, which I believe is fair when lending over a medium as diverse as the Internet, and the non returnable part could be interpreted as paying for the weardown of the tool.

Mineral spirits (varsol)removes sticker goo without attacking the underlying finish. Soak the sticker for a few minutes before attempting to remove it. Best results if you peel the sticker with a razor and soak the underlying paper/goo with the solvent. If you're in a hurry you can also usually get away with using xylene, but it's a bit hotter, thus riskier to finishes. Xylene also works on overspray, latex paint, and old scotch tape adhesive. Look in the paint section of the hardware store for a yellow can labelled "Goof off", or General Paint thinner #3. Both are xylene. Never use toluene or lacquer thinner! Some people use WD-40 but IMHO it just makes a big schmeery mess. Good luck.

Well, I had some success with a PE-103 Dynamotor, which came with two long husky leads. This stabilized my canoe in white water rapids, but nearly drowned my dog in the lake, when he got tangled in the cables. Must leave your doggie home. (also, be sure your kiddies have had swimming lessons, and Red Cross WSI certification.)

Good Luck,

Plum

A 2000lb boat normally only needs a medium sized anchor like a Johnson Ranger.
Larger boats usually need something a little heavier like a DX-100 and really
large boats should use nothing smaller than a BC-610.
Good luck!

According to Chuck Dachis' Radios by Hallicrafters, your rcvr was manufactured between 1950-58. It sold new for $89.50. Yours was the successor to the S-53 which was produced from 1948-50 and was ten bucks cheaper.

The best looking BC-610 transmitter I've ever seen
is currently available near Houston, Texas.

This transmitter looks almost new- like it just came off the line.
It's a really cherry restoration. A lot of care and work
went into it. I think there were some other goodies with it, too.

The asking price is $400, which is very reasonable considering
that an unrestored unit goes for about $300 and you won't
have to find all those parts and do all that work.

Phil Mills < plmills@ibm.net >, as fine a gentleman as I've known,
has the unit and will help with delivery within a reasonable
distance from Houston. Please email him directly if interested.

I have no monetary interest in this- just helping Phil
get this fine transmitter to a new home.

>Larger boats usually need something a little heavier like a DX-100 and really
>large boats should use nothing smaller than a BC-610.
>Good luck!
>Jim W3ATV

Don't forget the anchor line! I find that RG8X works great for those
lightweight boats, however, I have noticed some of the packet folks using CAT5.
But when comes to a larger boat don't settle for anything less than hardline.
I would say a reel of about 500 feet would do.

Prretty good appearance and performance. A slight mod in the front panel added an RCA audio jack. AC power supply has been solid-stated. Copy of manual, not original.
I think it's worth $150. You may try it and buy it, if you like, in McLean, Virginia, very near D.C.

Duh!

Just to make it all painfully clear...

These folks all knew exactly what the original poster was asking - point is he's asking in the wrong place! He didn't LURK before he TYPED. Hence all the on topic replies.

This is a not so uncommon occurrence in these parts and actually has helped me to learn a bit about whats out there in anchor land. If nothing else, it makes for some cheap entertainment.

So - lesson is... LISTEN before you TRANSMIT - even then drink a pot or two of coffee first, preferably in the company of an elmer.

Ozona Bob's BC610 is for sale, pickup only in Ozona, Texas. This is a very nice unit and includes the speech amplifer and other accessories. I have seen the transmitter and heard it on the air. It is really nice. If interested contact Bob's daugther, Debbie Moore, at home-915-392-5473 or at work-915-392-2022. Debbie also has some other boatanchors from her father's estate for sale: Hammarlund HQ-160's and 140's; Hallicrafters SX-62's and 42's and 43's. She also has a mountain of tubes, and lots more stuff that I am forgetting. It would be worth a trip to Ozona to see all of this.

> My boat is about 2,000 lbs, 20 feet long, and is used in small
> lakes. What size / type anchor should I use?

Remove the radio antenna from the cabin
roof, tie a rope around it, and spear it
into the bottom of the lake. That should
anchor your boat in place.

If the antenna is permanently mounted on
the cabin roof, you could upturn the boat
and let the antenna drag on the bottom of
the lake.

For Sale:

Complete Hallicrafters lineup consisting of HT-44 transmitter, SX-117 receiver, PS-150 power supply and all necessary interconnect cables for full transceive operation. All units work fine. Good output and audio reports from transmitter. Receiver is stable and sensitive. I would be glad to schedule a QSO on 20 or 75 for over-the-air checks. Original manuals are included.

I would like to sell as a set for $425.00 plus shipping. Would consider splitting up, if no takers on the complete set, so don't be afraid to ask.

This is a nice looking set and we've all seen the Ebay prices recently so here's a chance to get them at a more realistic price.

1553. Questions on CE-100V

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-04 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <7oatc6grg1@holly.prod.itd.earthlink.net>
Source record: 80997

I'm just about finished with this restoration project, and have some questions for current 100V owners.

1. When setting the AM power level, I'm unable to reduce the input power below 135 watts or so. At that level, there is no output power. Anyone else have that problem?

2. An Electric Radio article in October '91 talked about modifying the bias supply to provide an adjustable bias pot. Has anyone done that and if so, did you just use the circuit diagram for the 200V? I know that the bias dropping resistors for the finals and buffer stage are buried beneath the bandswitch sections and sure don't want to even move them.

3. After a complete alignment, I find that I still have only 85 watts output on 10 meters. The manual talks about rewinding one of the mixer coils for 10 meters to improve the Q and thus the drive to the finals, supposedly providing full output. Has anyone made that change and if so, how much effect did it have?

4. The calibration of the "input power" scale on the meter is highly suspect. I haven't yet measured the plate current, but here's what I see: To get to 100 watts output on 80 thru 15, the resulting input power reads off-scale, above 200 watts. Do you observe the same thing in your 100V? This 100V has silicon diodes in the HV supply, so the HV measures 660VDC instead of the 620 or so as stated in the manual.

Thanks for any and all advice/help.

1558. CentraLab 9kV 17 pos. ceramic switch $25

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-04 00:00:00 UTC
From: zeitler@ibm.net
Message-ID: <37a920b3@news1.us.ibm.net>
Source record: 81002
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.swap

CentraLab JV-9000 9kV 2 to 17 positions single section ceramic rotary switch. Same switch used in the Dentron MT-2000/3000 and Swan ST-1 tuners. A 3 section version of these was used in the Alpha 76 and 78 amplifiers.

These will handle 2kW with ease.

$25 shipped or 2 for $45.00 shipped continental US.

Hi,

I have always had a major interest in the HBR receivers, even since I was a kid looking at them in ARRL literature.

Do you have one for sale, working or not?

How about any leads on one for me?

Please contact me by email.

Thanks,

Bob

Floyd,

The same is also true for my CE 600L which needed a new 812A. The Svetlana 812A
was only $30 and does a good job. NOS US 812A are going for around $50 each.

Gang,
I believe the complainers we've been seeing here despise the unnecessary cross-posting of eBay ads onto this NG (it *is* cross-posting). I check eBay daily for DX-60 transmitters -- it would be redundant for sellers to duplicate (cross-post) such ads onto here. We have a pretty good Internet hierarchy today and powerful search engines are available; that hierarchy makes all the various categories on the net easier to peruse. No need to duplicate postings from one area onto another; it uses up disk-space, band-width, and patience.

Well, now that you're an "expert" on eBay, maybe you can get on with
your life and stop posting your SPAM COMPLAINTS about eBay....

Spend your energy finding out how to set news reader filters so you
don't have an anxiety attack each time somebody posts eBay auction. Or
better yet, stop trembling and figure out how to move to the next
message without reading the eBay postings!

GET A LIFE!

> My boat is about 2,000 lbs, 20 feet long, and is used in small lakes.
>What size / type anchor should I use?

You must first realize a couple of basic facts of how a body of water reacts under severe weather conditons.
My first boat in 1973 was a 13' Hobie Cat sail boat.
I was inexperienced and on a relatively small lake about 3 miles in diameter, in Minneapolis.
A cold front came through, my boat capsized. I almost died out there. I'm lucky I am still alive now, almost thirty years later to have a Collins R-390 in the process of being completely restored including the original Meters.

Another time i was out in a canoe alone and a mere 14 mph breeze pushed my boat across a bay and although I was in real good shape I was beached on the opposite shore and had to have a 17 foot motor boat tow me back.

On the other hand I have cruised on Lake Superior, the largest freshwater lake in the world, under both of the aforementioned weather conditions, on a major sized Ferry Boat and.... hey no Problem.

But I wouldn't have wanted to be off the coast of Maine under hurricane conditions even with the biggest oceanliner in the world.

Soooo......The Bigger the Water, the Smaller the Boat.

To answer your question though, without knowing the critical information about the size of the boat, the size of the body of water, or the severity of the weather, I would say, just to play it safe, you're going to need AT LEAST three or four International Short Wave Radio Transmitters.

Hi I have an OLD Collins KWM-2A tranceiver. It appears to be in excellent shape (probably 8.5 out of 10). It does not have a power supply. The tranceiver has the winged emblem, thumb hole in the top cover and from what I understand most importantly is that it is serial number 156. I would like to sell the radio but have no idea what it is worth. If anybody would be willing to give me some insight on the value of this, I would appreciate it.

Hi All,
I recently got another NC183D, go figure. It appears that the power xfrmr is original and is potted. This unit had been stored for quite a while and the tar/epoxy had leaked a little on the chassis around the 6v6GT tubes. This was a problem to clean-up until I used a product that I have used frequently for antique furniture. The cleaner is called Kotton Klenser and it did an outstanding job of removing the spill without harming the lettering used in the tube indicator layout. It also did an excellent job on the cabinet without damaging the control lettering. This stuff is great, non-toxic and made here in the U.S.A. in Braden, Tenn. If you have a set that needs restoration and it is either wooden or metal cabinet, I would highly advise that you try this stuff. The toll-free number for information or ordering is: 1-800-238-6969
rgds,
Mark S.

Take the mic cable and all to a computer cabling outfit, a 2 way radio shop, or anyone who installs telephone equipment and ask them to please crimp on a new connector.

I have a HT-41 amp which appears to be in fine shape. It puts out about 600-700 wats but I would like to replace the 7094 tubes with something more easily obtainable. I believe that that the P.S. puts out 1800V and at least 500 ma. Anyone out there in boatanchorland have any suggestions? I'm not looking for a legal limit amp but something that will run 6-800 watts out. Would appreciate any ideas/schematics/etc.

Those pesky plugs are the industry standard in the commercial radio business and have rarely been a problem -
If it is an RJ11 - 6 pin conductor you can buy a 6 pin crimper for about 20 -30 bucks (buy a nice one) and you can get the plastic pieces fir about 2 cents each.
You make note of the wire sequence (1-6) and cut the old one off - insert the line into the stripper into the deisgnated stripper - measures length - and strip - insert the wires into the plastic plug - crimp it and you have a new plug-

I would never want to go back to the old mic plugs - they take way too long when broken - i can recrimp a new plug in under a minute -
if they are an 8 pin plug - get an 8 pin crimper - most mics are standard at 6 pins

The Simpson 260 was introduced in1937.
The first version was the 260-1 it had 4 flathead screws at the corners
(front Panel), The 260-2 introduced the (traditional) molded front panel and
10 amp range.
The 260-3 introduced PC board construction and improved rectifier circuit
for increased AC accuracy.
500KC
3A -shielded meter
260-4 calibration circuit
260-5 meter protection varistor, Higher voltage range
260-5p more meter protection overload relay (99% goof proof)
Seers 1 and 2 did not have fuses, frequent changing of the 11.5 ohm bobbin
resistor on the RX1 scale when you screwed up.
Batteries?.....Which one do you have

Have a reasonable supply of small, (about 3" dia) sirens that operate off of 12 vdc. These are well made units and include a sturdy steel mounting bracket. The siren head has a high quality chrome finish. Use them for home brew alarms. They are loud.
Only $12.00 each + shipping UPS

Hi,
YOu can use the 572B's instead of 7094's. 572B' will take higher plate voltage
so you have to chnge the rectifier from 866's to silicon diodes and capacitor
input circuit instead of choke input which will boost the B plus voltage to
about 2100V or so. Then you can expect about 700 Watts out depend on the band.
You may try 4cx 800A single but it requies more than average modification.
Good luck!!!
de K6hm

There is a product sold in automotive stores that's made for removing
bumper stickers and decals. If it's safe for car paint it should be
alright for your radio. Test it on some area of the paint to be sure.

Speaking of Kenwood Mics, does ANYONE have any idea how to repair that stupid modular, punched on connector that Kenwood so brilliantly chose to use on the mic for the TM-261A and similar VHF rigs?

The silly punched on clear plastic connector looks like something on a throw-away telephone, but no, THEY used it on the $75.00 microphone!

Now of course after a few months of use, mine is falling apart.

Is there some tool to replace that punched on connector or does anyone have any tips on repairing it?

If I have to buy a $75-79 replacement mic for this $199 radio after 6 months I will say "NEVER AGAIN" to Kenmore!

I have a fully operational Wavetec 186 Phase Lock Generator
and a spare for parts for sale or trade. These go in recondition
state by Tucker for $800. It is solid state, and very useful for rx
alignment. Picture available.

I AM LOOKING FOR: boatanchor rx/tx such as HRO 5, HRO50,
Heath Seneca VHF TX for 6 & 2m, GONSET G66/G77 mobile setup or???
Let me know what you have

You know guys, if sellers simply agree to put [eBay] in the subject line than those who do not want to see eBay pointers could simply filter them out. That is assuming they know how to set up filters.

Some people appreciate pointers because they have neither the time nor the inclination to wade through the tons of stuff on eBay. As for the statement re: crooks, my advice is to look at the seller's feedback postings. If it's not good either pass on the item or buy through the escrow service.

I have sold lots of my surplus stuff both via the newsgroups and on eBay. Each has its advantages and disadvantages.

>Non-ham, with two e-mail addresses.

Neither having more than one e-mail address, nor whether or not an individual is an amateur radio operator has absolutely no bearing on whether or not they can be considered an honest person.

I've seen just as many complaints on Usenet about hams welshing on business transactions as I have seen about non-hams.

If the guy put the radios up for auction, then someone would gripe about his Ebay spam. There's just no pleasing some people...

C.K.

The easiest way is to buy a can of contact cleaner or tuner
cleaner, and spray the contacts as you rotate the band switch back and
forth. Your local electronics store or Radio Shack should have it.
While you are at it, don't forget to do the volume pot, etc.

I got one with a 5.5WVDC rating at HSC in Santa Clara, California. I
think I saw them in the Digikey catalog for under $5. It is about 1.5"
in diameter and less than 1" tall.

Source record: 80898

FWIW, I remember an issue of Radio-Electronics magazine from the mid-60's that showed a variety
of capacitors on the cover. One of 'em was a 1 farad 1.5 volt job made by Sangamo. It was maybe
3" in diameter and maybe 6" long.

1647. Re: Kenwood Nuts Revisited

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-06 00:00:00 UTC

You need one to remove the retaining nut from the large round 8 pin mic jacks. On the TS-850S the front cover will come off without the tool (if I remember correctly) but you have to remove the mic jack nut to get the front panel off most of the mobile rigs.

You can use a pair of the bent-type long nose pliers (mine are Xcellite) with fair results, but some are so tight that you have to have the tool.

1650. Eico 717 Electronic Keyer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-06 00:00:00 UTC
From: Pete Ferrand <pete@vermontel.net>
Message-ID: <rqmtgm2lkur18@corp.supernews.com>
Source record: 80902

For sale:

Eico 717 electronic keyer, in excellent condition and works great. Includes both original manuals, warranty and service policy ($5/hour labor!) and even all the tubes are original Eico. Six tubes ought to be enough for any boatanchor enthusiast and it really is a very attractive design.

Workmanship is factory quality. This keyer includes a tone control, headphone jack, internal speaker, tune position, and four range speed control for precise adjustment. Has a large reed relay output providing an advantage over the TO keyer designs - the Eico will work fine in any position, even upside down. Contact ratings are 25VA. Keyer is rated for 3 to 75 wpm.

Sell for $70 bank check or money order plus shipping as needed.

73 es tnx,
-Pete

I know where there are 100 10,000 MFd 50Vdc (1 Farad). We bought them
for a project that was subsequently canceled by the government.
Unfortunately we have to deliver them as residuals.

Quite a pile though. Too big for a desk top usage of any sort.

Contest, Just for fun !
How about making a non-polarized 1F cap out of tin foil and plate glass.
You could probably do this (?) in an elevator shaft of the
Sears Tower, Empire State building, or the Twin Towers.
Anyone care to calculate the height of the cap?
Your assumptions should list the standard width plate glass available
at the local hardware store, and tin foil from you local grocery store.
And lets use 1 foot square elements so that we don't get in the way
of the elevator operations.
Extra Credit: Calculate the equivalent series resistance!
Al

Regarding Radio Shack Cable-
The cable police went to my neighbor's house last week and
threatened them with an ultimatum.
"Either we disconnect you, or rewire your house."
Turns out that my neighbor used RS cable, and it was leaking
terribly. And a two man crew spent a few hours doing the job,
included an amplifier, so the $100 dollar or so charge was not
a profit maker to re-wire 4 sets in addition to the two sets that
the cable co. originally installed. . My neighbor thought that they
were ripping him off, but I think that they were more concerned about
the channel that conflicts with the aircraft emergency frequency.
Why do cable tv providers put a sound carrier on the
aircraft emergency frequency anyway?
Yes, the answer is obvious.

Al

You are right, of course, Chris. I'd have no problem dealing with you, since you put your name right out front, and its in your e-mail address also. Some folks, on the other hand and for whatever reason, prefer to remain nameless.

Your point about hams & non-hams is also a good one. Personally, I like to check the data base in QRZ, etc., and learn something about the person with whom I'm dealing. Sometimes I search Deja News; you can learn a lot about a guy there.

With no name and no ham call and a bounced e-mail address... well its a little hard to know about the seller... even details like his zip code to help guess shipping costs.

On the bright side, I still find that most people are honest, and I have yet to make a bad deal in ham radio. Can't quite say that about a few of my other hobbies & interests.... whats that line about the "Bad Apple" ????

Thanks for the long read.

Wayne, I sure hope you have a solid Oak, steel reinforced desk. One Farad is a mighty lot of capacity, not to mention weight & bulk.

When that capacitor arrives, be sure NOT to put your fingers across the terminals, lest you get a hairdo like Don King.

Let us know how this "paperweight" works out.

Gents:

Just learned this yesterday myself. Capacitors are now available up to 100 (!) Farads. Very low voltage, like 5 or 7 volts working. They use a sulphuric acid electrolyte in contact with the *huge* surface area of a carbon aerogel. For more info, use your search engine to look up "double layer capacitor".

I could send you one, but it wouldn't hold down many papers!
It's dameter is about a quarter, and it's 1/2" high.
(Like an over grown Watch battery!)
1 Farad @ 5.5 volts is NOT a big capacitor any more!

Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Well, it's very interesting...

No-one wants to rent the nut tool, but everyone wants to buy one, so here goes nothing:

(For those who've missed this "lively" thread, please see below for my description)

I know I offered to tell you where to buy the tool, but the guy I get them from doesn't really want to sell them onesy, so I'll act as middle man.

For $34 (money order or cashier's check, no cash please) I'll ship you your very own nut tool, to keep, to cherish, TO SHARE!!! If you don't like it, return it unharmed and I'll refund your money, less freight.

That's the best deal I got, and I ain't gonna get rich on this one, I do it simply to stick-it to the "establishment" that wants to charge upwards of $90 to loosen a nut.

If you're interested you can contact me via mail, email, or phone:

Neil Rosenberg, N1DMA
NeilR@innermedia.com
60 Plain Road
Hollis, NH 03049
(603) 465-2788

The supply is limited, so act soon. Be sure to check with me before sending any money, to make sure I haven't run out!
==========
The fine print:

I have in my posession a tool that is positively brilliant at loosening/removing/tightening those annoying circular "nuts" that you'll find on various Kenwood rigs. Yes, you know the ones I mean, the ones that no amount of coaxing with the tip of a screwdriver will budge. I've been told (but haven't confirmed) that the same nuts are found on many Icom, Yaesu and other rigs.

Why on earth would you want to remove this nut, you ask? Well for most of the affected Kenwood rigs, it's the ONLY way to get to things like digital front panels, lithium batteries, and so on.

You can see a photo of the tool at:

http://www.mv.com/ipusers/innermedia/kenwood/spanner.jpg

Disclaimer:

I make absolutely NO warranty as to the applicability, performance, or safety involved in using the tool I send to you. If you damage your rig, or yourself, that is totally your responsibility. If you void your warranty, that's also your problem. THINK BEFORE YOU ACT!

If the tool is not as I described it, if you chicken out, or if it doesn't fit your rig, contact me, and I'll refund your entire price (less my UPS cost) as soon as the tool is returned to me undamaged. In other words, treat me fairly, and I'll return the same.

Neil, N1DMA

Wayne,

Probably more to your liking would be to find the
largest computer capacitor you can find. With new
dialectric layering technology, you can get TINY
sized caps that are 1 to 50 or more Farads. Car
stereo freaks use them in cars to augment the battery
for the subwoofer system. Tiny ones are used now
almost like batteries in PC boards.

But big, heavy computer capacitors will have the look
you want, the weight you need, and they are really quite
cheap in surplus.

20,000 MFD to 100,000 MFD at 5 volts are BIG capacitors
physically (older ones that is) and cheap and plentiful
in surplus.

Hope this helps.

I was given a very nice Hq145 for my collection. I found a burnt
1/2 watt resistor that I need help identifying. If anyone has a manual
with a pictorial diagram, I would appreciate some help!

The resistor is located at the very front center of the receiver, and
feeds a lug on a coil can in the oscillator section (this can is the
one closest to the front panel.) The resistor is burnt in half, and
carries B+. The first band appears to have been red. Perhaps
a 2.2k or 2.7k?? Help an old boatanchor hear again!!!

1725. FS: Jones Micro Match wattmeter

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-07 00:00:00 UTC
From: Pete Ferrand <pete@vermontel.net>
Message-ID: <rqqnqd75kur24@corp.supernews.com>
Source record: 80870

The Micro Match is a wattmeter built by M.C. Jones Electronics of Bristol, CT. It uses a remote coupling unit and a meter/control unit. This one is the model 263.

A rotary switch selects forward or reflected power levels, full scales for each read 10, 100, or 1000 watts to separate scales on the meter. Impedance is 52 ohms. Frequency coverage is .5 to 225 mcs with adjustable frequency compensation.

A Collins afficionado of my acquaintance says this was the same unit Collins used on its S-line consoles.

This unit has type "N" connectors on the coupling unit. Looks like one could change to UHF or BNC connectors by removing the screws and connecting new connectors if desired.

Looks good and the wattmeter seems to track the Bird and others I have here, although I can't vouch that it's accurate at all powers and frequencies.

For sale as described, no manual, at $50 plus shipping from Plainfield NH 03781 (about five pounds) if required. Your choice of shipper.

tnx es 73

C'mon, you're talking about the star shaped hex wrench, some Swedish and
German cars use them for plates and interior moldings; go to any car
parts store with a good tool selection and pay 8 bucks.

What a racket.

TYPICAL HAM.

Big clean-up this weekend, the skip is in the driveway
and everything must go.

This Collins has been sitting in the garage for many, many years.
Probably won't go, but might make an interesting restoration
project.

If I don't get any takers by Sunday night, it goes in the skip.

Have a look at the picture at the web site I indicated in my message,
and you tell me how that looks like a hex wrench, star shaped or
otherwise. If there was an $8 tool to do the job, don't you think I'd
get one, and forget all this silliness?

You can see the tool at:

http://www.mv.com/ipusers/innermedia/kenwood/spanner.jpg

Hi Folks,

The 7036 has the same pin-outs as the 6BE6, but it's not exactly the same electrically. The 7036 (like the 5915) was designed for computer applications and the "signal grid" (pin 7) has a sharp-cutoff characterstic, not the remote-cutoff characterstic of the 6BE6. The 7036 makes a usefull substitute for the 6BE6 only in circuits that do not apply AVC voltage to the signal grid (pin 7).

There are some available that are made using a different technology than the standard electrolytics. These are acrually quite small. I have some (somewhere) that I think are 2.2F at 5.5 Volts and are rather small (about 1.5 inches dia and 1 inch tall). These have a rather high internal impedance and are useful as CMOS memory backup devices.

A 1 F electrolytic is much larger. I have seen them once in a while at surplus places, if I remember correctly, the size was about 4-5 inches diameter and 8-9 inches long, and I don't remember the voltage rating.

Hit the big capacitor manufacturers web sites and look around.

Yes, but can't you get the front panel off without it?

If so, you can use a regular pair of pliers to remove the retaining nut once the face is off.

Can be seen at:
home.att.net/~nathan-and-staci/radio2.jpg

Comes with mic, and carrying case. Super rugged radio. SecureNet capable.
12 channels. Operates in 403-512mhz range. Strong 5 watts out.

Trade for good dual band 2m mobile rig.. (AKA IC-2100, TM-261a, FT-2500m all
of which are $199 NEW).

Or best offer $$.

1763. CE-100V technical question

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-08 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <7okengknh1@birch.prod.itd.earthlink.net>
Source record: 80746

Just when I think I'm done with this transmitter, one last problem crops up. While operating CW with it last evening for the first time, I noted a bit of a click, but the keying sounded a bit softer than it should - a funny combination. I put a scope on the dummy load today and looked at the waveform of a string of dots. Sure enough, there's a 1 ms. spike at the start of every dot, but the waveform is taking about 5 ms. to rise to full output, thus explaining what I heard.

I next replaced the 100V with my Yaesu FT-980 and looked at the output waveform again. About 2 ms risetime and no spike, of course. One odd thing I did notice however was that the duration of output from a dot was nearly half as long on the Yaesu as on the 100V. All this seems to point to the time constant of the 100V bias line in the 100V, although that doesn't explain the spike I'm seeing. Any ideas on what to look for here? I don't recall hearing this type of problem with the 100V that I owned about 13 years ago.

I swapped different tubes into the RF stages, but observed no difference either in the spike, slow rise time, or the elongated dot.

Source record: 80754

Scam Notice
If you have been approached by a guy in Largo, Florida who has a long, impressive, list of WW-II military radio equipment to sell, STOP ANY FURTHER NEGOTIATIONS!! THIS EQUIPMENT DOES NOT EXIST!

A "Mike Kirby" has already sold this very same list of equipment to at least three different people, and most likely more. At this time legal
action is being taken by several. If you have been related a story of an estate collection that includes a brother-in-law/truck driver that will deliver said equipment, and sob story about a recent move, no permanent address or home phone number, and given a fax number of a Florida hotel as a contact, and would accept 1/2 payment as a deposit. This is the same guy.

Mr. Kirby has been operating out of this hotel in Florida
for some time. Evidence is being gathered at this
time for impending legal action against him.
It would appear that most of his victims have been those who
had advertisements in various publications for wanted equipment. The scam
may have not been limited to only military type radio equipment, but may have also include other types of a rare nature.

If you have any evidence and/or information concerning this case, please forward it to military-radio-guy@juno.com

WANTED:

I will pay $100 or more (depending on condition)
plus shipping for a BC-942 Receiver in
unmodified condition. I will also negotiate trades.
This receiver, made by Western Electric, looks just like the
common AN/ARC-5 R-28 VHF receiver but has a Signal Corps U.S. Army
nomenclature plate showing BC-942.

I will also pay or trade well for the following
"ARC-5" type command sets:

Western Electric BC-699 transmitter (looks like a T-23).
AN/ARC-5 R-112 Receiver
AN/ARC-5 R-113 Receiver
AN/ARC-5 T-89 Transmitter
AN/ARC-5 T-90 Transmitter
Any radio, rack, part, dynamotor or accessory marked
for set RAT, RAT-1 or RAV.
BC-455 with English modification for 28-41 MC.
Any AN/ARC-5 unit with "X" appended
to its nomenclature (i.e. AN/ARC-5 R-26X)
Crystal Frequency Meter O-4/ARC-5.
Any unit factory-marked in Cyrillic.

Brain dead today, this should be a Hammarlund SP 600 JX 23, not a 650.

sorry!

Sorrt if this is the wrong newsgroup to post this in, but this item could be considered boatanchor related...
WWII-era single cylinder 2 stroke Auxilliary Power Unit (APU), poor condition. Some engine parts missing, such as the carburetor. It is doubtful the motor could be made to run again, at least not without some very major repairs. Was manufactured by Homelite.

Item can be seen at:
http://home.att.net/~vegetable.man/APU_1.jpg
http://home.att.net/~vegetable.man/APU_1.jpg
http://home.att.net/~vegetable.man/APU_1.jpg

This item is too heavy to ship, you will have to pick it up in person. We're about 20 miles east of Los Angeles.

If you are interested, please email me at:
rodger.eSPAM_SUCKS@worldnet.att.net

I paid $450 for a similar radio about a month ago. The problem will be, the parts are worth more than the radio alone.

The PTO is $100, the cabinet is $100. The knob (if finger hole) $75 etc.
So if you sell it too cheap, it may end up as a parts radio.

FOUNDATION FOR AMATEUR RADIO
c/o Al Brown
8645 TOWER DRIVE
LAUREL, MD 20723-1244

-- For immediate release --

F.A.R.FEST '99 AT NEW LOCATION

The Foundation for Amateur Radio (FAR) will sponsor the 42nd annual F.A.R.Fest amateur radio hamfest on Sunday, September 26, 1999, at Prince George's Stadium 1/4 mile south of the junction of US-50 on US-301 in Bowie, Maryland between Washington, DC and Annapolis, Maryland.

This is a new location for F.A.R.Fest, with a paved area that accommodates over 700 tailgaters. Vendors and other sellers will be able to set up under the canopy of the stadium concourse. General admission tickets into F.A.R.Fest '99 are $5.00 at the gate; $10.00 for tailgating, which requires the purchase of general admission. Vendors and other exhibitors should contact Marry Morris, N4TCI at amateur_radio@hotmail.com, or at 703-971-3905 for more information.

The Special Events station W3PRL-AM will be on display.

Talk-in frequencies are 146.520 MHz and 147.105(+) MHz.

To get to F.A.R.Fest '99:

From points North:
Take I-95 south to the Baltimore Beltway (I-695) to Exit 4 (I-97 South) toward Annapolis. On I-97 South, take Exit 7 (Route 3 South - Bowie/Odenton). Take Route 3 for approximately 11 miles. After passing under the Route 50 overpass, proceed to second traffic light and turn left into Stadium Drive. NOTE: Route 3 changes to Route 301 after you pass under Route 50.

From points South:
Take I-95 North to Exit 104 (Route 301 North). Take 301 North past Upper Marlboro. Go through the traffic light at the Route 197 intersection (Rip's Country Inn will be on the right). At the next traffic light, turn right into Stadium Drive.

From points East:
Take Route 50 West to Exit 13A (Route 301 South). At the second traffic light, turn left into Stadium Drive.

From points West:
From I-70 East, follow directions coming from points North.

From Washington, D.C. or the Capital Beltway:
From D.C., take New York Avenue to Route 50 East, or the Capital Beltway, Exit 19A (Route 50 East). Take Route 50 to Exit 11 (Route 197). Go South on Route 197 for approximately 1.5 miles to Route 301. Turn left onto Route 301 and remain in the right lane. Turn right at first traffic light into Stadium Drive.

For general information on F.A.R.Fest '99, see the webpage at URL:

http://www.amateurradio-far.org/

or contact Al Brown, KZ3AB, at ﷺamateur_radio@hotmail.com,ﷺ or at 301-490-3188.

John - unless originality is a prime goal here (and it sounds like the rest of the radio is kind of a rat anyway) any "universal" audio transformer will work, primary about 3K. Then you aren't held to the ridiculous 3.2 ohms that Hallicrafters chose. Just finished one of these up using a no-name replacement out of a 5-tube radio and it fit perfectly, looked almost orignal, and worked FB.

From: radiomuseum@webtv.net
Message-ID: <1164-37AD91DF-7@newsd-151.iap.bryant.webtv.net>
Source record: 80889

I'm looking for the audio interstage transformer for a NC-100 or 100X.
The xmfr in my NC-100X was removed sometime in the past and circuit mods
installed in place of an xmfr. I would like to get the rcvr's circuitry
back in original condition. The orig. xmfr mounts on the top side of the
chassis and appears (in Rider's photos) to be inside in a housing that
looks like the IF xmfrs, (square can, aluminum? w/ NC on top.)
Unfortunately, National dropped the interstage xmfr coupling on the
NC-100A models and all subsequent models. It seems only a NC-100 will
have the xmfr that looks like an IF can. Any parts chassis' out there?
Probably not, but if you can help, that would be great.

Mr. Kirby has been pulling similar frauds for years. In 1990, I
responded to an ad he placed which offered to sell a piece of Heathkit
gear. The money was sent and no equipment arrived. Only action by
postal inspectors in Florida got my money back.

That's great Matthew, and people should definitely try the simple approaches first. One's that I've tried are:

1. Using a single pointed instrument, like a small screwdriver, see if you can gently tap the nut loose (by pushing in a counter-clockwise direction on the nut). By occasionally switching to different slots, you can possibly just work it out slowly.

2. If this is not successful, do as Matthew has suggested, simply take some flat stock (or a fork) and make a custom-shaped two-toothed thing that you can turn with your hand. This can most easily be done with a file or grinding wheel and some flat steel stock, approx .030 to .050 inches thick. In my case all this yielded was a bent tool, since Kenwood had really torqued the nut on.

3. If this is not strong enough, you can move to the next level, a needle nose plier. The best method I've found is to use a very small c-clamp on the sides of the pliers to help strengthen the plier's hinge point. First spread the pliers to fit two of the slots, and to clear the microphone connector housing, and tighten the clamp really tight. If you're very careful, you can apply quite a bit of torque this way, but if you slip (as I did) you'll probably gouge the front panel of your radio.

4. If, incredibly, this still is not strong enough, or you don't want to risk hurting the front panel, then you need to bring in a tool such as the one I've found.

Here's a follow-up to the scam alert I relayed a couple of
days ago. This contains contact numbers should you be one
of this guy's victims.

I don't have any further information at this time.
73 Dave

SCAM ALERTS;
As a result of last Saturday's emergency "Scam Alert", several
responses were received ....
The subject of that message was a Mike Kirby, operating
out of a P.O. Box in Panama City Florida. Kirby was prosecuted
for this very same activity in 1991 and an in-depth article
was published in "Antique Radio Classified"...
(see Feb. 1991, pg 21, ARC).
He operates by selecting want adds from various radio related
publications, then offering much sought after equipment at a reasonable
price. He accepts 1/2 payment up front, with the further incentive of
free delivery by his brother-in-law who is a supposed independent truck
driver. Needless to say, neither the equipment,
nor the brother-in-law exist.

So far, he has targeted persons advertising in QST,
Antique Radio Classified, Electric Radio, and Amateur Radio Trader.
Currently Kirby is again being investigated by both the U.S. Postal
Service, and the Bay County Fl. Police. The evidence so far against him
is mounting, but more is sought. If you too have suffered at his hands,
or can offer additional information, contact Detective Robert Luther of
the Bay County FL Intelligence Division at the following phone numbers:
850-872-3129 ext 3129, or fax 850-747-5914. As Kirby is also guilty of
mail fraud, and interstate & international wire fraud, it would also be
a good idea to file a complaint with your local Post Master and FBI
office(indicate to both that other investigations are currently in
progress and give them Detective Luther's number),
and the publishers of the magazines that promped
Kirby to contact you.

As investigations are currently underway,
it would NOT be a good idea at this time to confront Kirby yourself!

Here are some responses to the scam alert posting.
I am simply relaying information received as requested.
I do not have any personal knowledge as to

the accuracy of any of these allegations and
cannot myself make them.
I suggest and request that you use
your own judgement in each case.
D.S.

Also as a result of the Saturday "Scam Alert" Message, several
other complaints were received about persons operating similar scams, or
questionable activities. All of them have been reported before, so I
feel
they warranted including here.

#1, say, there's another guy who advertizes a "List of WW2 radio
equipment"
and has offered this list for 2 years now. I just saw it still
advertised
in Ham Radio Classifieds. This is not on the same level, i wouldn't
really
call it a scam except your money for this list is wasted, the list has
some home radios and junk and not anything you would want! I don't
understand the payoff for this guy and why he continues to list the same
junk month after month.

#2, There is a person named Bob Van Dyke,in East Quoge,NewYork,out on
Long Island.He deals mosly with entertainment type antiques, and
although
his
tactics are perhaps barely legal,he is one of the most hated people in
these parts when it comes to antique radio.He does
deal in surplus when it
comes around, so some of us could be victims.I told him that he is never
allowed to come on my property or communicate with me in any way.His
tactics are mostly lieing about the completeness or condition of
equipment,and drawing you into a deal of "bait and switch".

#3, The below company has been reported here before with their
outlandish
claims, ridiculous prices, and non-existent equipment for sale, I'm
informed that there is now a Federal Task Force who's sole purpose is to
investigate internet fraud. Perhaps it's time to blow the whistle on
these people too!!! Anybody know how?

I WONDER IF HE IS RELATED TO LESTER KALTENECKER,
THE GUY SCAMMING PEOPLE WITH PRC-77.

Another "bad guy" is Les Kaltenecker. He runs "American Military":
http://www.ammil.com/ (of Orlando, Florida).
The site which offers: "PRC-6, better than new!"
He seems to have a great stock; so I ordered some rare exotic military
stuff.
If You order he immediately charges Your credit card and nothing
happens!

I lost about 670 USD 2 years ago.
I don't know how to react from Europe!
Your "desperate -----"
BE AWARE!

One drawback to the cheap methods I've tried is that, especially with the mobile rigs, it's very easy to have the pliers or screwdriver slip and scratch the front panel.

Try the fork deal at your own risk, but remember, it's always easier to get forgiveness than it is to get permission.

I've done it both ways. The tool is awfully nice.

You'll need a crimp tool that will handle 8 conductor RJ-45 plugs. These are the same ones used on Ethernet patch cords and ISDN modems. The Radio Shack crimp tool will only do 4 conductor RJ-11 plugs (unless they've changed it recently).

We've had MUCH better luck with the modular plugs than we ever did with the round ones, though you'd never believe it by looking at one.

Good luck,

-Matthew Williamson, N5VQT

Was going to trade for 10 meter radio but can't find the radio I would trade for. All kinds of offers to trade for RS htx-100's. I wonder why everyone wants to unload their htx? Anyway, i've decided to sell the FRG-7 for cash instead. What I want for it is $200.00 US "firm" no dickering. US money order only, you pay shipping. Sorry no cheques.

I have original manual for receiver. This frog is almost mint. As stated on my previous post there is one light bulb out. Works and looks great.

email direct if interested.

Jeff

Whatever the seller asks for it.
It's his, and he is entitled to
get what HE considers a fair price.

The same holds true in a grocery
store or McDonalds. And you are
free to compare prices and go
shopping someplace else.

Source record: 80802
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Greetings.... I am wondering if there is anyone out there that is familiar (intimately??) with a Clipperton-L and problems with parasitics etc etc etc... I have tried to read some of the threads on the users groups that have to do with this problem and ones like it but they keep going off on so many tangents that it's hard to keep track of what is trying to be said. Everyone has their own opinions as to what causes parasitics and how to remedy them... My problem is that back several years ago my bandswitch zorched due to what I think was a parasitic. I rebuilt it, installed it after replacing all four suppressors on the tubes (two were cracked...another indicator). During the time it took me to remove the switch and then repair/replace it (two years) I lost the notes I had taken that showed where all the connecting wires went to on the switch from the various tap points on the tank coils . I was able to figure out where they went using the schematics (actually about 95% sure). Now I only get output on 160 mtrs. One thing that I think is telling me that I am still dealing with parasitics is that as I sweep the tuning and loading controls through their range without drive, I see the plate current meter peak. Also I'm not sure if I'm also dealing with bad output tubes. If I seem to be getting good power out on 160, wouldn't that tell me that my tubes are good??? or do they lose something even going up to the next band (75mtrs), Should I just junk this amp and spend my time and money on another amp. I guess I just feel like I'm spinning my wheels at this point. Can this amp be made to work reliably and well without spending hundreds of dollars. Heck for that kind of money I'm almost halfway to a used AL 80 or L4-b. At least they seem to have a decent track record... Or, I have 99% of the parts to build a 4-1000 rig... A project I've put off for years but maybe with winter coming, it's not starting to look that bad..... and I can heat my house with it!!!!
Any Help would be appreciated.....
73 Tim KB1MM

I was bilked out of $60.00 for a Uniden PC-122 CB set. They will take your money and tell you the item has been shipped. I was given a phoney UPS Tracking Number.

If you don't believe me, go to www.DejaNews.com, and do a search on the e-mail address <tnc@connection.com>

He also apparently frauded another ham out of some money. The other gentleman is a Mo. State Trooper.

It is people like this who give EVERYONE a bad name!!!!!!!!

I'd put $1000 on it for starters. Some dazed collector just might
pay that much for it. You can always come down. You should see
the prices people are paying for Collins equipment. WOW!! I
almost cannot wait to sell my Collins stuff... Good luck OM.

Source record: 80810

Hi Tom,

I'd say a touch high, but not outlandishly so.

I paid ~$125 for mine last fall in ~#8 condx along with a R-50 spkr @ $50, found on web. That price would also include manaual or copy, otherwise -$15.

Think rust might scare folks away. Also, folks at swapmeets are looking for deals, and point of pride to drive even fair prices down.

Remember, that the '130 is single conversion, & really a pretty mediocre RX. SX-100s can be found at swapmeets for not much more.

73 es gud luck selling it,

Paul D. Chapman W6PDC (SX-99, 130, ... owner)

Hi Floyd,
I don't recall who wrote this or in which forum I got it off of,
but I hope it helps:

Couple of RFCs and/or a small inductor, a condenser or two and
resistor, and key clicks will go right away. If nothing more, stuff a
0.01mF condenser across the key; it'll knock out about 60% of 'em,
minimum. For more fixes, see *any* radio handbook worthy of the name from
oh, 1935 though '70. Basic idea is series L, shunt C, and maybe a little
series RC network right across the key.

Dachis, in Radios by Hallicrafters lists the S-20R at $60 to $90. My experience is that most desireable Hcrafters are going for somewhat more than the prices in my 96 edition.

I have over 300 pieces of vintage radios for sale. I am in Redding,Ca. and would love NOT to have to ship alot of it.If you live within driving distance,you might want to come and see it all. I have about 60+ pieces of Hallicrafters (no 115's or 88's),50+ Hammurland,50+,National,20+ Johnson encluding a desk KW,80+ on misc.rigs,tubes,some parts,Collins R388,40+ speakers,etc. Please DO NOT EMAIL ME FOR A COMPLETE LIST. You can call me at (530)241-0843 if interested and I can go through it with you.All emails for "do you have this do you have that" will NOT be answered. I only type about 10 wpm and it would take me too long to put out the list to every one who ask. Prices are good and I will cut a better deal for those who buy multi items.

Message-ID: <rr10ojs2krl77@corp.supernews.com>
Source record: 80830

I have a dandy mate to your 75A-4 receiver. A real good lookin' unit.
The fronts are excellent. There are some marks on the top , but not any
dents or anything a steady hand could touch up easily. It has the 4:1
vernier knob, the 4X250B finals, and probably all the other mods that 44
years of ownership can complete! A plug is cracked that goes into the rear
of the upper (RF) unit and it needs a plastic elbow where the forced air
enters. The unit worked prior to being taken out of service. The
interior is also very clean. Its clear that no mice lived in this one. I
have priced it to allow for someone to fix up these minor needs. I will not
reduce the price any more. I have seen these go for $4000 or more. This
one is $2000. The buyer will of course pay the shipping costs from here.
I do have shipping cartons that are excellent for United States shipping.
If it is to go overseas I can arrange crating. US shipping weight totals
about 200#. Good thing your hobby isn't collecting armored cars!
If you have any questions, I'll try to answer them. Its ser. No. 585.
KWS-1 were made from sometime in 1955 thru 1958. I estimate this one was
made sometime during 1956.
Thanks for reading this. Ben Piller, K9CSM near Denver.

Hello Everyone,

I am trying to finish up an SCR-299-D restoration and need the
above mentioned mountings for the LS-3's and BC-312/342's. It would
also
be great if I could find a JB-69-A Electrical junction box that goes
on the left hand leg of table MC-269-A which I have.

Also need to know if there is still a source for old
"Hubble" brand electrical plugs. The MC-269 has an electrical raceway
that has beautiful porcelain twist lock receptacles, but they are
two pin jobs rated at 20 and 30 amps. I have crawled through every
"creaky wooden floored hardware store" within a 100 mi. radius of
Cleveland and cant find any NOS.

I am also starting to round up some final pieces for an SCR-499
(same as an SCR-399 without the shelter) and would like to find a
JB-70-A
and chest CH-120-A. I have found a source for the correct hardware to
reproduce the CH-120-A and am prepared to do so but sure would like to
"eyeball" one first.

TIA

Message-ID: <rr46kc73krl49@corp.supernews.com>
Source record: 80644

Connect an *insulated* wire at least 10 feet long (the length and wire type are not critical) to one terminal. The antenna wire does not have to go outside or near a window unless you are buried in a modern building with lots of steel and interfering electrical devices. In my house, a 20-odd foot wire stretched around the upstairs bedroom gives reasonable shortwave reception.

If there are only two terminals, one would typically be the antenna, maybe labeled ANT or A1, and the other the ground, maybe labeled GND. If there are no labels on the antenna terminals, try the one on the left first (left as you are facing the back of the radio). If there are two antenna terminals and one ground, use the leftmost or A1 terminal.

To test whether it works at all, switch the bandswitch to the lowest (A) band, which is standard broadcast band from about 550-1600 khz. Turn the Sensitivity knob all the way to the right. Flip the Standby/Receive switch to Receive. Flip the CW/AM switch to AM. The settings of the Noise Limiter and Tone switches shouldn't matter.

Turn the tuning knob in the vicinity of a strong local AM station. You should hear something with the volume control turned partway up.

You may or may not hear stations on the other bands, depending on when you listen. Unlike commercial AM radio, shortwave radio stations do not broadcast 24 hours a day. They come and go at various times. And certain frequencies are more active during certain times of the day or night. In North America, after suppertime, even a poorly working shortwave radio with a short antenna should pick up some of the stronger broadcasters between 6mhz and 12 mhz.

Jeff, there is a company in Edgerton, OH called Oren Elliot products, they were originally called All Star Products and made a plethora of variable caps for Heathkit, any cap with the stamp ASP was made at thier facility. They are still in business as far as I know, I stopped by there about a year ago, it was an orgasmic experience in variable caps, thousands of them all over the shop. I have no idea if they sell individual pieces but they might be worth calling. Sorry no number.

What WOULD be EXTREMELY helpful, is to pick a random number of items
from each maker, and list condition/price.

SOME folks make these types of goods available at pretty reasonable
cost - OTHERS consider them to be gold - and THOSE may not even be
worth the price of the phone call...

I live in Vacaville, not TOO far from you, love old BA stuff, would
LOVE to see yours if I really had reason to suspect it is decent stuff
at decent prices...

Can you provide samples?

1892. TEK scope info needed...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-11 00:00:00 UTC
From: caschwark@aol.comnixit
Message-ID: <19990810210019.07903.00000226@ng-bk1.aol.com>
Source record: 80697

I just picked up a 5000 series scope at Radiofest in Elgin last week. The base frame is a model 5110 with three plug-ins - all working:

5A21N - Differential Amp
5A23N - Amp (Sinple input)
5810 - Time-Base/Amp

What I'd like to know are the specs available (or do you know) what the bandwidths are on the 5A21 and 5A23? I'm primarily using the scope for antique radio restoration. I would also like to know where I could get the service manual for the frame and the individual plug-ins.

I've been using TEK scopes for the past 25 years and really appreciate their quality and "staying power". I still use a 465B w/DMM at work - www.corplextv.com

I've checked with my local TEK sales rep to see what he could dig up, but I think this 12-15 year old gear will be out of his "league".

Any help or leads appreciated.

Still have stuff to almost give away. Here in Oradell NJ, exit 165
off the Garden State Parkway. Then head 2 miles east. Call me
at 201-261-4066 so I can be around to expect you, and give you the
exact address.

HP VTVM model 400D
General radio frequency meter and discriminiter 1142A
Eico audio signal genmerator model 377
Eico VTVM model 232
Ballantine labs "sensitive inverter"
Link radio corp frequency meter model 2051b
2 boxes of microvave waveguides
PRD klystron power supply model 809a
Bell and Howell schools vom

And some more stuff, including speakers and horns.

Perfer pickup but if you're willing to spring for "Mailboxes Etc"
rates, will ship, buyer pays it.

All stuff as is, probably works but I don't have time to test,
figure on restoring it. Everything is complete and in good shape,
no rust.

There must have been quite a bit of QSB on that clip, Joe.

The USPS, through a couple of commercial vendors, will sell postage
stamps over the internet; the stamp is printed out on your envelope
via a printer connected to your home PC.

What you imagined you heard (digital stamp for email) would have to be
approved by Congress.

I HAVE A NIR/-10 NOISE REDUCTION IN NEW CONDITION
LOOKS UNUSED HAS ORIGINAL INVOICE PAID $330 \
UNIT IS GUARANTEED WILL SHIP FOR $185 MANUAL MY CALL IS W2FNT AND
LOCATED IN LINDEN N J 97936
INCLUDED AND ORIGINAL BOX PLEASE ADVISE JOHNYK78

1902. Re: Looking for old CQ or QST article on 100V

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-11 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <7orquafmp1@oak.prod.itd.earthlink.net>
Source record: 80707

Sorry, but in this case, not that simple. The 100V keys a number of stages
and the "click" or spike is coming from one specific stage, the first mixer.
The article I'm looking for deals with how to modify that stage to eliminate
or reduce the spike that occurs when the stage turns "on". This is a design
defect, and occurs only on 15, 40, and 80 and not on 10 and 20 where the
signal does not pass through the first mixer.

From: "J.Parry" <iss00f@bangor.ac.uk>
Message-ID: <37B17B9C.DDA3633E@bangor.ac.uk>
Source record: 80712

Hi,

Apologies if some of you feel that this mail should not have been posted to this newsgroup but
the 761 is a bit of a boatanchor...

I wonder if there's anyone out there who could possibly provide me with some technical info.
on this rig ? Like for example what the IC should be on SSB with no AF input, mine seems to
show about 3 amps which strikes me as being high. I've re-set the idling current for the driver
transistors and the output transistors as per the ICOM workshop manual. The rig also gets quite
hot quite quickly and the fan cuts in very early in a qso.

I've a few other technical questions but just in case there's no reply...

Oh and I've just acquired an SP 600 - now that must rate as a boatanchor and I'll have some queries
on that one later.

Hello,

This radio is the rack mount version with no desk cabinet. It originally lived in India for many years and is now in CANADA.

In excellent cosmetic (8 of 10) and electrical (10) condition with a photocopied manual from Austria!

Only mod is temporary attachment of line cord as I couldn't get a matching female connector.

Asking US $700 OBO or will swap for interesting xceiver.

Email if interested and I will send several JPEG's.

Have for sale:
2 units in like new condition and are identical

Compaq model Deskpro 5100
Intel Pentium 100 - 100mhz processor - up-gradeable to Pent 166
16mb of D-Ram - uses 72 pin ram - upgradeable
850mb IDE hard drive by Quantum
8X SCSI CD-Rom Drive
3-1/2"-1.44mb Floppy drive
Sound Blaster compatible sound card
1-open bay for Tape drive or ??
1mb on board SVGA video
2-serial ports
1-printer port
1-bus mouse/ps2 style port
2-open (un-used) ISA/16bit slots
1-open (un-used) 32 bit PCI slot
Keyboard an Mouse
Win 95b installed
This is the late version of the Deskpro 5100 series computers which
Compaq produced before going to the 6100 series. They are extremely good
for RF tight applications and do quiet on the HF bands. I am using one
in my own station. All metal case with finger stock around connectors.
Both units are in excellent condition and look as new. No scratches or
dings.
Price - $190.00 with 14" SVGA monitor - $215.00
with 17" .24dp SVGA color monitor - $315.00
Plus shipping Continetal US.
Thanks for reading and 73 de Dave K4DLJ Darlington, SC

Source record: 80719

I need to test the reception capabilities of an old Hallicrafters
S-53 radio. It has two "screw terminals" for attaching an antenna.
Can someone tell me the best way to attach a "quick and easy" type of
antenna to these terminals? Can I just loop some uninsulated wire
around both posts and stretch the wire out to a window???
I'm not looking for a great DX antenna this way...just something fast
that will give me some decent idea of the radio's reception.
Thanks!!

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday August 15th 1999
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

>capacitors?

I've had good luck with the "orange drop" capacitors sold at Antique Electronic Supply (http://www.tubesandmore.com is the URL). They seem to be as good as the original Sprague capacitors, which are getting quite hard to find now. Have recapped several receivers with the SBE units (including my SX-71).

Hi folks,

Looking for a very-good-shape Kenwood R820 receiver
(companion rcvr to the TS820 receiver). Always
wanted one....

Minor nicks/scratches on case/paint are OK, and I
can figure out how to fix 'em up, but front panel
should be pristine - unscratched, all legends
intact, all knobs, etc.

- Please don't direct me to an E-Bay auction
as I do not business with them.

- Please reply to wiese@jps.net

Thanks!

I understand that to be true, but no longer subscribe. Folks from the Boatanchor listserv provided me with scans of the article within two hours and I had the problem solved a couple of hours later. I believe that the ARRL folks will mail you the articles you request.

Source record: 80735

For Sale - I'm running out of room:
Hallicrafters S-38E receiver, working, all original knobs (no chipped edges), the word "speaker" on front panel is worn off (but easy to replace), $50 + shipping.

Hallicrafters S-41G Skyrider Jr. receiver, working, some light rust on cabinet top, all original knobs & switches, good photocopy of manual, $50 + shipping

Hammarlund Super-Pro SP-210LX receiver, working great, with manual, 5 bands: 100-200 kHz, 200-400 kHz; 2.5-5, 5-10, 10-20 MHz, has professional-looking internal power supply to replace original separate supply, the original cabinet is replaced by a newer steel cabinet in good condition, original knobs, front panel repainted light blue, $200 pick up only in Pacific Northwest.

Heathkit GC-1A Mohican receiver, good overall physical condition, but not working; could be restored or used for parts - all original knobs, good face & dial, whip antenna, some scratches on cabinet, dials need restringing, missing trim ring for whip antenna, original manual, $40 + shipping

1933. Re: Digital postage stamps?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-11 00:00:00 UTC
From: hlritter@aol.com
Message-ID: <19990811190629.09035.00000254@ng-fi1.aol.com>
Source record: 80738

No, there was no QSB. The 'digital postage stamp' story was as reported by Joe, but is a hoax.

The US Postal Service even went public denying the report, pointing out that it has no authority over anything but the services it offers and the mail that it carries.

Turn off your TV earlier.

>I am in need of simple RF ammeter circuit. Will have to build two
>identical - one for each of the tunes lines. Any ideas would be most
>welcome. Thanks.

Bill,

Here are two ideas:

1) (I haven't tried this) - Make a "current transformer" using a ferrite core. Wind a few turns of fine wire on the code, then pass the wire to be measured through the core. No direct connection - it's all magnetic. The fine wire winding is connected across a resistor and diode, and the resulting DC measured with a DC voltmeter.

2) (I have used this for years) - If you can't find a thermocouple or hotwire RF ammeter, just use dial or flashlight bulbs. The best are #47 or #49, but others will work. If the line current is low, just put the bulbs in series, one in each side of the line. If the line current is too high for that, attach short wires and alligator clips to the bulbs, and tap them across a few inches of the line, like this:

---------- <wire with RF to be measured
^----------bulb----------^

Both setups should be as identical as possible. The further apart the tap points are, the more sensitive the system is. If one bulb is brighter than the other, you've got unbalance. However, if both bulbs are the same brightness, you can still have common mode currents.

The bulbs are cheap and give a real visual indication of RF. Just tune for maximum brightness without exceeding the ratings of your final tube. Visitors who know a little electricity are always startled to see a bulb connected across a short piece of wire lighting up!

I have one that has been refinished and looks like new. Works great.
I have jpgs if you like to see it. Cabinet has been professionally
restored and looks brand new. Front panel 9.5+ all original knobs.
I also have a complete spare in working condition minus a couple knobs.
I want $225 for one and $100 for the other plus shipping.

1964. Cam alignment of RF assy for R-388? HELP

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-12 00:00:00 UTC
From: orion <orion@otenet.gr>
Message-ID: <7ourqn$m6r$1@newssrv.otenet.gr>
Source record: 80671

Hello all, once more I would like some of your valuable help upon the restoration of a nice boatanchor that consumes most of my free time the last 2 months.

Can anyone direct me on the alignment of the RF tuner assembly and specifically on the position of cams on a COLLINS R-388?
I am restoring a R-388 and I am almost done but i suspect that the previous owner(military) has messed up with the 3 cams of the rf tuner assembly and possibly the cam of the IF rack too.
So i would be more than thankfull if somebody got a copy or a scan of the relative section of the R388 Collins instruction book or any other practical way of doing that alignment. (I got my hands on a similar book for 51j4 but seems to be alot different as there are no allingnment holes available on the R388 in contrast with 51j4). Furthermore according to that book the current settings are completely incorect as also evident from the difference in sensitivity of the various bands as well as between the end points of most of the bands.

Thank you in advance for any information concerning the above matter as well as taking the time to read my long post.

Best Regards

Panos

There actually should be three terminals: A1, A2 and Ground. For a
quick test, such as you are describing, A2 should be shorted to the
Ground terminal. A random length of wire is then connected to A1.
The length is relatively unimportant and 25-50 feet, or perhaps even
less, should be sufficient to determine whether the radio is working
as it should. Good luck with your S-53A.

For Sale: Hallicrafters SX-122 receiver. (General Coverage w/ seperate ham band dial system) Front panel near perfect (one scratch on the metal trim). Knob inserts great, cabinet paint very nice with some tiny chipping along the rear edge. Electrically the unit is in nice condition and works as well as any Hallicrafters based on the SX-100 type design. Includes crystal calibrator. Internally the radio is about average with some chassis crud although not rusted. Under chassis is very nice. Can send JPEGs if desired.

$250 plus UPS on about 30 lbs from 95827 I will pick up the versapack fee.

tnx for the read.

1980. Finding Hope in a Tube Pile

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-12 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <37B350D9.28300454@ix.netcom.com>
Source record: 80687

(True story- happened yesterday.)

It's hot in Texas. But I had to have some place to sort
through all those 12AX7s and 6BA6s and 1619s.
My darling Kay is a wise and sensible woman,
so the tables in the house are forbidden to dirty tube sorters.
I waited until the sun had gone behind the tree line
and set up a table in my driveway to rummage around in
yet another mixed tube lot.

Normally, solicitors get little more then a friendly
"No thank you. Good bye." from me, but the young girl
who walked up to me had a charming smile. She was about 20-
thin as a preacher's wallet, pretty as your first born
with flowing raven hair.
And a clipboard with "Greenpeace" stickers on it...
uh oh....

"Hi! Can I talk to you for a minute?" she chimed.
"Depends," I cheerfully grumped. "What are you selling?"
"Nothing! Nothing at all" (that's when I spotted the
"Won't you save the Earth from CERTAIN DOOM?!?" clipboard stuff).
"Environment?" I said, good-naturedly; "I'm a believer in
Better Living through Chemistry. Nuclear Power in every home.
Save the Whales-- for dinner." She smiled, getting the joke
and knew we weren't going to do any business, so she looked
at the pile of tubes-

"What are those things?"
"These are vacuum tubes. They used them in radios and TVs
before you were born."
"You mean like those big old computers that used to take up
whole walls-- those things they used in them?"
"Yes; same kind of things, except these came out of radios."
"Wow... I've heard of them, but I've never actually SEEN any.
Don't they, like, light up with fire inside or something?"
"Yep. They sure do."
"That's pretty cool," she said, with some
real wonder in her voice.
After another moment- "Well, gotta get back to work. Bye!"

"Take care," I said, watching that fresh young person-
so full of potential and idealism- who was supposed to be
jaded by 150 mindless channels of cable TV and death metal music.
I was glad to find a little bit of awe and wonder still
in her somewhere. Gives me hope.

Source record: 80603
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Hi.... I am in the process of putting together a bunch of stuff that I've had kicking around here together to make a 4-1000 amp... I have at least a dozen schematics for GG amps but almost nothing for Cathode grid driven amps using the 4-1000. The only real drawback that I've seen so far is that it requires a slightly more complicateed power supply (screen voltage and the like) but I already have the stuff to incorporate that into it. The main advantage that I can see for this amp is that it takes very little drive to send a 2500 watt bird slug into oblivion (or at least to cause the needle in the meter housing this slug to gently tap the right hand stop pin). I can imagine, though maybe not rightly, that this amp may be a little more difficult to tame, parasitically speaking, but then I plan to swamp the heck out of the input grid circuit to knock down the input drive to a level that won't cause the tube to exceed the plate dissipation rating....in my way of thinking this would seem to knock down a "possible parasitic" enough to where it would never get started... where is Rich Measures when you need him...anyway, any info would be helpful I'm looking to start this project in the next 1-2 months....

You seem to have an attitude problem.. You want someone to send
you $2000.xx for a bunch of halicrafters radio,s and you do not even
say how many are dead or alive. For all anybody knows, these could
have been pulled from the "junk pile" at the last hamfest you
attended.. BE MORE SPECIFIC.

Bob

Looking for an Atatic "G" stand in excellent condition - actually, what I really need is just the base (paint is flaking badly on mine) the chrome handle, cord, etc. on mine are in fine shape - if you've got something laying around, e-mail me with price and specifics. I'd be interested in either the wrinkle finish or smooth finish - doesn't really matter.

Alternatively, if you know of a good "hammertone" type paint that I could use to refinish the base on mine, tell me about it!

He told you:

> >...Cond.on the radio's are from parts rigs to very good/ex.

I drove to Redding yesterday, and bought one radio from him at a very
fair price. The price reflected the fact that it wasn't tested.
I would have bought several more, if I had the money available.

Imagine a storage unit FULL of boatanchors, Hallicrafters, National,
Hammarlund, and ones I'd never seen before in my 49 years as a
ham, like Breting and Meissner and Patterson. And this is just the
recievers!

Give him a call. He's friendly, and his descriptions when I talked
to him on the phone turned out to be accurate when I got there.

2031. Drake TR-7 station to TRADE

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-14 00:00:00 UTC
From: ekugrad@mindspring.com
Message-ID: <37b53b62.27514864@news.mindspring.com>
Source record: 80550
Cross-posted to: rec.radio.swap,alt.ham-radio.marketplace,rec.radio.amateur.boatanchors

I have an excellent condition TR-7 Station, that I would like to
trade.
The station consists of the following DRAKE equipment:

TR-7 Transceiver Serial # 8874 (Purchased 3/12/81 according to manual)

Noise Blanker
Filters: SL2300, SL1800, SL500, SL6000
PS-7 Matching Power Supply
RV-7 Matching Remote VFO
MS-7 Matching External Speaker
Drake 7 line Microphone (Astatic)
FA-7 Fan on the TR-7
Original manual for TR-7, NB-7A, Copy of manual for RV-7.
interconnecting
cables
Original Service Manual for the TR-7
Non-smoker
All pieces are clean and are in excellent working condition.

I am interested in trading the station for any of the following:
Collins S-Line, KWM-2A, 75A4
Kenwood TS-940S/at, TL-922A, TS-50/AT50, TS850S/at
Drake L-4B, Mint C-Line with Sherwood mods
Ten Tec Paragon, Omni V, Centaur amp
Yaesu FT-990,
Icom 761, 765,

As you can see, I am open to most trades. I want nice clean gear. No
junk
or problem radios. I'm looking for something to operate, not to
resale. I
am open to consider most trades. If you have a nice rig that I have
not
listed, let me know, I might be interested.

JPEG images and sales references if interested.
E-mail any questions to ekugrad@mindspring.com

Thanks and 73
David

>
Bob:

The 1629 differs from the 6E5 in that the 1629 has an octal base and a
12.6-volt heater. The 6E5 having a six-pin base and 6.3-volt heater.
Antique Electronics Supply <www.tubesandmore.com> has an adapter (part #
P-SA314) will allow you to use the 1629 in your radio.

For good, simple passive grid amplifier that works with any tetrode, go
to http://www.oceanfree.net/ei9gq.

In case I've got that wrong, just enter ei9gq into Alta Vista.

No complicated screen supplies. Circuit is based upon the G2DAF linear,
which was popular here in the '60s, using 813's.

Source record: 80560

Is the radio operated from 120ac with filament transformer, If so it is more likely that the tubes are 12L6s. Im sure you are aware that the 25 refers to 25 volt filament voltage. It is not likely that the receiver had two different tubes unless someone did some mods. the 25 volt variety would have been used in a series filament string for use with 120 vac and no transformer. take a volt meter and measure between pins 2 and 7 of the 12/25L6 tubes and that will tell you what voltage is being suppliet to the filaments. I suspect that someone put a 25L6 in the 12L6 socket and the tube isn't doing much because of low voltage. other tubes in the radio will also be a clue to the correct voltage. hope that helps. Dan

When I pickup this filter and rotate it to read the writing on the side the contents falls to gthe bottom side with a loud thud striking the case and when I return the filter to the upright position it again makes a loud thud. Ase the insides of this filter suppose to be loose or is it broke. If it is broke who repairs the filters??
Thanks for any help. I tried to post this to the collins site in tempe but the message kept coming back stating that the collins site did not exist. Would anyone have the proper address to get into the collins site.
Thanks de Mike.

hello DAn,
Well the slr-m is a ac-dc set with a series string as near as i can
tell the 12L6 is wrong and upsetting the series string voltages(the
fillaments are in parallel for the output tubes and the string is a
series parallel with a couple of resistors also.
I do not have a manual yet (it is on order from hi-manuals)
Im going to shop for tubes tomarrow at the hamfest and will have to get
both 12 and 25 volt tubes unless I can find out today.
Thanks,
Paul w0od

Not bad, however, the $300 to $400 shipping to the USA kinda rules out most bidders in my neck of the woods. It's a better deal for someone in Australia where the shipping is more within reason. What you bet someone will bid on it in the last minute and then back out because they didn't read the fine print. That happens all too often.

Pristine. Less than one year old. Out of box less than two weeks.
Absolutely as new and without a mark. One-owner/nonsmoker, SN 20m+ (one
of the last made). Includes YK-88SN SSB and YK-88CN CW filters, IC-10
computer chip, and very rare VS-1 voice synthesizer, all installed by
Kenwood-authorized-service.
Also SP-430 matching speaker, manual, original packing. Selling only
because I have used it less than 10 hours. A $1,450 value, will sell
for $650 + shipping. Price firm, no trades. Tks es 73, Jan N0JR

(This is a relisting; prospective buyer backed out because of impending
divorce.
If you contacted me before please do so again.)

>antique radio restoration. I would also like to know where I could get the
>service manual for the frame and the individual plug-ins.
>

Chuck,

The 5110 is a 2 MHz Oscilloscope Mainframe ($2895) 1991 prices.

5A21N - DC to 1 MHz Bandwidth
10 kHz Bandwidth Limiter
50 uV to 5 V/Div
100,000:1 CMRR
Current-Probe Input
5A21N ($895) 1991 prices

I think you mean 5B10 time base.
5B10N/5B12N - 100 ns to 5 s/div Sweep Rates
Alternate and Chopped Displays
Dual and delayed sweep (5B12N)
External horizontal amplifier
5B10N ($875) 1991 prices
5B12N ($1,795) 1991 prices

I just found a small reciever, listed as "Radio receiver, part of
radio receiver and transmitter BC-1306. Made by the Crosley Corporation.

Anybody have a schematic for this unit? It covers from 3.8 to 6.6 Mhz,
and uses 1.4V tubes.

Submitted for your consideration: A bunch of stuff from another time,
another place.

Things used to be different, what was common before is rare now.

Some of this stuff makes grown men tremble, and strong women shriek.

Only the brave seek out the rare, the unusual, the, what shall we say....
the bizarre?

If you dare, look at:

I came into possession of a very unique radio, and would like to know more about it and where I might find a schematic. Here are the details on it.
Model # 5BA34X/51
5 - Band LW, MW, 2 SW, FM Stereo
23" wide, 10" high, 10" deep
Dial is 4" x 23" and slopes down from the front top on an angle.
Dual speakers, end firing ,one from each end of the radio
CONTROLS:
On/Off - Vol
Tuning
Thumbwheel for balance
2 Thumbwheels, 1 for Treble, 1 for Bass
7 Large push buttons on front to change bands and inputs
2 small push buttons for Stereo/Mono and AFC
"Magic Eye" Tuning indicator
Control on front panel to rotate an internal AM dual ferrite loop antenna
It is all tube type
Made in Holland
The frequencies for each band are indicated in meters and mc/s
Any info on this would be appreciated, please email direct
By the way, it plays super on all bands, sounds great and is in real nice condition
Thanks
Tim

2099. Zenith Royal 2000 info?

Message-ID: <vVxt3.344$WR.40410@news.oh.voyager.net>
Source record: 80584

I recently got a Zenith Royal 2000 AM/FM All Transistor radio and would like to know more about it, such as when it was made, is it worth anything as a collectable radio? It is in pretty good condition and plays fine, but it must need dial string replacement and the dials do not move in sync any longer..anyone have a restringing diagram for it? IT does have the schematic on the back drop down cover though. IT appears to be internal battery only, as I can not find any external power connection.
thanks
Tim

From: Dee Almquist <w4pnt@rica.net>
Message-ID: <lcBt3.112$_b.11284@news21b.ispnews.com>
Source record: 80589

Hi Gang
I am presently refinishing Ranger-1 panels & cabs. I'm using a 2 part system, base coat, clear coat & epoxi ink for the screen. The end result is a superior finish compared to the original from the '50s. With the clearcoat over the screening, there is little chance of finger marks rubbing off the ink. The finish color is "right down the middle" of orig. color from factory. The refinish includes the panel, cabinet, beezel, & crystal knob if you have one. I'm using a very expensive paint system, one that will last & looks sharp! The price is $250. + shipping. I can do just the panel beezel for $195. + shipping.

Very soon I will be making available digital pics of my work both in attachments & on my webb page. I also have referances from those that have already had their cabs refinished.

i now have the makings of a few crystal cover knobs. I have to use original Johnson knobs off old equipment so they look original. Approx $20. ea

How many of you want your Valiant-1 refinished? Price will be around $285. set. (more complicated than a ranger).

How many would like your Hammar HQ-180 refinished?

Warm regards from a fellow AM'er

WTB:T-368 Need C-9 (PA Loading) for T-368 , 1500pf at 10,000 volts Vac. Variable Cap, Jennings part # UCSXF-1500 or physical and electrical equivalent. Will consider buying the whole RF deck, preferably complete and not disassembled, but, at least, with needed part is in place and undamaged. Also looking for complete (very thick) manual set for same and spinner knob for PA Loading control. What do you have?

Hi,
I'm in the process of restoring an SP-600 and need some info. The particular unit I'm doing has been modified for "diversity reception". It has 2 additional switches on the front panel to control the BFO and HFO. I need to know the exact text and colors for the switch positions so I can replicate it on my front panel. I know that the text is red on one side and white on the other. I've downloaded some pictures but can't read the text well enough.

I also need the red knobs for these switches. Any help is appreciated.

Thanks,
Tom W3TA

Hi Don,
Lynn N0ALO at n0alo@southwind.net will rescreen entire panels including artwork VERY reasonably. If he already has a screen for the rig in question it is even cheaper. He did my Gonset Comm IV and the result is beautiful- as good or better than new.

Tom:

The switch near the "BAND CHANGE" switch controls the HFO. The left position is labeled "EXT" in red and the right position is labeled "INT" in white. This switch has a label "HFO" in white directly above the knob. The switch near the "TUNING" knob is labeled "BFO-AVC" in white directly above the knob. This switch has 4 positions. From left to right they are: "EXT BFO SLOW" in red, "EXT BFO FAST" in red, "INT BFO SLOW" in white, and "INT BFO FAST" in white. This is the panel layout for the SP-600-JX-17 Diversity Model.

2151. removing Dymo label from painted metal cabinet?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-17 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <rrj90ffv3uk66@corp.supernews.com>
Source record: 80395
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

Does anyone have a tip for removing those plastic stick-on Dymo labels? I mean the kind that is a self-stick plastic strip with raised letters.

I just got a Hallicrafters S-20R that cleaned up very nicely -- except for a long label marked with a bunch of inventory numbers. The label is stuck on *very* securely, right along the top edge of the faceplate. The faceplate already shows minor peeling on the bottom edge, and I'm worried about tearing off a strip of paint if I peel off the label.

I may try soaking it with a cloth full of paint thinner to see if that loosens the glue. If someone has a better idea, please let me know.

Thanks!

There is a very active W.S. #19 group on the ham bands. We meet every
monday night on CW and every first Sunday of the month on voice. There
is also a number of web sites devoted to just the number 19. The weekend
before
regular field day is Vintage Field Day, where only vintage equipment takes
part.
This year there was even an attempt to work from 19 set to 19 set across the

pond (Atlantic Ocean). It was a success after many many attempts between
WF2U and LA5SMT. Considering the old number 19 only has approx. 10
watts output, and a very broad receiver, it is an impressive accomplishment.

Phil, I hate to say it but WD40 will dissolve the glue underneath.
"Patience" is the operative word when removing the label. Soak, set,
peel gently and repeat.
Good luck!

Plain ethyl alcohol works well for adhesive goo, even if the goo is
completely dried up.
In my experience, it is much less aggressive than GoofOff or Xylene
or acetone or other petrochemicals.

What's sold as rubbing alcohol is usually dilute isopropyl alcohol
and I've never had any luck with it.
I believe that denatured alcohol is mostly grain alcohol which has
been rendered undrinkable (and also not subject to booze tax) by
adding some nasty & unknown stuff to it. It is likely diluted as
well. Never had any luck with it either.

If your state allows the sale of it, look for 'Everclear' in a
liquor store - it is about 96% pure grain alcohol which is the upper
end of the scale as far as ethanol goes (the other 4% is mostly water
- real hard to get that last 4% out...).

In trying to remove old labels, start with the simple stuff then
work your way up the scale, like first:
- warm water & mild soap, then
- mineral spirits (or paint thinner or naptha), then
- ethyl alcohol, then
- acetone.

Obviously, big time fire hazard with the last three listed...

Also obviously, always best to try the solvent on a painted spot
that's hidden from view, to see if it'll dissolve or dull the paint.
A Q-Tip works well for this, and will show you if any of the paint
is coming off (white paint excepted, of course...).

The problem that you're going to have here is that any sort of solvent
that you use to soften the glue will not penetrate the label, and as
such you'll have to go at it from the edges to get underneath. If it
does attack the plastic, the chances are good that it will attack the
paint as well.

If it were me, I'd probably start by trying either Goo Gone or DeSolvIt
(both citrus-based "gummy" spot removers that you should be able to get
at any grocery or discount store)... neither of these should have any
effect on the paint, but should be able to soften the adhesive on the
underside of the label. You might have to start with one side, get a
small amount of it peeled up to expose the underside, and then just go
at it a fraction of an inch at a time (apply chemical, let sit, peel back
slightly, repeat). Take your time...

C.K.

This might help Phil

It is called UN-DU and it's an adhesive Remover. I bought it a year ago at ACO Hardware.I just removed a paper label from a 1900's Stetson hat box as well as magic marker -- believe it or not it removed the label and I am working on the green and blue magic marker. It dissipates so quickly that it will not even soak into the paper. If it removes a large paper label form cardboard it should do the trick for you without soaking into the finish. I am a Canadian so I don't get to Aco Hardware that often but the next time I do I'll buy a case of it. This is one product the works. It has quiet an stench and I don't think it says what the chemical composition is. But I think you'll be amazed. Please let us know how you make out.
Good Luck

Hi folks,

I have a brand new Hammond modulation transformer model 2310
that I need connection info for please.
I have contacted Hammond and they say they don't have a file on it.
It's too old. If you have an old catalog from the 40's- 60's and have
a moment to look up what the 12 terminals are, I would be very grateful.
Z ratio, power, pri/sec Z etc.

Thanks,

Paul

I got a couple of emails suggesting heat for this particular label (hair dryer, or heat gun using care not to harm the paint). I set the radio out in the sun for an hour and the label came off without much trouble. Paint thinner removed the few remaining dabs of glue, which were still soft from the sun's heat.

Thanks for all the other advice. More good stuff for my bag-o'-tricks file!

UN-DU is heptane.

I have found that it works as well as anything else, but it's not miraculous.
Usually the label comes off easily, but the glue is left behind, and
requires a lot of fussing to remove.

I just got a copy of the tech manual for the R390A from Fair Radio Sales. There are several pages missing, which on telephoning Fair Radio, the manual they have is also missing the pages. Does anyone have the pages 176, 177, 178, 179, 180 from TM-11-5820-358-35. I know that on one of these pages is Fig. 89 and possibly other text. Dale KC2PZ

2173. Kirby Scam Alert Update

Passing this along... D.S.

(Concerning the case of the Kirby fellow from Florida
that's been ripping people off)

The following message was received from Robert Luther,
the detective from Panama City, Florida handling the Kirby case:

"Please ask the people to whom you are talking to
provide me with a phone number so I can call and talk to them.
If you have any names or numbers please list them and
I will make contact.

If you can find out or tell me if any of the deals
were made over the radio or computer, such as,
did Mr. Kirby solicit any of the crimes committed
over the internet or by ham radio ?
If he did I need to know the call sign and or e-mail name used.

I have been in touch with the postal inspector and
they will start a case and work with me on this.
Once I have all of the original
mail that was sent I anticipate making
a quick arrest for the fraud.

Thanks, Robert Luther

Hi folks,

I am not a regular (or irregular) reader of this NG. Can someone help me with some basic info on a Hallicrafters R-96 A/SR Radio Receiver I picked up today? It is a military unit.

I'm an audio guy and do not normally delve into this airspace. Is there a non-military equivalent to this unit?

Please respond to me, rather than the NG.

Thanks,
Steve

2179. Re: removing Dymo label from painted metal cabinet?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-17 00:00:00 UTC
From: Lamb <k7fm@teleport.com>
Message-ID: <%oqu3.2131$272.85706@news1.teleport.com>
Source record: 80423
Cross-posted to: rec.antiques.radio+phono,rec.radio.amateur.boatanchors

One of the safest ways to remove labels can be used on a few pieces of equipment.

Remove the electronics and run the affected part under hot tap water. This will slowly remove the label and nothing else.

This obviously will not work in many cases. But, if you are cleaning up the cabinet anyway and have removed the electronics, it is one more good tool in the aresenal.

MSR 8000 covers ten 1.6 to 30 mhz frequency range in 100hz steps.
power output is 125 watts. Along with synthesized
selectable frequency operation, the MSR 8000 can be programmed
with up to ten preset simplex or semi-duplex channels.
Frequency, mode and channel numbers are indicated on front-panel
led digital displays, and both receiver and transmitter
frequencies can be verified without actual transmission. Te
memory retains programmed information even during extended
off periods. The MSR 8000 can be intergrated with other optional
components and used in complex communications systems.
Capabilites include the ability to interface with 1KW or higher
power inear amplifiers and with audio modems for radio
telepringing, facsimile or data transmission. Modes: lsb, usb
ame,cw, fsk, frequency stability: 1 x 10 -6 receiver sensitivity
ssb: 0.5micro volts, ame: 3micro volts (for 10dB(s+n)/n) channel
storage: 10 field programmable Power output: 125 pep and
average Power Supply: 12 or 24 vdc. This is one of the nicest MSR
8000s I've seen. I have misplaced the power cord. If I
find them, I'll include them. uses standard military power
cables.

Message-ID: <7pb5htgtn1@news.hawaii.edu>
Source record: 80469
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL

bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Subject: home wanted for worlds largest wilson cloud chamber
Date: Mon, 16 Aug 1999 13:45:08 +0100
Organization: University of Sheffield, Dept of Physics and Astronomy
Message-ID: <j.e.mcmillan-1608991345080001@mac007053.shef.ac.uk>
NNTP-Posting-Host: mac007053.shef.ac.uk
Lines: 33
Xref: reader2.news.rcn.net soc.history.science:15551
sci.physics:423507 sci.physics.accelerators:5008
sci.space.history:41489

The Wilson cloud chamber has a unique niche in the history of
modern physics because of the many important discoveries made using
this technique for making visible the tracks of fast particles.

This particular model consists of a large stainless steel framed
enclosure with toughened glass windows and a moveable piston
(1.5x1.8m)
at the rear. When expansion was triggered, the internal pressure of
the
gas filling caused the piston to move back rapidly. The resultant
cooling
of the gas was sufficient to give condensation of droplets on ions
left by
the charged particles. Stereo photographs of the tracks using high
intensity zenon flash tubes allowed the tracks to be studied in
considerable detail.

What is being offered now is the basic cloud chamber, weight 6 tonnes,
2m wide, 2.26m high and 2.6 overall depth front to back, including
piston,
expansion valve and holding magnet.

Professional video film is available to illustrate the scientific and
engineering aspects of the cloud chamber and showing it in operation
with tracks being formed.

Is there a museum or collector out there who is willing to save this
unique piece of scientific equipment from the scrapyard?
It offers great scope for a display of real scientific, engineering
and educational interest.

Unless you have direct experience dealing with someone it is best that you keep
your opinion to yourself. Considering the amount of people who read this board
a statement that is based on hearsay ("I was told") can be quite damaging.
What you said is false about Luc. He is one of the more` reputable people
selling items. If there is a problem he goes out of his way to make it right.
I know..... I have bought from him.

Want to buy old variable frequency holder. Frequency not important.

Looking to play around with, understand, appreciate and perhaps copy the variable frequency crystals seen advertised in old QST magazines. Have never seen one at local swap meet. Where did they all go to?

Would be interested even is crystal is broken or not working.

Thanks and 73, Colin K7FM

2208. Come on guys- Be a Hero

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-17 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <37B97146.B9F8DEBC@ix.netcom.com>
Source record: 80485
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

Come on, guys....
The group restoring the early configuration Corsair
in Meridian, Idaho* needs just one more piece to have
the radios complete. They need an MT-64/ARC-5
three receiver shock mount.

I *know* some of you reading this have one in a dusty corner.
"I'm going to get around to it," you think.
Yes-- I do the same thing. But you've been thinking that
for, how many years now? And I'm willing to trade for
some other shock mount or other thingy. I don't have everything
but I do have a lot of stuff out there in the landslide-
I mean garage.
Or if you just don't want to swap with me
because my feet stink or something,
talk to Al-- they're willing to pay a reasonable price.

Think of that small boy at the air show-
he might be your grandchild-
someday asking the pilot:
"Excuse me, sir. I'd sure like to see the old radios
in this airplane. My grandfather told me about them."
The pilot, with a sad and downcast expression, says:
"I'm sorry, son. Those ham fellows wouldn't sell us
the very, very last part we needed. So we couldn't
put them in. But we hope, some day, some really
great radio hero with a big heart will find us
that shock mount. Then you'll see a real
radio setup from your grand daddy's time!
You'll come back then, won't you?"
The boy, sad and disappointed but determined
and hopeful, purses his lips and says:
"You bet I will, sir! I just know one day
that great radio hero will help you!"
"That's the spirit!" the pilot says, and
salutes the young lad as he climbs into the
cockpit. The boy, remembering his gallant
grandfather, salutes back and thinks of
the day he'll shake that great radio person's hand.

So come one, guys. Be a hero.
Dust off that shock mount!

73 Dave AB5S

Source record: 80487

Plugged into two type 6D6 tube sockets along the right side of an RME 69 receiver that I recently purchased is a module containing four tubes and a coil. The module appears to have been manufactured around the time the receiver was made. It contains the following metal tubes; 6H6, 6J7, 6K7 and 6L7. The grid caps of the 6J7 and 6L7 are connected in parallel. Can anyone identify this accessory and/or modification and its purpose?

2224. Yaesu/Sommerkamp FR-100B/FL-100

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-18 00:00:00 UTC
From: Rupert Goodwins <rupert.go@bt-removethis-internet.com>
Message-ID: <7pf1ju$1pa$1@plutonium.btinternet.com>
Source record: 80351

Hi there...

I've got a Sommerkamp (Yaesu) FR-100B receiver and its matching transmitter (which isn't here, so can't tell the name. I think it's an FL-100). The rx works, kinda, but obviously needs some TLC with a soldering iron and 'scope. There's next to nothing on the Web about this sooo... has anyone got a circ? Is anything known about this ancient device? Was it really Yaesu's first HF rx? It looks old enough...

Rupert

Hi Dan,
I stuck up for Luc, and for my 2 cents worth, I would rather go to the ng and pay $30.00 for a salvageable NC57 than take my chances on the dreaded ebay and pay 75.00 for a very expensive question mark...
I didn't mean to slam the poster of the flame, just speak up for a trustworthy seller on the ng. I would definitely do it again.
rgds,
Mark S.

Hi All:
I have a good condition SW-3 in excellent condition. Tube set utilizes 76 series tubes. Small hole (that is plugged) near the rear. Unit is rock stable for a regen receiver from the '30's. Used to listen sideband on 75m with little or no drift. Comes with extra sets of new coil forms and military RA-133 power supply (small footprint) with homebrew rosewood stained base (looks really nice). Built in standby/on switch (from the factory) on power supply so you can send and receive your transmissions without overloading the front end. Power connector must be made for power supply (using tube style 4 prong socket). $250 plus shipping.

Announcing the Sixteenth Annual Odessa Texas Hamfest, sponsored by the West Texas ARC.
This year, as in the past, the Hamfest takes place on the 1st full weekend of November. This year, the fest is on November 6th & 7th. We expect over 2,000 in attendance over 2 days. Dealers come in from around the SouthWest.

We are one of the ONLY Hamfests that has ONLINE registration! You need not be present to win any of the major prizes, but must be present for the hourly door prizes. Over 200 tables should be filled as they were last year. Prices are reasonable & will remain so. We have hidden transmitter hunts & lots of fun. If you are planning on making a fest in the SouthWest this year, don't overlook this one!! Check out our website for more info on dealers, pictures from 1998, and prize info.

Check out our hamfest page at: http://www.wt5arc.org/hamfest/hamfest.html
Or, the main club page at: http://www.wt5arc.org
(where you will find the link for online registration)
Regular mailing flyers go in the mail in late September & if you are interested in receiving one, I need the mailing info by September 1st.
See you in November

I have for sale a Winged emblem Collins KWM-2 with the 516F-2 power supply. The 516F-2 has a built in speaker. I would rate this equipment CCA Good. The cabinets and trim rings have been repainted by me.... they were stripped and painted with enamal. Paint was mixed per spec's provide by the CCA. Excellent finishes, no runs, orange peel, etc. Base coat is more of a satan.... not as glossy as the originals. Chassis is dusty, would cleanup just fine.

Front panels are excellent..... electrical condition is very good. Asking $650 + shipping

Hi Dale.
The Missing pages that you called out are the schematic diagrams of the receiver.
If you have the schematics you have everything. If not I have a copy, not the best in the world but a readable copy of the schematics they are approx 81/2" by 22"
There are 5 pages. I could take them over to office depot and have them copied. Don't know what they will charge but it shouldn't be more that a couple of hundred bucks Hi Hi Hi.

2263. FS: Vintage transformers

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-19 00:00:00 UTC
From: Chimera Laboratories <chimera1@idt.net>
Message-ID: <7phndv$62c@nnrp1.farm.idt.net>
Source record: 80297

I am selling a lot of vintage transformers. Most of them are early Mil-Spec transformers that are potted and built to very rigid specifications.

I have my lists broken down into: chokes, filament/bias, input & interstage, isolation, output, plate HV, and power HV & Filament.

Email me and I can supply the lists.

If your browser and software will allow me to attach an excel file (472KB), I will send you a copy of the whole list.

If you are just interested in one category of the inventory, I can copy that portion of the file to the text in my email reply.

2265. National HRO Sr For Trade

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-19 00:00:00 UTC
From: David Stinson <arc5@ix.netcom.com>
Message-ID: <37BC691A.9F2EBAF9@ix.netcom.com>
Source record: 80299

HRO for Trade:

I have a 6-volt filament HRO Sr., Serial number 6X,
with three of the four coils (14.4-30 MC missing).
It needs to move in with someone who wants a good winter project.
Kinda sad right now- will need new paint and a good cleaning-
but can be brought back to life without concrete fill or welding ;-).

I'm interested in WW-II aircraft and ground infantry portable
radios and accessories. If you have an "ARC-5" type command
set or some accessories that are marked both
"Aircraft Radio Crop" AND "Signal Corps U.S. Army,"
that would be an instant "yes." I have multiples of all
the more common sets. Other trades negotiable.

2271. FS: Hickock 455A VOM

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-19 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <37bc9ee9@calwebnnrp>
Source record: 80305

For Sale: Hickock 455A VOM. This is an unusal bakelite cased VOM simular in capabilities to the Simpson 260 or Triplett 630 series units. But the construction is an order of magnitude nicer than either the Simpson or Triplett units. The design of the unit is also unique in that the meter is mounted on a sloping front with the range/mode switch above rather than below the meter movement. It has a basic 50 micoampere movement with voltage ranges from 0-3 vdc to 0-1200 VDC and the same voltage ranges for AC (Both 20,000 ohms per volt) DC current rages from 0-50 microamp, 0-1ma, 10 ma, 100 ma, 1000ma and 10 amperes. There is an overload protection relay inside the unit in addition to protective fuses. The case is extremely nice with very few scratches. There is a school name engraved on the bottom of the unit, but it was done nicely and is not visible when the unit is in operation. Unit has been checked against a standard Cell for DC accuracy on the bottom range. AC range checked at 115 vac. Unit will require fresh batteries. Complete with new Meuller probe set. JPEGS on request.

$75 post paid conus.

73,

Bob, KE6F

2272. need NC-190 antenna coil

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-19 00:00:00 UTC
From: Doug VL <swordman@netonecom.net>
Message-ID: <M72v3.14927$Ce7.263269@newscene.newscene.com>
Source record: 80306

A while ago I bought a National NC-190 at a hamfest. It's my second one. The first was stolen from my storage area while I was working out-of-state for a few years. I really wanted to replace it because of the calibrated SWL bandspread.

Howver, the replacement one turned out to be missing the antenna transformer for the lowest frequency band, AM Broadcast, which I also really would like to use.

Does anyone know of a source for parts, or have a junked one for sale?

How about information on making my own?

Thanks very much!

>Pick up in Simi Valley Ca. area
>

Mike,

I saw your ad for this on QTH.COM and you say "Johnson Viking MDL 1 AM/CW transmitter, plate modulated 6146's". What strikes me as strange about this tranmitter is that I thought that the Johnson Viking MDL 1 used a 4D32 in the final. Has yours been modified or did Johnson make some that way?

You probably have three terminals. The right one is for a ground. You can attach it to a ground or safely ignore it. Attach the middle antenna terminal to the ground terminal with a short jumper. Attach a piece of insulated wire (any length from 5 feet to 500 will provide decent reception) to the left antenna terminal. Don't join the two antenna terminals together! That would short the input and give you virtually no reception!

If you ever put up a dipole antenna, remove the jumper from the middle antenna terminal to right ground terminal and attach the two wires from the dipole lead-in to the left and middle antenna terminals (unless you use a coax lead-in--then I would leave the jumper on).

Hope all this helps. Cheers es 73. Harry, VE3GRO

It is for sale at Surplus Sales of Nebraska. Look at
http://www.surplussales.com and go for the Collins
pages. Not cheap but if you can't find it elsewhere...

You may try to get on on the Collins reflector.If you
are not already subscribed to the Collins reflector
you should consider it. To do so send an email to:
listserv@listserv.tempe.gov

leave the subject blank and in the body write
subscribe collins 'your name'

73
Heinz - KF6FNC

PS: I guess the KWM-380 does not fit into the boatanchor
newsgroup. I can't find no tubes in mine! ;-)

Source record: 80244

Hi Gordon:

Saw your post about "wanting to jump feet first" into old radios. Prepare yourself for some great times with the radios and you can expect to meet a bunch of great people who share your new interest.

You will get a number of helpful replies to your queries on the BA newsgroup.

As to resources, I'd suggest theat you check your local public library for editions of the Radio Amateur's Handbook, published by the American Radio Relay League. There are a number of ARRL pubs in addition to the Handbook that will give you a solid foundation on receiver principles, alignment and troubleshooting. While you're in that section of the library, nose around for books from other sources that may also be helpful. Especially check for the stuff that's over twenty years old - otherwise, you'll not get too much info on tube-type circuits.

Consider making your first boat anchor acquisition something relatively simple, yet classic. For example, you can find versions of the Hallicrafters S-38 series (manufactured between 1946 and 1961) very cheaply - $15 or $20 and up, depending on condition. It's a basic little receiver with great audio. It's also a piece of equipment that you can learn a great deal about boat anchor reviving that will stand you in good stead when you're ready to tackle something more complex. The '38 provides general coverage between .55 and 30 MHz as well as bandspread for several of the HF ham bands.

What you'll need:
>basic soldering equipment and some soldering (and desoldering) technique;
>the ability to read radio schematic diagrams;
> hand tools - screwdrivers, pliers, wire cutters, nut drivers, non-conducting (plastic) alignment tools
> an operation and technical maintenance manual for the specific radio you're working on. These are readily available for just about any rig you're likely to run across. Most of them contain step-by-step instuctions for troubleshooting and alignment.
> a volt-ohm-milliampmeter. Understanding and using a multimeter is a must.
> other electronic equipment you may want to consider depending on how serious you intend to get would include an oscilloscope and an RF generator.

That's enough for now. Let me hear how you're doing.

Ben,
Contact Jack at vtjack@juno.com
He knows where several are. At least one is an AN/WRR-2A. There is
also a manual which includes field change #1. This provides 0.5 kHz
step size. There is also an external IF notch filter for one of the
receivers. Try to get one made by National Co.This is one of the best
receivers that I have used.

I had a similar experience with Kenwood, East. The solved a long standing (since manufacture) problem with my radio, returned it promptly, and took care of it under warranty. All in all a great experience (and when I was all ready for a fight). It restored my faith in Kenwood.

2307. Re: How to do an alignment...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-20 00:00:00 UTC
From: Phil Nelson <nospam.philnelson@antiqueradio.org>
Message-ID: <rrs229cfmkf66@corp.supernews.com>
Source record: 80249

I strongly recommend getting a good book on repairing tube radios. It will cover basic procedures, tools, safety measures, etc. This web page lists some popular ones:

http://antiqueradio.org/bigbook.htm

Many other books were published during the 1940s and 1950s, which you may still find in a used book store, radio swap meet, etc. For instance, "Elements of Radio Servicing" by Marcus & Levy is a wonderful book, although not as beginner-level as some listed on the above web page.

If there is a radio collector club near you, you may be able to meet some knowledgeable folks willing to mentor you or offer occasional advice. This web page lists radio clubs all over the US:

http://www.antiqueradio.com/clublist.html

Starting with a simple radio is excellent advice. Keep in mind, however, that many of the simplest radios are five-tube "AC/DC" receivers which are more hazardous to work on than radios with a transformer power supply.

The FAQ for this newsgroup is another good source of information. It is published periodically in this newsgroup and also available on the WWW at:

http://antiqueradio.org/radfaq.htm

Hi,
I'm looking for the address or phone number/webpage of any crystal
supplier such as Peterson Radio. Specifically am looking for an FT-43
(I blelieve that is the type) for use in the Gonset Communicator series
of 2 meter transceivers. If anyone has any for sale (2 or 3) for the
144.4 two meter operating frequency I'd be interested in buying those.
Thanks and 73
Jack

Hello all,

Anyone have a Conar 500 receiver lying around gathering
dust? This is the matching reciever for the Conar 400
transmitter - a kit pair sold by NRI in the 1960's. I
have the transmitter, but I'd like the receiver to match
it.

If you have one for a reasonable price (it ain't a Collins!)
please email me with price and condition.

Thanks

In a day where questionable workmanship and a "we don't care" attitudes is all too common, it's nice to see a company strongly bucking this trend. I recently sent my Kenwood TS-530S transceiver to Kenwood Service Center East in Virginia. I have discussed the particular problems with my radio with both service managers Steve and Chuck. Both were extremely knowledgeable, courteous and helpful. (Chuck even took the time to offer me some technical insight on vacuum tubes and on some old Collins equipment I have.) They took my radio in promptly, informed of their findings and went the extra mile to make sure that my radio is in excellent working order. (The previous owner had apparently made some rather gross mods that were best removed.) I can honestly say, I've not dealt with a more professional, customer oriented company. They've certainly earned my business.

2330. FS Nice Drake C Line

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-20 00:00:00 UTC
From: Ron Manfredi <wa2eio@ibm.net>
Message-ID: <37BD83D9.465B2410@ibm.net>
Source record: 80332

Here is an excellent condition Drake C- Line! I am the 3rd owner, and the rigs have been well maintained:

T4X-C transmitter has 1974 Drake control/insp. tag on it. Full power on all bands.
Case has minor rub marks on it; front panel is like new. I would rate it a 9.

R4-C receiver is a later model with the 5 position filter switch. Includes the standard SSB filter, along with the 1.5 and .5 CW filters. Room for the AM and .250 CW filters also. Like the transmitter, cabinet is a 9, front panel like new.

MN-4 speaker cabinet about an 8.5. Not as nice as the rigs, but no deep scratches or dents. A steel-wool rubdown and re-paint would make it like new.

AC-4 Power supply working perfectly.

Also included are the manuals, labeled interconnecting coax cables for transceive operation, and a Turner 350 C mobile mic with rt. angle connector.

$600. plus shipping from NY (11566)

From: Everett Norton <cen75703@ptinet.net>
Message-ID: <37BDAB92.EEBBD82F@ptinet.net>
Source record: 80336

Hello all,
I recently bought two SBE-34s (S/N above 13000)
I have aligned both radios as per the service manual and have had one reoccuring problem with one of them:
Frequency stability is awful. I have replaced several caps and made all the factory updates and mods with some success. The VFO refuses to stabilize no matter how long the rig is left on and just a 5 degree temp change or a short transmission will cause it to drift. Do any of you have any suggestions about where I should look for the source of this problem? I did note that bringing my fingertip near the VFO cavity causes a drastic freq change.....I assume that I am adding inductance when I do this.....
I like the rigs and they would be neat for leaving at home so I can call the wife from the mobile but until I can get them stable they are not worth much to me.
Any help would be appreciated immensely,
Jim KY7DX
Montana

Jim,

I have had a couple of 34's myself and they are pretty nice little rigs
but they do drift some. There was an article in Electric Radio about
attempting to stabilize one using a fan and some other mods. I don't
remember how successful it was, but it seems that it was pretty good.
When you replaced the caps, did you replace with the equivalent
temperature coeficient rating? Most VFO's have both NPO and N750 or so
caps in them to compensate for temperature shifts during warmup. The
N750's or whatever negative temp co they used is critical for this
compensation. Also, you might check the stability of the voltage
powering the VFO. I don't remember if they used a zener regulator or
not, but if the voltage is moving around, the VFO freq. will drift with
it. What you need is stable supply voltage, stable VFO temperature
after warm-up and temperature compensation components working properly.

Good luck,

Rick

Source record: 80263

Test Equipment FS:

Keithley 169 Digital Multimeter, Lab type, but powered
by 6 "C" cells, so can be used in the field, if desired.
Nice large LCD display. $ 125

Heath low voltage power supply. It is the Heath IP-27. It is a
low voltage power supply, fully adjustable from about 0.5 Volts to 50
Volts. It also has current limiting that is built in and adjustable
from a couple ma up to 1.5 amps. There is also a nice large meter for
measuring current or voltage. The supply is "floating", so can be
used for either plus or minus supplies. It is the "Heath Brown"
color. Manual included. $100

Prices do not include shipping from Florida.

E-mail to W8EK@fdt.net

Thanks.

2352. Swap: Vintage Transoceanic for FRG-7

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-21 00:00:00 UTC
From: NZ8J <timcook@erinet.com>
Message-ID: <3zxv3.798$3j1.79325@news.oh.voyager.net>
Source record: 80267

HI,
I have a real nice Zenith Transoceanic shortwave radio that I would like to work out a trade for a Yaesu FRG-7. I have several "old" radios and would like a newer tabletop shortwave radio Here is the info on the Transoceanic which by the way I use daily:

Zenith Transoceanic Model G-500 (chassis 5G40)This radio plays super, I just replaced all tubes (including the 1L6) with new tubes. Alignment is great, 15MHZ WWV is stillright on. All bands are accurate. The old set of tubes still work and are included (including a 1L6 wich cost about $30). The radio is complete except for the ribbon cable to remote the wavemagnet and the manual. It does have the original folded paper with schematic, alignment instructions, dial cord restringing info, and tube placement. Page 72 of Harold Cones "Transoceanic" book says " The G-500 remained in production for 18 months, this very short life plus low production numbers makes the G-500 rarest of the post war tube type Transoceanics". The case is very clean, a few small scuffs, the plastic dial is not cracked, the antenna is clean and straight and has the retaining clip. The front cover latch is in good condition. There are no tears in the case cover. The chassis is clean and not corroded. Page 70 and 71 has pictures of the G-500 in Harold Cones book if you have access to that.

If you have any questions or want to make a trade offer, please email directly,
Thanks
Tim

Drake FS 4 with original manual. $375 plus shipping.

2354. FS: Knight T-150 / R100a Station

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-21 00:00:00 UTC
From: tubsc@aol.com
Message-ID: <19990821100228.13890.00001606@ng-cq1.aol.com>
Source record: 80269

I have a Knight T-150 / R100a combo that are surplus to my needs.
Both are in great cosmetic condition, but will require some work to put
on the air.
The R100a powers up but the main tuning dial doesnt rotate freely, I
havent looked at it, could be a simple fix. I also have the matching
speaker for this.
The T-150 is untested, it is complete and looks very sharp.
Also included is a matching Knight SWR meter.

Price is $150 for the whole package, I really dont want to split these up.
Shipping is extra.

Thanks!
Chris Krug KC5IIE
(TubsC@aol.com)

Source record: 80271

Sorry if this is the wrong newsgroup to post this in; I figured this is one of the few newsgroups where there just might be someone interested in this item.
WWII-era single cylinder 2 stroke Auxilliary Power Unit (APU), poor condition. Some engine parts missing, such as the carburetor. It is doubtful the motor could be made to run again, at least not without some very major repairs. It does have a nice 24V generator which doesn't look too bad. Was manufactured by Homelite.

Item can be seen at:
http://home.att.net/~vegetable.man/APU_1.jpg
http://home.att.net/~vegetable.man/APU_2.jpg
http://home.att.net/~vegetable.man/APU_3.jpg

This item is too heavy to ship, you will have to pick it up in person. We're about 20 miles east of Los Angeles.

If you are interested, please email me at:
rodger.eSPAM_SUCKS@worldnet.att.net
remove the letters in caps to respond; do not reply to this posting as the reply address has been altered for spam purposes.

> O How to do alignments on AM & FM

Aligning a simple Am radio is pretty easy ONCE YOUVE SCREWED UP A TIME OR TWO. Don't ask me how I learned this.

So I'd recommend getting a really wretched cheap AM radio and learning how to tune it up. If you totally goof up, and wreck the trimmers and coils, no big loss.

2358. FS: Valliant, HRO-50R1, Invader 200

2366. Emco Metal Lathe and accessories and more...

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-21 00:00:00 UTC
From: James Parsons <k5rov@earthlink.net>
Message-ID: <37BF4DAA.9B4F6838@earthlink.net>
Source record: 80281

I have an Emco Unimat-3 metal lathe complete with most accessories. I bought this new some years ago and became ill shortly after. I put some use on it but not much. I have kept it sprayed with WD-40.

Some attachments have not been used. The attachments include three jaw chuck, four jaw chuck, thread cutting attachment with three of the most HAM used followers (others available from retail outlets), milling table, faceplate, steady rest, taper turner, power feed attachment, vertical milling attachment, vertical fine feed attachment, dividing attachment, spare cutting tools, and more....

I also have the original manual and some applicable manuals. Also included is a vertical/horizontal metal cutting saw, Professional quality micrometer, combination square, inside and outside calipers, dial test indicator, dial vernier, and more...

I have three or four boxes of steel stock, aluminum stock, and there may be some brass stock also, but I have not looked.

I have 2200 dollars in the lathe and accessories alone. Of course, now they are used. My health will not allow use of these tools, so it is time to get rid of them.

I would like to work out a trade for an Icom 756, or I might sell. But here is the problem...it must be picked up only. Its small, but heavy when the stock is included. And, I would not be able to pack it. I live in San Angelo, Texas.

I have to go to the hospital every week for chemo, and may not answer right away. I am here on weekends but usually gone during the middle of the week.

Best 73,

Jim, K5ROV

Sounds like this is mainly a sellers boycot, or perhaps it will be a good
chance for buyers to pick up some bargins, if other buyers really do
boycot too.

What is the change in the reserve policy that has you all up in arms?

Regards,

John Byrns

I am clearing out the ham shack of all my QST magazines once again. If anyone is interested, I am selling 1992-1998 at $1.00 ea. (you pay shipping costs however you want them shipped) for 1 to 10 issues. If you are interested in over 10 issues or the entire collection, make me an offer. I am willing to ship anywhere on this planet so long as you are willing to pay the actual shipping costs.

Here are the issues that I have:

QST

1992 Jan - April $1.00 ea.
1993 Jan - Dec $1.00 ea.
1994 Jan - Dec $1.00 ea.
1995 Jan - Dec $1.00 ea.
1996 Jan - Dec $1.00 ea.
1997 Jan - Dec $1.00 ea.
1998 Jan - Dec $1.00 ea.
1999 Jan - Current $2.50 ea.

All the issues are in perfect condition with no ripped pages or covers. Sorry I don't have anymore, but the last time I did this in 1993, I sold all my 1989 through my 1992 issues less a few months still available.

Sounds like a good time to be a bidder :-)

eBay has started charging a dollar for reserve price auctions, and
your starting bid now has to be at least 25% of your reserve.

No doubt too many after the auction deals being made by sellers with
impossibly high reserves, cutting ebay out of their share.

Eric

Actually, the change in policy is troublesome and nuisance for sellers. I
suppose there's a good reason for it (?) but it is not a comforting
trend. I don't know anything about any boycott, but I set my reserve
prices reasonably to protect myself, and I find the change disturbing.

What is being forgotten is that eBay is providing a service and deserves to get paid for it. Any fees (past or current) have all been IMHO very reasonable. Keep in mind that all parties have the same intent... get the hammer down (make the sale) and move onto the next lot.

Credibility check: I have worked for a "REAL" auction house and have tallied bids for about a hundred live and mail auctions. Therefore, I've had to deal with both sides of the fence (dealer / buyer). I've sat just as many auctions held by other houses and know how they handle their business.

Most auction houses demand to handle ALL money and take their cut before forwarding the proceeds to the dealer. It is a very circumspect and tightly-knit business. All business details are overt, and in writing. Once you've lost a decent reputation (as buyer OR dealer)... screw you getting it back... no other houses will do business with you, period

I've watched many an eBay sale and listened to many folks carp about "inconvenience". eBay makes it very easy and should be paid for their work. This is not a game... eBay isn't doing this to be nice... it is a business.

Who the heck do you think your boycott'n. Like you realy beleive your gona effect EBay.
Yeah right! All your doing is thumb'n up your nose to your fellow Hams and Buyers.

Here's one of my old sayings again, "Don't curse the darkness, turn on a light".
IE: If you don't like EBay get the heck out and stop causing animosities between the community of HAMS and friends.

In other words, I agree with you, ebay is getting taken by
sellers setting reserves way high, then completing the deal anyway
under the table so to speak.
Cutting ebay out of their commission, that is not fair, no matter how
you may feel about eBay.

Eric

Gary - Why do you prefer the B Line ? I have a B Line and a R4C receiver. I find the R4B to have some of the best sounding audio ever coming out of a receiver, but I find the R4C to definetly be more selective. Just curious about what you think. --- Steve KK9ZZ

Greetings All,
I have two 4-400A`s that were part of an amplifier project. They have less than one hour on them. They have bright clear class (not amber tinted) and the Eimac red paint is bright red (not brownish). They are as new. I want $80 each shipped insured in CONUS.
Regards,
Earl Harris, K5FTE

I would like to see people move over to Amazon.com. They are smaller and try harder. They also do not discriminate against scanner sellers like e-bay. On e-bay many people sell items defined by e-bay as illegal and are allowed to do that. Other poor folks are singled out get their auctions pulled. Is this fair? Sounds more like grounds for class action lawsuit than a ban. Charging another $1.00 for a reserve auction is ridiculous, 25 cents sounds more in line. If you really want to get picky how can you even call a reserve price auction an auction. It isn't, it is a fancy way to advertise an item with a fixed price.

Oh well I have to go now and plan my upcoming e-bay auctions.

Rick B.

Maybe you can explain something to me, Grover, that I don't understand. Why bother with a reserve at all when you can use a minimum bid? I never use reserves, I just set the minimum bid at the least I am willing to accept for the item.
Vince

Hello and thanks for reading this post. I am in need of a manual for a National NC-46 receiver. I would prefer an original (yeah right!), but will take a copy. Of course I will pay all copying/shipping costs. I have an original HRO-50T1 manual in pretty good shape that I would trade for/towards the NC-46 manual. Thanks again, Markus

Well, I don't know about other sellers, but I try to use a touch of
psychology when I sell something on eBay. A reasonable opening bid
discourages frivolous bidders. A secret reserve encourages people to keep
bidding until they they reach the reserve, hoping it's low enough to still
be a bargain. Too high a reserve makes it not a bargain at all and annoys
bidders, IMHO. If the reserve is reached early enough in the bidding,
buyers will continue to compete and I make a little more than I expected
to. If other buyers are anything like me when I bid on an item myself,
there's an element of thrill and competition involved.

I had 2 different versions - one in the 17,000 range as I recall, and another around 24,000 - the basic difference between them was the later model had capability for 5 additional filters instead of the previous 3 (as I recall...)

Not particularly germaine to this thread, but I personally prefer the "B" line, after owning pretty much each letter designation at one time or another, and the B and C lines right next to each other on my bench...

From: "John D. Farr" <johnfarr@ro.com>
Message-ID: <7pqp85eks1@news.ro.com>
Source record: 80141

Hello. Thanks for reading this. I picked up a fine General Radio 1232-a Tuned Amplifier and Null Detector. It takes one or more "M72 Cells". This is a cylindrical cell that is larger in diameter than a standard "C" cell and smaller in diameter than a "D" cell. I have no intentions of trying to get any of these, but would like to know the voltage and length of a M72. With this info, I'll be able to determine how many it used from that, the voltage required by the amplifier.

Thanks
John D. Farr KC4ZXX

And not all of that on the fundamental, by any means... I remember causing a few, ahem, problems on VHF TV in the village with the 19 set I borrowed from the school cadet signals section. Lovely set, though, with its radioactive Cyrillic meter lettering, variometer that would happily tune the outer of my parents' TV aerial coax (hmmmm) and dynamotors that just sort of faded your carrier up rather than the oh-so-unrefined thunk-it's-there nonsense of all subsequent transmitters.

I asked the cadets whether I could buy it when I left. They told me that no, it had to be scrapped because it was well outside current radiological safety limits! Not that they were going to do it until the local Army had a spare HF set to replace it, though -- obviously they didn't mind irradiating generations of schoolkids *that* much. Shame. I'm sure it would survive EMP much better than most of the things that followed it.

What frequency and time is the voice net on? And is there any European equivalent?

Source record: 80148

I have a NC125 that is surplus to my needs. The radio works well however
it has a replacement knob on the main tuning which is very large. This
is the model with the select-o-ject built in, and it works very well. Meter
has crack in clear plastic but works well.
Price is $80 plus shipping
Thanks!
Chris Krug KC5IIE
(TubsC@aol.com)

2430. FS: Manual copies for TV-7D(*) Tube Tester

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-23 00:00:00 UTC
From: mc@sover.net
Message-ID: <37c1475a.11049949@news2.sover.net>
Source record: 80149

I will be making a copy of my 1960 original TM11-6625-274-12 for a friend. This is the Operators and Organizational Maintenance manual for the TV-7(*) series tube testers. It will be a high quality copy including the schematic and switch chart which is not found in the Operators manual. It is from the Depot Maintenance manual but I thought it would be good to include it.

I am willing to make more copies while I am at the copy center as I am there anyways with the manual so if you need a copy please e-mail me. Cost will be $12.00 mailed in the USA. I will mail overseas but the postage costs will be higher depending on where it will be mailed to.

Cordially,

Michael Crestohl
mc@sover.net

The new reserve price policy is great. From a buyer stand point I hate to see some high ticket item with a starting bid of $1 and some unknown reserve price. If you want a reserve price then make your starting bid that price. You get the same function as a reserve price auction. YOu get your minium price or no-sale, you give people an idea of what you want for the item and you dont waste my time. I hate it when some seller wants way to much money for an item and I waste my time bidding to find this out.

BINGO.... Now you know the reason. Sell a $10 item with a reseve of
$100. Generate a list of interested buyers, wait for close of auction
and email bidder direct. 1 listing, minimal cost.

Why bother then. You have a perfectly good media for selling ham radio items via netnews. Post it and go. Yet another auction/sell location just splits the places someone has to look.
FREE auctions, and what happens when you need to upgrade, faster network, must be nice to be wealthy and volunteer your network/hardware to the cause.

2436. Re: boatanchors RF signal generators

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-23 00:00:00 UTC
From: troglodite@aol.com
Message-ID: <19990823102649.24661.00002080@ng-ch1.aol.com>
Source record: 80155

>First, I measured 60VAC 60Hz between each of these units and the ground on
>the
>scope, is this normal, or should I float the scope? I did float the scope.

Most of the early RF generators that used 2 wire non-polarized AC cords had some kind of chassis to line bypass capacitor. This is what you are reading. If you do nothing else, replace this with a new capacitor, agency rated for this purpose. I'd also recommend at least a polarized cord.

>On every unit, the RF output did not look like a sine wave, in general, I saw
>a
>mix between a square, triangle, and some what sine wave. The freq did change
>with the dial setting and I could see modulation in the modulation switch
>position.

Again, most of the older service type generators were rich in harmonics. Some, such as the Precision E-200 series, even depended on the harmonics. Large amounts of feedback were used to guarantee the oscillator would keep working through the entire tuning range. This contributes to a harmonically rich signal. It generally wasn't a problem as far as the intended use.

>So where to start? Tubes are expensive now and the local RS no longer has
>the
>tube checkers. The units appear to be serviceable and the 314 is in near
>mint
>condition.

Start with the power supply. Replace the line cord and line bypass capacitor(s). Look for 120Hz ripple in the output, indicating an electrolytic replacement may be needed. Then, check the coupling capacitors for leakage, or just replace 'em all, there usually aren't that many.

There are lots of sources for parts and tubes, though generally the tubes are usually OK.

The frequency calibration on the old generators was not very accurate, so an inexpensive digital counter is a very useful accessory.

I fail to see anything significant between corporate greed and the greed of the buyers who hope to get something for less than what it's worth, or of the sellers who hope to sell the item higher (of the reserve price) than what it's worth. In my opinion *straight people* wouldn't play such games and sellers would simply list here on this newsgroup their items for the amount they want.

Concerning the ebay boycott, an excellent idea. As a buyer I've been boycotting them since day one :-) In general, I've found auction items usually more expensive than from individuals or dealers.

Likewise, I'm not troubled with revised policy on eBay. As a seller, I stopped using reserve prices some time ago because bidders tend to avoid items with a reserve. It can be frustrating to submit bids and find they aren't equal to the reserve price. Also, I see items listed where the current bid is about as much as I'd pay and yet the reserve hasn't been met.
If you believe in free market priciples setting prices through the law of supply and demand, then eBay prices are the only correct prices. I still find some bargains there like the new little Realistic amplifier I got for $20.

Well, technically, free market principles are predicated upon informed customers making rational choices. In the case of Ebay, there are plenty of instances of people getting caught in bidding frenzies... so it is debatable on whether or not Ebay prices are truly "correct" prices.

>
> No doubt too many after the auction deals being made by sellers with
> impossibly high reserves, cutting ebay out of their share.

If you think about it, the buyer pays the fee. The seller has to charge a littlemore to cover this NEW fee. How is that a good deal for anyone but eBay?

In the past, you could list an item at a lower starting price to drum up bidding action.
It's just psychology, once people start bidding they feel committed to winning
--
the thrill of the chase and all. I've been surprised at how that affects bidders.

So it's a little freedom taken away. Sometimes you may not even know if an item
will sell in that venue, so take a flyer, at a low starting bid (int the past). Now you
can't really afford to test the waters.

I don't think a boycott of eBay will do any good. But if someone could point me
to another decent auction company with lower fees, I would gladly try it. Ebay is
down half the time now anyway.....

Dear boatanchor luggers....

I need to replace several of the old paper capacitors in my Hallicrafters SX-28. These caps are covered with a gungy wax film, cylindrical and are manufactured by Sprague. What would be a good choice "modern" capacitor to replace these with?

Also, can you recommend a good source of the older style "spaghetti tube" sleeving

Kind regards,

Paul.

Check out the www.hallicrafters.org site. They have links to many of the vendors who sell restoration parts. The one I ordered from was Antique Electronic Supply. I got the old-style spaghetti tube and I used the Sprague Orange Drop capacitors. They can be found here:
http://www.tubesandmore.com
The Orange Drop capacitors I used are at:
http://www.tubesandmore.com/13201.html

Good luck,
Walter

Source record: 80183

Gordon,
That is good advice, to practice on something first before attempting
a major alignment on a prized posession.

Another thing to consider, get the proper tools. Attempting to adjust
ferrite slug with a tiny screwdriver usually results in chipping out the
adjustment slot or cracking the slug, not a good condition to be in. Or
using an allen wrench to adjust hex slugs can result in cracking them as
well.

And, if the slug doesen't turn with finger pressure, find out what is
sticking, don't get beefy and apply force. Ferrite is fragile, like
English bone china -- only more so.

Good luck with your education into a new world, and welcome aboard.
Denis

2471. boatanchors RF signal generators

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-23 00:00:00 UTC
From: pdrunen@aol.com
Message-ID: <19990822215452.00364.00004973@ng-cg1.aol.com>
Source record: 80236

Hi Group,

Just returned from the Huntsville AL Hamfest with three vintage type RF signal generators. I had one guy tell me his worked but did not, the other two, one was free and the other one the guy told me that he did not know. Anyway I have a few questions/problems,

First, I measured 60VAC 60Hz between each of these units and the ground on the scope, is this normal, or should I float the scope? I did float the scope.

The units are listed below:

ELCO Model 315
ELCO Model 324
Heathkit SG-8

On every unit, the RF output did not look like a sine wave, in general, I saw a mix between a square, triangle, and some what sine wave. The freq did change with the dial setting and I could see modulation in the modulation switch position.

This was done looking at the output with a 0'scope and setting up for RF output around 1 MHz.

I did get manual/schematics on the SG-8 and 314 but not on the 324.

So where to start? Tubes are expensive now and the local RS no longer has the tube checkers. The units appear to be serviceable and the 314 is in near mint condition.

The warrant card was dated '62.

Thanks!

Paul
KJ4UO

P.S. I also picked up a HP-608D in really good condition, it appears to have a good output but the modulation meter does not work, meter peds to the left and only moves to 20% at 100% modulation. Any suggestion?

I don't collect these things, just looking for a good bench type RF generator.

In normal SSB/CW use, I found the skirt selectivity of the B line to entirely adequate, and for AM or foreign broadcast, I prefer the B line - plus the fact that most of what are "accessories" in the C line are included in the B line.

Hi Everett,

I had an SBE-33 many years ago, and when even when it was new I noticed that they had not done a very good job of grounding components to the chassis.

SBE used rivets for grounding, and many times the rivets were not tight enough to create a good ground.

I would suggest you do some poking and prodding and see what you come up with.

I know just the operation you refer to. He is not the only one out there, but the constant hype and spam every other day is *incredible*.
Read some of his "ad copy" and it's amazing he sells anything, the way he oversells ("@@@ Has a volume knob!!!! Woweee!!@@@"; "75-A4 only $33.00 so far"; "Rare HW-101," etc.) and talks down to customers who by definition know what they are looking at.

Geez. The whole tube hobby seems to be going in the crapper.

Between the SPAMers and the SCAMers it's getting hairy. Like the
hobbyists is just a sucker for liking tubes.

FWIW, I have had excellent luck with eBay. Almost every tube product I
have bought has been okay. One or two losers, but overall, cheap, safe,
and no outright rip-offs to date.

Regards,
Dangerdave

EBay was going to change their policy on Reserve Auctions (add $1.00
to list a reserve, opening price must be at least 25% of the reserve,
etc). A lot of the sellers didn't like it and threatened a protest.
Since then eBay has been backing off on their original proposals.
Kinda moot point for me since I try to avoid using a reserve price
anyway.

Corporate greed, perhaps. But have you looked at the "other" internet auctions? Many, many items go with ZERO bids because sellers either start the bidding unrealistically high, or put a high reserve on the item. After all, an auction is not a retail outlet. It goes to the highest bidder, whatever the market will bring. At least eBay items almost always sell!

Vince, maybe I can add my 2 cents here -

Scenario - At a real auction, auctioneer holds up old radio. "Book
value" is say $100. Auctioneer prob. knows that. Seller would LIKE to
get book value, but won't settle for anything under $75. Auctioneer
asks for $75. bid. Neither you nor I nor anyone looking for a deal will

raise their hand. We think "what if I bid $75, and the highest anyone else in the room would go is $50?" So auctioneer DROPS the opening bid to $50. Still no bids. I will wait until I see at least one other person interested in it. What if there are no radio hounds here? I can get it for $20! Auctioneer again drops the opening bid, in increments, to $20. Now it IS a bargain, and I say heck, even if there aren't any other collectors here, I can't pass this up. But MANY hands go up at once. The cheepskates, like myself, drop out while the diehard collectors show themselves & the serious bidding begins. >

Bidding tops at $75. Thus, the value of THIS radio has been set at $75. and seller's reserve is met. High bidder is secure in knowing that there is SOMEONE who was ready to pay almost as much as he, so he feels (rightfully) that he really didn't pay TOO much.

You can tell I love live auctions too!

>
Try testing them using the ohmmeter function of a VOM or VTVM. Analog
voltmeters tend to be voltage-based (usually using a C cell) while digitals use
a constant-current source. A good selenium diode on a VTVM will show a very
low front-to-back ratio on the Rx1000 scale. That might sound strange if
you're used to silicon diodes--which may show about 600 ohms foreward-biased
and infinitiy reversed.

If a selenium diode shows up open on a VTVM, it probably is.

I'm sorry, but to be the same thing, the auctioner would have to say, "
there is a secret minimum bid on this and I can't sell it until you get to
it." I don't think you would be happy with that at all. I wouldn't.

I have just obtained a portable tube type Collins combination audio amplifier/2 channel mixer. The case has Model 60M-4 p/n 520-3760-00, the amp module is a 212Y Remote Amp and the mixer module is a 60H. The power connection is a 5 pin MS connector. It looks like the thing was designed for remote broadcast applications (maybe battery powered?). If anyone knows anything about this baby, I would be mighty grateful for some info. Anyone have a clue where I might obtain a manual or schematic? Thanks!

2502. Kenwood Nut Tools Almost Gone

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-24 00:00:00 UTC
From: DontDoIt@ImNotHere.com
Message-ID: <37c374e8.524068@news.mv.com>
Source record: 80105
Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi all;

The next (and last) batch of Kenwood "Nut Tools" has finally arrived. To those who've waited for me to ship yours, they are all going out TODAY, 8/24. Thank you for your patience!

I now have 3 final tools available for sale, and once they're gone, that's it, I'm going to call it quits.

So, for those of you who have a Kenwood or other rig that you've been trying to remove the silly round nut from the microphone jack, and want a better way than paying a Kenwood repair facility to do it for you, here's your last chance to get the right tool (from me, anyway).

Even if you DON'T need to remove it today, if your rig has a lithium battery inside the front panel, take my word for it, you WILL need to remove this nut eventually. If you're lucky, it won't be jack-hammer tight, and you can turn it (carefully!) with the tips of a needle-nose plier. Otherwise, you'll need this tool.

The deal: For $34 (money order or cashier's check, no cash please) I'll ship you your very own nut tool, to keep, to cherish, TO SHARE!!! If you don't like it, return it unharmed and I'll refund your money, less freight.

That's the best deal I got, and I ain't gonna get rich on this one, I do it simply to stick-it to the "establishment" that wants to charge upwards of $90 to loosen a nut. It's my hope that you will SHARE the tool with your fellow hams. To someone who finds themself (as I did) with a rig that has "lost its memory" and has a nut that's been tightened by a gorilla, you'll be an absolute HERO!

If you're interested you can contact me via mail, email, or phone:

Neil Rosenberg, N1DMA
NeilR@innermedia.com
60 Plain Road
Hollis, NH 03049
(603) 465-2788

The supply is VERY limited, and there are no more after this batch is gone, so act soon. Be sure to check with me before sending any money, to make sure I haven't run out!
==========
The fine print:

I have in my posession a tool that is positively brilliant at loosening/removing/tightening those annoying circular "nuts" that you'll find on various Kenwood rigs. Yes, you know the ones I mean, the ones that no amount of coaxing with the tip of a screwdriver will budge. I've been told (but haven't confirmed) that the same nuts are found on many Icom, Yaesu and other rigs.

Why on earth would you want to remove this nut, you ask? Well for most of the affected Kenwood rigs, it's the ONLY way to get to things like digital front panels, lithium batteries, and so on.

You can see a photo of the tool at:

http://www.mv.com/ipusers/innermedia/kenwood/spanner.jpg

Disclaimer:

I make absolutely NO warranty as to the applicability, performance, or safety involved in using the tool I send to you. If you damage your rig, or yourself, that is totally your responsibility. If you void your warranty, that's also your problem. THINK BEFORE YOU ACT!

If the tool is not as I described it, if you chicken out, or if it doesn't fit your rig, contact me, and I'll refund your entire price (less my UPS cost) as soon as the tool is returned to me undamaged. In other words, treat me fairly, and I'll return the same.

Neil, N1DMA

2503. WTD info onHallicrafters SX 122A

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-24 00:00:00 UTC
From: bobwilson <wilso_rk@uwlax.edu>
Message-ID: <7pu2c3$i90@wiscnews.wiscnet.net>
Source record: 80106

I've just recently purchased this SX 122A and was wondering if anyone had info on it like dates of manufacture. I don't have any manuals for it although it's in great shape. It has all the Hallicrafter labeled tubes in it. The only things wrong were 2 burnt out # 47 light bulbs and the previous owners engraved their name on it. Any info would appreciated. I'm trying to locate a manual too.

2504. Pictures of Kenwood Rigs

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-24 00:00:00 UTC
From: DontDoIt@ImNotHere.com
Message-ID: <37c38b60.6277523@news.mv.com>

Cross-posted to: rec.radio.swap,rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave

To those who've not visited my Kenwood Pix site, here's the scoop:

(Ages ago) I was shopping for a used Kenwood rig, and didn't have a clue what an 850 versus a 440 versus etc. looked like, and Kenwood "ain't tellin". They only list information on their newest rigs.

So, I started a collection of pictures of many of their "classic" rigs, and put it up on a web site for all to use. It's still there, and you are all welcomed to visit. It's strictly not-for-profit.

The site address is:

http://www.firstname.com/kenwood

And, if you've got a better picture than one I've put up, or a picture of a rig that I don't have, please email it to me and I'll place it on the site.

Best regards;

Paul,

I did it again, hit the wrong button. Please ignore previous message with quote but no content.

I am in the middle of a similar project. You should seriously consider replacing ALL the wax caps in the RF section. The technique is outlined on this web site:
http://www.exit109.com/~jimh/hallicrafters.shtml
As for the spagetti tubing, drop me your address and I'll send you more than enough to do the job - no charge.

Doug Moore

Hi Paul:
You wrote:
>I need to replace several of the old paper capacitors in my Hallicrafters
>SX-28.

I recapped my '28A recently with "Dipped Polyester, Radial-lead Film" caps I found inthe TechAmerica catalog.

They are working well and have the added bonuses that they're inexpensive and much smaller than the original caps.

Due to the size difference in the caps, I found that leftover insulating spaghetti from the original components was ample for replacement.

Have fun replacing some of the buried ones, especially if your rig is a '28, rather than a '28A

Carter Cook

2509. Question on Auto-Mate K5/50 Electronic Keyer Kit

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-24 00:00:00 UTC
From: "Dr. Edward H. Scissons" <psa@sk.sympatico.ca>
Message-ID: <v5xw3.195$Ctq.6029425@tomcat.sk.sympatico.ca>
Source record: 80112

I have recently acquired an Auto-Mate K5/50 Electronic Keyer Kit. It was assembled by a perfectionist and seems to work perfectly. I understand that this keyer was designed and sold by Ben Woodruff of Chicago in the1960's and is very similar to the a Hallicrafters product.

The sidetone in this keyer is more of a buzz than a tone (at least when put through standard stereo headphones). Is this normal? I would appreciate hearing from someone else who has used this keyer.

Thanks.

Ed Scissons

Hi Bob:

You wrote
>I've just recently purchased this SX 122A and was wondering if anyone had
>info on it like dates of manufacture.

According to Dachis' Radios by Hallicrafters, the SX-122A dates from 1967-69.
It sold new for $395. Dachis says the differece between an SX-122 and the A
model was the optional 100kHz calibrator.

Another ham bites the dust and you're the friends stuck with
liquidating the radio debris. In cataloging the loot, you come
across a hand made radio. Rather than ponder, "what are we gonna
do with this old homebrew thing", send me some mail and tell me about
it. DON'T toss it in the trash. DON't toss notes or parts that may
pertain either. Don't want to let old Bob in on the action? Please
post your find to the boatanchors group. There are a number of us
who are nut-so enough to be messing with this stuff and you'll be
sure to find someone who will appreciate the ours a late friend
put into the project. Got a whole basement full of stuff and no
time to mess with it. Have 28,000lb lift gate truck and will travel!!!

I bought a SB-614 monitor scope recently and it has a frequency
counter installed - no documentation was included with the scope and I
can't find any sign of who the maker of the counter was, but I don't
think it was part of the original kit.

Anyone know who made such an aftermarket frequency counter kit for the
SB-614 or was this a Heathkit extra?

Any info would be appreciated.

I concur with the use of the "orange drop" type caps. They are a bit larger and cost a few cents more, but I don't like their operating parameters and, thus, don't choose to use them. The Antique Radio catalog gives a brief dissertation on this. Also, on my '28, getting to the caps in the RF box is a real bear!!! Looks like this is SX-28 Re-build Month!!! Good luck to all

I have just obtained a fascinating Marine HF receiver....labeled Lagier, with French markings. Probably not Canadian, so France is obvious source. Tube unit with tuning-eye and lights to indicate band in use.
What happened to Lagier? Where were they located?
Anybody have a book on this rare radio?
73s
Matt

No kidding on that! Does anyone have a good procedure for getting to the buried caps that are in the first section (as you move back from the rear of the rx)? It looks like you almost have to disassemble the entire compartment to get to those caps . .

The procedure outlined on the SX-28 page doesn't seem to be for the non-A model (or am I reading it wrong)?

thanks,

Joe W9TXU

Thanks very much for your comments....I'll replace them all (!!!) and go with Mylar / Orange drops depending upon cost roll up... There sure are a lot of caps in there!
Another question.. there is a long thin component pop riveted to underside chassis wall connected to the s-meter adjustment pot... it has three terminals, 4" long. it looks like a sparsely populated terminal strip but I know it can't be... What the heck is it?

Kind regards,

Paul.

2550. Suggestions re tube tester?

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-25 00:00:00 UTC
From: dgf@netcom.com
Message-ID: <7pvgej$nb4@dfw-ixnews10.ix.netcom.com>
Source record: 80055

I've been spending more time playing with older gear using tubes, and it seems having something to test tubes would help me weed out the many tubes I have in boxes that probably aren't actually new, but were put there by some past person just to have container for used tubes. The tubes in question are garden variety receiving tubes of the 6BA6, 6GK6, etc etc etc types that are found in my various older rigs.

So anyway the questions are:

1. Would a tube tester help me identify and discard tubes that are bad?

2. Are tube tester indications generally a good indication of how a tube will perform in service?

3. If these are true, what kind of tube testers are recommended?

4. Where do I find these things?

73 Dave WB0GAZ dgf@netcom.com

2551. For sale: Tubes, New $0.50 to $2.00 each!

Somebody was looking for Nuvistors? I have 2- 6CW4's and 3- 6DS4's that were used a long time ago in some homebrewed 2M equipment, all working when last used.

I can't guarantee their condition now because I have no way of testing them, but if you're up to taking a chance, I'll ship all 5, plus 3 sockets, for $40.

Greetings.

I am looking for a schematic of the Heathkit IM-25 multi meter.
I have checked various Heath boat anchor web sites with no luck.
Is there any one out there than can point me in the right direction.

SHURE Model 514B Omnidirectional Dynamic Microphone, Low Z, Push-to-Talk Switch. This mic has a 1.5 meter XLR coiled cable attached, and ready for use. NEW, NEVER BEEN USED, (purchased as talkback mic but never installed). Frequency Response 100 to 6,000 Hz. The 514B provides a tailored frequency response for smooth, clear voice articulation. It's compact styling makes the 514B perfect for applications where an unobtrusive, comfortable-to-hold microphone is required. This mic lists for $80. I have 2 of these, and my price is $40.00 & $5 priority mail shipping ea.

This remote amp was A/C powered, and was used for
general purposed remote broadcasts, such as Church
and Sports remotes. Input is for professional 150 ohm
balanced mikes, output is +4db, 600 ohm line impedance.
We used one for many, many , years at WHDF, Houghton,
MI. (Still have the metal case, on angled brackets).

Turn your caps lock off, it looks like you are screaming.

There is no such thing as a stock 8KC filter. The AM filter is a 3Kc
and I once saw a 6Kc filter which would mechanically fit the receiver
but not electrically.

The optional filter for the 'A-3 is a CW filter. I beleive it was
500KC.

2592. WTB-book "wireless sets f

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-26 00:00:00 UTC
From: Joe.Nicholson.@f211.n1000.z52.warpgate.com
Message-ID: <76f_9908270644@warpgate.com>
Source record: 79897

Jeff <dupuisj@nortelnetworks.com> wrote and asked:

> anyone heard or have this book.

What book Jeff? You and most posters in NG's
don't seem to realize that many readers have a
limit on the number of characters in a header.

Here is how your message looked and the reason
it was useless to a lot of us:

Subj: WTB-book "wireless sets f

I may have hundreds of books and tons of old
electronic equipment and parts (I started in
1947 as a hobbiest before employment in the
trade), but if a poster is too lazy to place
his needs/requirements __IN__ the message, I
am not going to know what the hell he wants.

I've passed up dozens and dozens of requests
for schematics because the end of the Subj:
line was cut off and a brand/model wasn't
repeated in the message. Ditto for tubes
and books and other parts and information.

As far as Seleniums go, "that smell" is a fairly toxic gas, and should be absolutely avoided. Only reliable way to do that is to use a silicon replacement. But...

One other comment about seleniums, is that they have a higher voltage drop than silicon diodes. I replace any selenium as a matter of priority, but I do it by first measuring the actual DC voltage produced. Then, if necessary, I use an appropriate resistor along with a silicon diode(s).

Of course, if it's dead to start with, you just have to guess, based on whatever knowledge you have about the output DC.

Subject: Ever seen a Collins 212Y amp or 60H mixer?

This remote amp was A/C powered, and was used for
general purposed remote broadcasts, such as Church
and Sports remotes. Input is for professional 150 ohm
balanced mikes, output is +4db, 600 ohm line impedance.
We used one for many, many , years at WHDF, Houghton,
MI. (Still have the metal case, on angled brackets).

Subject: IM-25 diagram neded

Greetings.

I am looking for a schematic of the Heathkit IM-25 multi meter.
I have checked various Heath boat anchor web sites with no luck.
Is there any one out there than can point me in the right direction.

2603. FS: Kenwood TS-700SP 2m All Mode Rig

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-26 00:00:00 UTC
From: David Little <dalite01@sprynet.com>
Message-ID: <7q3b3daii1@nntp3.atl.mindspring.net>
Source record: 80009
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.swap

Kenwood TS-700SP 2M All-Mode Transceiver
144.000 to 148.0000 MHz in 4 bands of 1 MHz
USB, LSB, CW, AM, FM
SSB, FM, CW: 10 Watts Output
AM: 4 Watts Output

All solid state

Built-in frequency counter provides direct
frequency display precise to 100 Hz for
internal VFO, External VFO or fixed crystal
operation. 7 digit resolution.

110 VAC or 12 VDC operation

Repeater operation - Normal, Reverse or Off
provides 600 Khz shift up, down or simplex

Dual Vernier Tuning provides bandspread tuning of 25 KHz
per turn on one control with 100 KHz per turn on other.

11 fixed frequency crystal positions provide for fixed
frequency operation operation on 44 fixed channels (11
on each band)

Noise Blanker, All-Mode Squelch, RF Gain, Automatic AGC switching,
RIT, VOX Gain and delay, built-in speaker.

Built In VOX, Receiver Preamp,

Remote VFO Operation, Semi-break-in CW with Sidetone, Low Power
(1 Watt) switchable from front panel)

Rig comes with AC power cord, DC power cord, MC-30S Hand Mic with
switchable noice-canceling for mobile operation.

Cosmetics - very good for age; minor scratches.

11 crystals installed in fix board; 2 are dead
(14X.520, 14X.700, 14X.730, 14X.760, 14X.850,
14X.880, 14X.925, 14X.940-Dead, 14X.180,
14X.195, 14X.???-Dead and Unmarked

note 14X refers to 144, 145, 146 or 147; dependent on
1 MHz section of band selected.

Operating Manual with 4-page fold out schematic included.

Rig has not been used much in the past 5 years; other than for
occaisional packet and monitoring repeater. I used it mobile in
a mini-van with a SQLoop omni-horizontal mobile antenna for mobile
sideband opeation for approximately 1 year. I removed the mini 4-pin
din jack (external DTMF Pad Option) from the rear panel to install a
mini bat-handle toggle switch to allow internal speaker monitoring
when external speaker jack is feeding TNC for packet. Notes on schematic
indicate previous owner performed squelch hysteresis modification
(I think this is outlined in the Kenwood service flashes on their
site and various Mod files around the net)

$ 200.00 + shipping from Postal Code 31523

Image file of rig scanned from manual available vis email - 500K file

Thanks For Reading

All-Mode eh? So how much power does it output in double sideband suppressed carrier mode, single sideband with carrier mode, vesgital sideband with suppresed and no carrier mode, fast scan video mode, digital video mode?

:All solid state

There's a term you don't see often.

:Built-in frequency counter provides direct
:frequency display precise to 100 Hz for
:internal VFO, External VFO or fixed crystal
:operation. 7 digit resolution.
:
:110 VAC or 12 VDC operation

110 volts is only used in backwards countries.

Barry

>
>I have a NO Tune CE 600L. It is a 8.5 and clean. 160-10 No Tuning.
>What is this worth? 73 Chris

Hard to say. The 600L was designed to work with the 10B or 20A so it takes very little drive. A common problem, I've heard, is that people hook them up to a 100 watt rig and sometimes forget to adjust the input to the 600L and drive them too hard. So, the big question is how well does it work as well as how it looks.

Another big issue, as I'm sure you have noticed by now, is shipping is just about out of the question due to the weight. So the value is determined by how much someone local will pay.

I have a 600L that I got in a package deal, so I can't really say how much I paid for mine. I have had Nick Tusa fix it up, so I have put more money into it than it's worth because there were many problems with mine. But, they are a bit of history and for some strange reason, I still think it was worth it even though I know I will never be able to sell it for what I have had to put into it.

VARIACS FOR SALE

These are some of the best variable transformers you will find
anywhere.

SUPERIOR (NEW / Panel Mount) 0-140/280V for 120V AC IN
or 0-240 for 220V AC in. At 3.5 Amps $70.00

SUPERIOR (NEW / Bench Mount) 0-140/280V for 120V AC IN
or 0-240 for 220V AC in. At 3.5 Amps $125.00

= = = = =

Used - open frame variacs - front panel mount:

0-120V at 3A $42.00

0-140V at 2.5A $42.00

0-120V at 1.75A $38.00

0-120V at 2.25A $40.00

0-120V at 4.5A $75.00

0-120V at 7A $80.00

0-120V at 7A $90.00 (QTY 2)

0-280V at 3.5A $130.00

= = = = =

TENMA 0-130V AC at 10 Amps Variac NEW w/1 yr warranty. Has ammeter,
3-prong cord and socket. Current: 10A, 1.3KVA.
Fuse: 10A AGC (included). $160.00

KRM (NEW/Bench Mount, in beautiful case with meter and switch)
0-120V AC at 18 Amps $245.00

STACO J401 Panel Mount (used, tested, open frame) Isolated 0-140V AC
at 4 Amps Dimensions 6" X 6" X 5" deep. Front has 4 mounting holes on
4.75" centers.
This is a heavier Variac. 24# $75.00

STACO Panel Mount (used) 0-140V AC at 20 Amps $160.00

SUPERIOR Panel Mt. (used) 0-120V AC at 20 Amps $135.00

SUPERIOR Bench Mount (Used) 0-120V AC at 15 Amps $140.00

POWESTAT Panel Mount (Used) 0-280V AC at 9 Amps $135.00

NOTE: All Variacs listed above are NON-ISOLATED AUTOTRANSFORMERS
unless otherwise stated.

Polyphase & LARGE variacs available. Other sizes available - inquire.

Example:
0-140V at 42 Amps (5000 Watts) $330.00

0-140V at 60 Amps (8500 Watts) $360.00

= = = = =

2615. FS: SP-600-J

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-26 00:00:00 UTC
From: anchor@coastalnet.COM
Message-ID: <3.0.5.32.19990826110831.0088e670@mail2.coastalnet.com>
Source record: 80021

This Hammarlund SP-600-J receiver has been recapped, ALL the Black Beauties and Gray/tan Uglies have been replaced. The electrolytic filter cap has been replaced, and several resistors have been also, when found to be off value.
It is clean, no bends, dings, etc. No corrosion. Some chips on the panel. Works well.
A manual copy is included. Also the FM adapter (don't know if it works).
I am a non-smoker.
Price is $300, plus packing/shipping. It's heavy, manual says 66 lbs. I won't pack it myself, but will supervise MailBoxes, or another of your choice. I will be at the Shelby, NC, 'fest Fri. & Sat. next week, 9/3-4, and could take it.
Additional info available, please email direct to anchor@coastalnet.com for info, questions, wants.

2616. FS: HQ-180AX, HX-50A, HXL-1 pkg

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-26 00:00:00 UTC
From: anchor@coastalnet.COM
Message-ID: <3.0.5.32.19990826110856.00888730@mail2.coastalnet.com>
Source record: 80022

Hammarlund "Triplets", HQ-180AX, HX-50A, HXL-1
Overall cosmetics--front panels close to new looking. I have repainted all 3 cabinets, the bezel around the panels have some paint scrapes. All chassis had no corrosion, I've cleaned them all.
The HQ-180AX - has the fixed freq. xtal option, 6 sockets on the front panel, 5 inside. It's a nice "band cruiser", with ham band bandspread.
The HX-50A - has had all elecrolytics replaced by me. I made a tuning chart, showing 60w out on 160, and 80-95 true out on the other bands, into a 50 ohm dummy load. I get good reports on the sound from it.
The HXL-1 - The HX-50A drove it to a true 600w output on 20m, with 1015w inp, and did similarly on the other bands. I did put 100-110w in, and saw close to 1kw out.
They do come with original manuals and all connecting cables. All relaying is internal.
I really don't relish the idea of shipping these, unless professionally packed, with supervision.
Price is $900, plus packing/shipping. I will pack myself, if you pay my material costs, or will supervise MailBoxes, or another of your choice. I will be at the Shelby, NC, 'fest Fri. & Sat. next week, 9/3-4, and could take them. or - I will be travelling to MA the week after, and could meet some one along the way.
Additional info available, please email direct to anchor@coastalnet.com for info, questions, wants.

For Sale: Kenwood SP230 speaker with filters - Matches the
TS-530 and TS-830. This SP230 is labeled "TRIO" -- my reason
for selling is that I found one with the "Kenwood" label on it to
better match my Kenwood transceiver.
The SP230 is in excellent physical & operational condition
but has a 1/4" nick on the front right side of the bezel.
$75 money order -- shipped CONUS.
Please email direct --> jhardin@hal-pc.org

For Sale:

Fine Electrolytic Can capacitors - ideal for repairing tube radios and audio amplifiers and other applications:

SPRAGUE ELECTROLYTIC CAN CAPACITORS, BRAND NEW, IN THE BOX (M)

20 uF at 450V DC, plus 50 uF at 250V DC, 3.5"X 1.3" (QTY 11) only $8.00 each

80 uF at 450V DC, plus 10 uF at 400V DC, plus 40 uF at 300V DC, plus 30 uF at 300V DC all in one can! 3.5"X 1.3" (QTY 7) only $9.00 each (SOLD 3 - only 4 left!)

20 uF at 450V DC, plus 500 uF at 25V DC, plus 500 uF at 25V DC in one can, 2.25" X 1.3" (QTY 1) only $6.00

= = = = =

40 uF at 450V DC, plus 40 uF at 450V DC, plus 20 uF at 450V DC MALLORY type FP
Electrolytic Can Capacitor, NEW, no box. 3" X 1.3" (QTY 1)(M) only $8.00

= = = = =

Single nut mount can capacitors 4.5" X 1.3"
25 uF at 450V DC Electrolytic Capacitors, good used (QTY 3)(M) only $3.00 each!

FP style Electrolytic Can Capacitors 3.5" X 1.3"
40 uF plus 40uF at 500V DC in FP can, good used (QTY 2) (M) only $4.00 each!

New special B+ High Voltage Capacitors:

150 uF at 200V DC (QTY 1) $5.00

150 uF at 300V DC (QTY 2) $6.00 each

150 uF at 350V DC (QTY 4) $8.00 each

185 uF at 300V DC (QTY 4) $7.50 each

300 uF at 250V DC (QTY 1) $7.00

330 uF at 385V DC Philips PC mount cans (QTY 40) $8.00 each

590 uF at 200V DC (QTY 2) $5.00 each

850 uF at 200V DC (QTY 16) $9.00 each

2200 uF at 450V DC (QTY 7) $15.00 each

2400 uF at 450V DC (QTY 9) $16.00 each

= = = = =

New oil-filled high voltage capacitors (NO PCBs)

0.5 uF at 3000V DC $10.00

0.5 uF at 2000V DC $9.00

0.25 uF at 2000V DC $7.50

1.0 uF at 2000V DC $10.00

= = = = =

Electrolytic Capacitors for HV Power Supplies:

12 uF at 1000V DC $22.00

100 uF at 1000V DC $50.00

= = = = =

FP Can electrolytic capacitors, new.(S)

40 uF at 450V DC (Mallory) (QTY 4) (S) $6.00 each

80 uF at 400 V DC plus 80 uF at 200 V DC (Qty 2) $8.00 each

= = = = =

Mallory Electrolytic Can Capacitors, Metal can, NEW (S)

160 uF at 350V plus 10 uF at 350V DC . . . . . $7.50 each
or 4 for $27.00

10 uf at 450V plus 10 uF at 450V DC (small can) . . . . $6.00 each
or 4 for $21.00

= = = = =

PHILCO ELECTROLYTIC CAN CAPACITORS, BRAND NEW (S)

100 uF at 350V DC, plus 500 uF at 50V DC, plus 500 uF at 25 V DC
and 200uF at 25V DC all in one FP style can. $6.00 (QTY 2 available)

= = = = =

Add shipping cost to all prices.

Source record: 80032

The Ten-Tec 229 tuner is a 160-10 meter 2KW PEP tuner with built-in balun. A rotary inductor allows prcise match. Built in power/swr meter. Bypass or select from 4 antennas with built in switch. Comes with the original manual. Gray/black color will match most current rigs. Excellent condition $225 shipped conus.

The Heath 2040 2 KW tuner also has a rotary inductor for a precise match on all bands 80-10 meters. Built in balun. In like-new condition. This unit has a professionally done switch mod to allow it to be bypassed or to select from 3 different antennas/dummy load combinations. Original assembly manual is included. $130 shipped conus.

2638. need help: knight-kit power transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-27 00:00:00 UTC
From: thomasjay2065@my-deja.com
Message-ID: <7q6k9u$to5$1@nnrp1.deja.com>
Source record: 79902

I am the proud owner of a knight-kit KG400 (stereo amplifier). My best guess is that I need to replace the power transformer (blew fuse, when fuse was replaced the transformer sounds to be frying eggs). I have the original manual and specs (with votage traces), but it isn't enough to find a suitable replacement. Need help with source (hammond?), and exact replacement.

2639. Need Hallicrafter FPM-300 part

Newsgroup: rec.radio.amateur.boatanchors
Date: 1999-08-27 00:00:00 UTC
From: Dale Traughber <dtraughb.do.not@spam.ameritech.net>
Message-ID: <37C659B4.770@spam.ameritech.net>
Source record: 79903

I am posting this for a friend of mine that doesn't have usenet access.

He recently purchased a FPM-300 (ssb/cw transceiver circa 1972) and found that the toothed belt that operates the band change switch is worn beyond repair and needs to be replaced.

I have checked my sources, and so far have not found any source.

If anyone might have such part, know of a suitable replacement, or can steer us in the right direction, we would appreciate the assistance.

You can reply directly to him, "B.J.Baum" k9swr2@juno.com, or to me, or to the group, I will be checking.

Sorry about the spam-guard, but this is my "post only" machine and the spam-bots alraedy bit me once. Remove to reply.

We are both current in the book should you need adresses.

Thanks in advance.

From: Charles Hugg <chashugg@earthlink.net>
Subject: BC348Q FS

I have for sale a nice BC-348Q receiver. It has a 120 volt power supply installed in place of the original 28 volt supply and a speaker installed in the top of the cabinet. Otherwise, it is original and looks very good. It works great on all bands and all controls work. All knobs are original. Front panel is good and shows very little wear. I am asking $135 plus shipping. Sorry, I don't have the manual. Charlie, K5MBX

Subject: Central Electronics 600L HF Amp

In article <37C51280.1A36@ix.netcom.com>, ck5@ix.netcom.com says...
>
>I have a NO Tune CE 600L. It is a 8.5 and clean. 160-10 No Tuning.
>What is this worth? 73 Chris

Hard to say. The 600L was designed to work with the 10B or 20A so it takes very
little drive. A common problem, I've heard, is that people hook them up to a 100
watt rig and sometimes forget to adjust the input to the 600L and drive them too
hard. So, the big question is how well does it work as well as how it looks.

Another big issue, as I'm sure you have noticed by now, is shipping is just about
out of the question due to the weight. So the value is determined by how much
someone local will pay.

I have a 600L that I got in a package deal, so I can't really say how much I paid
for mine. I have had Nick Tusa fix it up, so I have put more money into it than
it's worth because there were many problems with mine. But, they are a bit of
history and for some strange reason, I still think it was worth it even though I
know I will never be able to sell it for what I have had to put into it.

From: "CommQuart" <commquart@erols.com>
Subject: checking selenium rectifiers

Seleniums fail with age, regardless of usage. They will develop
reverse leakage, and also more voltage drop as they age.
Better to replace with a modern silicon component, and compensate
for any increased voltages with a dropping resistor.

From: anchor@coastalnet.COM (Al Parker)
Subject: FS: HQ-180AX, HX-50A, HXL-1 pkg

Hammarlund "Triplets", HQ-180AX, HX-50A, HXL-1
Overall cosmetics--front panels close to new looking. I have repainted all 3 cabinets, the bezel around the panels have some paint scrapes. All
chassis had no corrosion, I've cleaned them all.
The HQ-180AX - has the fixed freq. xtal option, 6 sockets on the front panel, 5 inside. It's a nice "band cruiser", with ham band bandspread.
The HX-50A - has had all elecrolytics replaced by me. I made a tuning chart, showing 60w out on 160, and 80-95 true out on the other bands, into
a 50 ohm dummy load. I get good reports on the sound from it.
The HXL-1 - The HX-50A drove it to a true 600w output on 20m, with 1015w
inp, and did similarly on the other bands. I did put 100-110w in, and saw
close to 1kw out.
They do come with original manuals and all connecting cables. All relaying is internal.
I really don't relish the idea of shipping these, unless professionally packed, with supervision.
Price is $900, plus packing/shipping. I will pack myself, if you pay my
material costs, or will supervise MailBoxes, or another of your choice. I
will be at the Shelby, NC, 'fest Fri. & Sat. next week, 9/3-4, and could take them. or - I will be travelling to MA the week after, and could meet
some one along the way.
Additional info available, please email direct to anchor@coastalnet.com for info, questions, wants.

Subject: FS: Rockwell Collins KWM-380 - CCA Excellent condition!

I'm posting this for my friend Bob, KX6K. Please respond directly to
him at
the phone number or email address below....thanks.

For Sale: Rockwell Collins KWM-380 - CCA Excellent condition!

Comes with service bulletins updates including the rare and difficult to
find
receiver audio low pass filter. This unit also has a full compliment of
filters including the 1.7KHz narrow SSB, 360Hz and 140Hz CW filters. A
Kiron
memory board, keypad interface, noise blanker option and original manual
(compelte binder) completes the package.

This unit is clean! Dirt and Dust free, no scratches. It simply looks
great!
The two main power supply capacitors have been replaced as over the
years the
originals were outgassing. Performance is simply surperb. Simply
classic
Collins.

Asking price is $3300 plus shipping.

From: anchor@coastalnet.COM (Al Parker)
Subject: FS: SP-600-J

This Hammarlund SP-600-J receiver has been recapped, ALL the Black Beauties and Gray/tan Uglies have been replaced. The electrolytic filter
cap has been replaced, and several resistors have been also, when found to
be off value.
It is clean, no bends, dings, etc. No corrosion. Some chips on the panel. Works well.
A manual copy is included. Also the FM adapter (don't know if it works).
I am a non-smoker.
Price is $300, plus packing/shipping. It's heavy, manual says 66 lbs. I
won't pack it myself, but will supervise MailBoxes, or another of your choice. I will be at the Shelby, NC, 'fest Fri. & Sat. next week, 9/3-4,
and could take it.
Additional info available, please email direct to anchor@coastalnet.com for info, questions, wants.

That would be a voltage divider consisting of R31 and R32. R31 is
11K, 1-1/2 watt and R32 is 4K, 7 watt. Part #24A046.

Turn your caps lock off, it looks like you are screaming.

There is no such thing as a stock 8KC filter. The AM filter is a 3Kc
and I once saw a 6Kc filter which would mechanically fit the receiver
but not electrically.

The optional filter for the 'A-3 is a CW filter. I beleive it was
500KC.

From: mcREMOVE@sover.net
Message-ID: <37c691f5.7429867@news2.sover.net>
Source record: 79908

This is a nice compact antenna tuner from the KWT-6 transmitter. It is very light and extremely well built. Uses a combination of fixed and variable capacitances along with a nice roller inductor. Front panel has the same multi-turn knob as the KWM-1. Is rated conservatively at 100 Watts Carrier (AM/CW key down) which translates to about 175 Watts SSB.

The cabinet has been repainted (black), feet have been added and a ground post has been mounted in a spare hole on the rear panel. These mods are 100% reversable if desired.

Price is $150.00 plus UPS. If interested please reply by e-mail.

73,

Michael Crestohl
mc@sover.net

F455J-80 is the 8KC Bandwidth, 455KC IF mechanical filter that will
fit the 75A4 (both electrically and mechanically)

F455J-60 is the 6KC version. There's also a -40 (4KC), -31 (3.1KC),
-21, etc. etc.

Most are rare and expensive. You can make the (much cheaper) 455KC IF
filters from the R390A work just fine with a little creativity.

I do a small radio restoration column for a "popular" non-ham
SWL/Scanner orientated magazine. After offering some simple projects, I've
noticed a fantastic response from the readers; but, I am slowly
realizing that the median age of most people I hear from falls
between 65 and 72! It's interesting when you receive long, handwritten
letters
from Old-Timers, but never even an email from someone younger showing an
interest in the old technologies or proper restoration techniques.....

I am wondering if anyone under the age of 50 is building radios anymore, or
is the "magic" of building a one-tube regenerative receiver using a 30 or
'99
tube reserved just for those of us with AARP membership. I am feeling
kind of sad, because more than a few old timers have sent me the
remains of their junkboxes because no one else is interested; and they
didn't
have the heart to take the stuff to the dump. (Nothing special, old sockets,
resistors, coils, etc.)

I am wondering, are we really the

Last American Dinosaurs

2658. FS: Kenwood SP-230 $75 shipped

Have a nice Watkins Johnson 8718A for sale or trade.
For a description of the rig, go to: http://www.fairradio.com/
(see Ostermans Book, page 430 for additional details as well)
This rig has 1 hz VFO option. And some very tight filtering to go along with
it.
.1Khz/ .3Khz/ 1.0 Khz/ 3.2 Khz and 16 Khz. This rig is SUPER stable.
I have complete WJ original manuals, for the receiver and the Supplement for
this particular model. NOT MANUAL COPIES. For additional details contact me via
Email. Will consider trades, another high end receiver?. THANKS

My dad, who's 79, got a computer last year. I never could get him interested in ham radio, but he's taken to NetMeeting like the proverbial duck to water. He doesn't keep track of the countries he's talked to but I know he's well on his way to 100. He learned Morse in the service but never liked it, and I sure wouldn't let him listen to some of the going's on on the HF ham bands. He talks to a lot of young people, who seem to appreciate his mature opinions. I doubt they could carry on the same level of conversation on the ham bands--for one thing, NetMeeting is full duplex, and he has a camera, too.
